biased rectifier amplifier DC current detector for DC to DC constant current converter 87−22568
bidirectional convertor flux imbalances 88−75846
bidirectional DC to DC converter for uninterruptible power supplies *(German)* 88−62442
bidirectional HF DC-DC converter, boost topology, control behaviour anal. 88−75794
bilateral DC to AC convertor using a high frequency link, uninterrupted power supply appl. 87−22520
bilateral HF converter for UPS 86−45570
bilinear lossless switched networks, sliding modes, energy transfers between dynamic storage elements 87−73264
biomedical battery operated equipment, split power rails, design alternatives 86−50460
bipolar, SIT 100-kHz step-up convertor for sinusoidal line current rectification 85−10017
bipolar continuously variable output switched mode power converter, high stability 88−69563
bipolar power transistor modules for power converter 85−11008
bipolar transistor power switches, low-loss, steady-state and dynamic characts. 85−61087
board mounted DC to DC convertors in distributed power systems, thermal considerations 87−65849
board-mounted DC/DC converters, reliability, design performance 87−72300
boiler feed pumps, converter-fed synchronous motor as high speed drive 86−66372
Bonneville Power Administration transmission system with line-commutated convertor as inductive load 87−78069
boost and buck converters, inductor coupled, anal. and design *(Chinese)* 87−73313
boost zero-current-switching resonant DC/DC converter, steady state operation 88−75840
boost-buck DC-DC convertor in optimal topology, computer-aided anal. 88−37297
bridge, up to 800 volts DC and 100 kW power range, transistorised units, appls. 85−39112
bridge convertor, six-pulse, control strategy suitable for microcomputers 87−58177
bridge convertor phase currents harmonic composition, influence of control-pulse balancing 86−45522
bridge convertors, reverse conduction phenomena in bipolar transistors 88−30929
bridge rectifier with input filter, open-loop instability 86−45580
bridge static converter, rotating coordinate axes, calc. between rectified and AC voltages *(Russian)* 87−64700
bridge thyristor convertor, asymmetric regimes due to pulse-phase control system malfunction 87−64690
bridge-leg power convertors, interactive switching 88−75825
bridge-type, two-phase short circuit currents in AC network determ. *(Slovak)* 86−61594
Broken Hill mines 50/40 Hz frequency convertorstation 86−12905
brushless DC-drive system, torque pulsation estimation due to convertor and inventor behaviour 85−53873
brushless permanent magnet motor drives, high-speed torque control method 88−75976
buck converter, current mode controlled, effects of coupled output chokes on loop dynamics 87−22563
buck convertors, current mode, state-space model using SPICE package 88−55499
buck zero-voltage-switching resonant DC/DC converter, anal. and design 87−44586
buck-boost converter with capacitive coupling 88−5776
buck-boost converter with nondissipative LC turn-off snubber, fundamental characts. 88−55457
buck-boost switching cct., characteristics of DC-to-DC converters operatingin current programmed mode *(Japanese)* 86−67031
buck-type switching regulator, controller design method satisfying time domain specifications 87−72354
buck/boost convertor, known as Cuk-convertor, circuit parameters and characts. *(German)* 85−60305
buck/boost PWM power convertors, control selection for max. perform. 88−75764
Budapest suburban railway, past, present and future of electrification and power equipment *(Hungarian)* 88−24239
BZD 412 power supply circuit with booster converter *(Croatian)* 87−507
C-dump unipolar power convertor for variable reluctance motor drives, develop 86−45560
CAD for optimal project costing 88−55500
CAD of microprocessor controlled circuits for power convertors 86−33525
CAD tool. nonlinear design optimisation for power convertor components *(Chinese)* 87−73308
CAE design, IBM PC based system, requirements 87−72295
CAE of half-bridge convertor for SMPS 88−30930
Cambridge ring, power supply system *(Chinese)* 88−18915
capacitive converter supplying power to HV plasma-arc loads, EM processes anal. *(Russian)* 88−24047
capacitive-storage power station, charging-discharge convertor with capacitive store system, emergency power supply 87−64830
capacitor and controlled switch nonlinear reactive elements 87−64683
capacitor bank charger using HF link resonant circuit for sonar appls. 86−7946
capacitor self-excited induction generators, voltage regulation and design 86−33406
cascade drive with sequential control and microcomputer signal processing 87−22595
cascade switch in series-resonant inverters 87−72306
CASIS, inverter output voltage form control algorithm synthesis system 88−55515
cement works electrical equipment, Brown Boveri process control and power electronics systems 86−26457
central station advanced power conditioning technology,utility interface, and performance 85−53631
charge-discharge converter with capacitive store, energy characteristics *(Russian)* 86−61590
choke volume reduction related to working frequency 86−45476
chopper circuit for speed control driving 500 W motor off 24 V battery 86−7929
chopper power supplies with interlaced structs. *(French)* 87−36961

power convertors continued
chopper power supply, 10 kW output, supply from 380-440 V industrial networks *(French)* 87−36962
circuit for wind and small river energies *(Russian)* 88−69497
circuits for motor drives using GTO thyristors and power transistors *(German)* 86−45503
circulating current control based on the decoupling theory 85−32594
circulating current dual convertor for DC separately excited motor drives 86−56825
clamped mode resonant convertors operating at constant freq. 87−78795
clamped-mode parallel-resonant convertor, state-plane anal. 88−24991
Class D power convertors using power MOSFETs 88−75805
class E 220 V converter using BIPMOS cascode cct. *(French)* 86−12887
class E converter, 220 V, 500 kHz using BIMOS 88−5765
class E power amplification and conversion using oscillator switch *(German)* 87−31691
class E power convertor, efficiency improvements 87−22577
class-E regulated DC/DC convertors, small-signal dynamic anal. 85−6168
closed loop regulated switching mode systems, accelerated convergence to steady-state soln. 87−73322
closed-loop converter controlled DC drive, stability, Lyapunov's second method 88−31062
CMOS DC-DC convertor cct., 60 V PWM remote power controller for ISDN appls. 88−56440
cold strip rolling mill electric drives, subsystems and controls 85−44329
Cologne district heating plant circulating pump replacement *(German)* 86−39533
combination with machine, bond graph model 87−43284
common mode filter inductor analysis for power converter noise reduction 86−54319
communication power engineering, computerised power plant control and supervision *(Polish)* 87−9668
communication satellite HF DC-DC convertor development and testing 86−39949
commutating angle changes due to three-phase short-circuit *(Slovak)* 86−19367
commutation, circuit arrangements and operating features *(French)* 86−20764
commutation in DC machines fed by static convertors, series excitation current ripples study 88−17642
commutation range extension of power convertor for induction generator 86−39965
commutatorless series motor, performance anal. of steady state behaviour 87−16103
compact DTO thyristor convertor construction and characteristics *(German)* 85−60327
compatible power distribution and convertor system CAD experiences 88−5347
compensated *(Russian)* 87−43188
compensated 12-phase power convertor with transformer-reactor *(Russian)* 85−65320
compensated multiphase power convertors, circuit and charact. computer aided anal. *(Russian)* 85−65321
compensation convertor difference equations for steady state and transient processes calc. 87−4802
complex load effect on asymmetric short-circuit currents in 1 kV plant *(Russian)* 86−39100
computer power supply with 200 kHz high power DC to DC converter 87−30814
computer-aided design of power electronic systems 86−747
computerised, hardware implementation of a multimicro configurationfor application to power electronic systems control 86−33524
concentrated energy flux devices, power source investig. 88−37291
conducted interference voltage of AC-DC converters calc. 87−22567

DC-DC and DC-AC convertors, function-by-function comparison *(French)* 86−47031
DC-DC boost convertors, transient response anal. using alternor eqns. 88−18907
DC-DC buck converter, function control appl. 88−75752
DC-DC buck-boost convertor, anal. of transient and steady-state processes 88−18909
DC-DC chopper converter *(French)* 87−44558
DC-DC Class E resonant converter regulated under fixed switching freq., steady state anal. 88−70521
DC-DC converter, magnetic amplifier controlled, control characts. 88−75754
DC-DC converter analysis methods *(Korean)* 88−49049
DC-DC converter chips, appetite curbed using CMOS 86−20252
DC-DC converter circuit design for two-wire digital subscriber loops *(Japanese)* 87−31711
DC-DC converter in overcurrent limiting mode dynamic characts. 88−75753
DC-DC converter technology breakthrough 88−56431
DC-DC converter with magnetic amplifiers, multioutput design 85−44074
DC-DC converters, mag. components in switching regulators 87−22524
DC-DC converters, state variable anal. 88−36607
DC-DC converters design, CMOS appl. *(Dutch)* 87−4781
dC-DC converters with series commutation 88−75795

power convertors continued
DC-DC convertor, 24 V/12 V, design and operation, video terminal appl. *(Spanish)* 85−6163
DC-DC convertor, comparison between square-wave and quasi-resonant topologies 87−44573
DC-DC convertor, const. current type, anal. of DC current detector *(Japanese)* 88−56464
DC-DC convertor, coupled-inductor step-down switching, small-signal anal. 87−30818
DC-DC convertor, design using switching voltage regulator LH 1605 *(German)* 85−6151
DC-DC convertor, digitally controlled, output characts. *(Japanese)* 85−44867
DC-DC convertor, inductor-transformer resonant, steady-state anal. and design optimisation 88−30919
DC-DC convertor, MAX 630 from Maxim *(Italian)* 87−36973
DC-DC convertor, power dissipation from switching device *(Japanese)* 86−33520
DC-DC convertor, practical switch based state-space modelling 88−18929
DC-DC convertor, push-pull current fed type, stability aspects *(Korean)* 86−730
DC-DC convertor control design with transfer functions associated to higher order Volterra kernels 87−58214
DC-DC convertor for voltage regulation over wide range 88−24992
DC-DC convertor in dual-in-line packaging *(Spanish)* 85−6137
DC-DC convertor switching power supplies, config. and characts., mobile equipment appls. *(German)* 85−39091
DC-DC convertor using bipolar power transistor, high speed turn-off by small saturable core 86−67017
DC-DC convertor using HF invertor link with Bi-MOS devices 88−24990
DC-DC convertor using PWM IC, design and characts. *(German)* 85−39907
DC-DC convertor with current feedback and core saturation, high-speed switching of power transistor *(Japanese)* 86−33519
DC-DC convertor with current limiting/surge protection, −48/+5 V, MXB.2 data multiplexer appl. *(German)* 88−17734
DC-DC convertor with GTO, effective turn-off by small saturable core 87−36979
DC-DC convertor with GTO controlled by extremely small core 87−4799
DC-DC convertor with high frequency AC link 86−51748
DC-DC convertor with single GTO thyristor as power switch *(French)* 86−51768
DC-DC convertor with voltage resonant switching mode, anal. and design *(Japanese)* 88−18925
DC-DC convertor with zero output current ripple *(Japanese)* 87−11014
DC-DC convertors, forward type using peak current control technique, parallel operation *(Japanese)* 88−12216
DC-DC convertors, highly efficient for rechargeable Li cells 87−30817
DC-DC convertors, parasitic capacitance effect on small signal frequency response 87−22587
DC-DC convertors, product features 87−9643
DC-DC convertors, series/parallel connection, signal indicators and burn-in *(German)* 88−11284
DC-DC convertors, sliding model control 86−51786
DC-DC convertors, switching type, computer-aided design-oriented anal. 87−59149
DC-DC convertors for low consumption cct. appls. *(Italian)* 88−70504
DC-DC convertors in current-programmed mode, unified topological modelling 88−24994
DC-DC convertors in discontinuous MMF mode, power train parasitic capacitance effect on dynamic perform. 87−36978
DC-DC convertors in hysteretic current mode, frequency stabilisation 87−22585
DC-DC convertors regulation and performance modelling 88−69570
DC-DC convertors using feedforward of output current and input voltage, dynamic regulation 86−67018
DC-DC convertors with nonideal switching, state-space modeling 88−43292
DC-DC convertors with two outputs, full regulation with one switch 87−15911
DC-DC double forward flyback convertor with power transistor 88−70550
DC-DC double forward-flyback converter 88−70526
DC-DC flyback convertor, Siliconix Si 9100 single-chip device using D/CMOS technology *(Italian)* 88−18904
DC-DC half-bridge resonant convertor for LV power supply topology comparison 87−44574
DC-DC HF half-bridge resonant MOSFET converter 88−70524
DC-DC invertor chopper control by programmed microprocessor 87−43085
DC-DC isolated output convertors, appl. of thick film technology 87−10685
DC-DC modified series resonant convertor 87−22576
DC-DC multiple-output converters, stability anal., systematic method 87−22564
DC-DC power converter circuit CAD, dynamic investigation *(Hungarian)* 86−7933
DC-DC power convertor, double resonant circuit 88−37310
DC-DC power convertors, Class E, operation and expt. results at 1.5 MHz 86−52663
DC-DC power convertors, Class E, small signal dynamic anal. 86−52664
DC-DC power convertors, LPS series, PWM control, design and characts. *(French)* 88−62458
DC-DC push-pull convertor, dynamic characts. 86−51755
DC-DC PWM converters, topological constraints 88−70529
DC-DC quasi-resonant convertors for switched mode power supplies 87−16882
DC-DC resonant convertor tolerance to transfer nonidealities, resonant topologies in HVDC engng. 87−51377
DC-DC resonant convertors, output voltage regulation using variable-reactance ccts. *(Japanese)* 88−18924
DC-DC resonant convertors for electronic power supplies, state of the art *(Japanese)* 88−18922
DC-DC resonant convertors for resonant switch mode power supplies, anal. and modelling 87−15910
DC-DC resonant power convertors, single transistor ccts. *(Spanish)* 88−5779
DC-DC series resonant convertor, small-signal model 85−60308
DC-DC series-resonance high-frequency convertors, resonance current calc. 88−55439
DC-DC single switch dual output converter 88−70528
DC-DC SMPS, noise suppression and stability in overcurrent limited mode *(Japanese)* 88−12212
DC-DC solid-state, universal input, fixed output convertor 87−65846

power convertors continued

forward convertor using magnetic amplifier, loss estimation *(Chinese)* 87−73311
forward DC to DC converters, backward noise generation 88−5766
forward DC-to-DC convertor, backward noise generation *(Japanese)* 86−66160
forward DC-to-DC convertor, surge and noise generation 86−20269
forward type convertor, 100 kHz config. using ETD bipolar power transistors *(Italian)* 88−26212
four quadrant three pulse transistor rectifier 85−27540
four-quadrant power converters for locomotives, DDC 88−69860
FREDFET, new power MOSFET with fast-recovery internal inverse diode 85−6978
frequency characteristics of multivalued nonlinear convertors 87−59151
frequency controlled converter with linear conductance in AC circuit 86−33481
frequency spectrum method for voltage mode PWM converters, modelling, digital simulation and anal. 86−45574
FS-400M optical submarine transmission system, power feeder 86−30823
FTU power supply system, final design 87−72284
Fuji GTO thyristors for power convertor appls., characts. and ratings 88−71538
full-bridge series-resonant power converter with bipolar power flow for motor drives, anal. 88−69781
full-wave convertor, current transformer for voltage feedback *(Russian)* 88−55469
full-wave voltage convertor with AC magnetic storage, land characts. *(Russian)* 87−30759
functional anal. concepts appl. to inverter fed induction machines 88−69569
G-form and single-phase bridge inductive-capacitive converters, subharmonic oscillations *(Russian)* 87−78780
G-pulse bridge convertors, current controlled, with DC ripple, line harmonics 88−30916
gate turn-off thyristor application *(German)* 86−2143
gate turn-off thyristors, cct. appl. 86−6889
gate-turnoff thyristors, series connection 88−5783
generator end ring material P 900, vibration corrosion cracking and crack growth *(German)* 88−37199
generator-convertor-receiver static convertor system, minimum phase response *(French)* 85−16126
Gezhouba-Shanghai HVDC transmission project, China, thyristor module testing 88−68903
Gezhouba-Shanghai HVDC transmission system, China, state-of-the-art thyristor convertors 88−68902
glass fibre reinforced plastic components for generators, switchgear and converters 85−49042
Grenoble tramway electronic equipment, power converters, cooled choppers, microprocessor control 88−69864
grid- and convertor-fed synchronous motors compared 87−42885
GTO AC-DC converter with input displacement factor and output voltage control 88−30892
GTO and optically fired thyristors appl. *(Italian)* 87−67246
GTO appls. in resonant power supplies and power convertors, cct. anal. using PSPICE package 88−43325
GTO as a fast thyristor 88−69559
GTO based DC machine drive, control using multiple microprocessor system 88−49199
GTO convertor, PWM current output type, theoretical anal. 88−69486
GTO convertor, reactive power compensated, input and output characts. *(Japanese)* 86−39932
GTO convertor, sinusoidal PWM AC currents 87−64709
GTO convertors using resonant snubbers 88−30886
GTO MOS cascode as high-perform. static switch 88−64042
GTO PWM power convertors, resonant snubber cct. study 88−69543
GTO simultaneous gating dual converter-fed DC motor drive without circulating currents 88−75740
GTO three-phase converter, PWM-controlled, characts. 86−61649

HF series resonant converter using COMFET, induction heating appls. 88−31212
HF switched mode converter saturable reactor output regulator, parallel control circuit 86−66146
HF switched mode PWM power convertors for supply appls., state-of-the-art review 88−69593
HF switching convertors using power FET modules 87−51340
HF switching DC-DC convertor employing ferrite substrate 86−33499
HF switching regulator controlled by mag. amplifier *(Japanese)* 87−58210
hidden-link convertor drive, operating mode at low and high speed starting 85−9999
hidden-link thyristor convertor drive performance under microprocessor control 86−6720
high current switching regulators *(Italian)* 87−73278
high efficiency, 12-kW switched mode power supply operating on the 440-V mains 85−33661
high power four-quadrant drives with supply-controlled converters, appls. *(German)* 85−32729
high power variable speed drive, comprised of high freq. AC link power convertor with induction motors 85−39236
high rupturing capacity fuse for converter simulation, math. model 88−69576
high speed current mean value control by full bridge thyristor converters 87−52362
high voltage power Darlington transistors for induction heating applications 88−76050
high-density resonant power supply using high-voltage IC 87−78810
high-freq. DC-to-DC convertors using mag. amplifiers 88−56453
high-frequency, low volume, point-of-load power supply for distributed power systems 88−24972
high-frequency high-density converters for distributed power supply systems 88−56454
high-frequency quasi-resonant converter technologies 88−56455
high-power convertor thyristor, load characts. at HF 88−55435
high-power upconvertor, diode operation calcs. 87−72246
high-speed switching of the power transistor in a DC-DC converter with current feedback and core saturation 87−52332
high-speed thyristor converter for electrophysical apparatus, with combined commutations 87−16864
high-tension voltage invertors protection using fuses 87−9658
high-voltage convertors, power transistor series connection 88−37309
higher harmonic filter for secondary power meas. convertor *(Russian)* 86−45035
Highgate HVDC project, system aspects 86−12400
homopolar alternators with static convertors, modelling 86−66051
homopolar induction-convertor for DS to AC conversion, CAD and tests *(Russian)* 86−19363
Hunting Hivolt Limited products for ion and electron beam appls. 87−15902
HV bipolar transistor PWM convertor with transformer coupled direct base drive 88−30912
HV convertors, invertors and choppers using in-series power transistors 88−75823
HV convertors feeding plasma-arc loads, control with series reactances *(Russian)* 88−30807
HV convertors with series connected thyristor switching *(Czech)* 87−9648
HV DC-DC converters for Hg ion motors of space vehicles 86−70978
HV HF class-E convertors suitable for miniaturization as fluorescent lamp ballast 85−6167
HV low-power converter, conversion frequency choice 85−33658
HV rectifier convertors, phase-shifted EMFs graphic representation 88−24044
HV square wave power convertor, switching freq. determ. 88−30924
HV thyristor valves, water cooling system 87−43249
HVDC 12 pulse convertor AC side harmonics compensation 86−61585
HVDC 12-pulse convertor, computer model for RF anal. 88−48544
HVDC 800 to 1200 kV convertor station feasibility, R & D needs 87−35614
HVDC bridge converters, modelling and digital simulation 88−30785
HVDC converter station, totally metal enclosed SF_6 gas insulated, for HVDC power transmission 85−32593
HVDC converter station AC switchyard, RF performance 87−30862
HVDC converter stations, arrester stresses and overvoltage protection coordination 86−12391
HVDC converter stations, EM effects and suppression 87−36038
HVDC converter transformers, insulation material development 86−12882
HVDC converters in power systems, state variable approach to anal. 88−10706
HVDC converting stations, system engineering 86−39934
HVDC convertor, used in two AC power systems interconnection scheme 85−32068
HVDC convertor and AC substation transformer core flux density and winding DC tests 86−39911
HVDC convertor and synchronous machine interaction resulting in harmonic distortion 88−48911
HVDC convertor disturbances, computer aided diagnosis 86−12501
HVDC convertor generated RF noise injected into DC switchyards, preventative measures 85−21718
HVDC convertor station, ground level electric field strength prediction method 88−42831
HVDC convertor station, reactive power and voltage control 87−30751
HVDC convertor station AC filter circuits for harmonic currents suppression 85−5199
HVDC convertor station design, recent developments 85−5185
HVDC convertor station for interconnection of local power utilities in Blackwater, USA 88−17078
HVDC convertor station implementation, integrated engineering appl. 88−68893
HVDC convertor station insulation coordination handbook 88−24110
HVDC convertor station interference with power-line carrier and radio systems 88−2622
HVDC convertor station post insulators, contamination meas. 88−48599
HVDC convertor station RFI model and characterisation program 87−35613
HVDC convertor station transformer insulating board 85−60328
HVDC convertor stations, insulation coordination and arrester protection application guide *(French, English)* 85−39089
HVDC convertor stations, switching surges investig. 88−68895

power convertors continued

magnetic voltage regulator using current mode control 87−73320
magnetically coupled base-drive cct. for power convertor appls. 88−75802
magnetically-coupled parametric circuit of power convertors, performance anal. *(Russian)* 85−65322
magnetomotive forces calc. in cascade convertor rotor armature *(Russian)* 87−9672
mains voltage disturbance reduction, LC resonant filters function meas., using portable ROMET-1a meter *(Czech)* 85−20637
mains voltage waveform notches caused by semiconductor converters *(Polish)* 87−22540
mains-driven thyristor convertors, forced commutation appls. *(Russian)* 86−26128
mains-synchronised voltage convertors, half-wave and full-wave *(Russian)* 88−55468
master slave principle in mains networks *(German)* 87−64132
MC 34063/μA 78S40 regulators, theory and appls. *(Spanish)* 88−75729
McMurray invertor, single-chip microcomputer-based controller with commutation failure monitoring 85−5166
medium power conversion transformer design problems 86−56823
medium-power transistor characteristics and development trends 87−11750
megahertz power converters for specific power systems 88−62446
MELDRIVE series variable-speed motor drive systems *(Japanese)* 88−43411
Mellach CHP station variable speed drive induction motors for fans *(German)* 88−23725
metal-oxide surge arresters for thyristor values of HVDC convertor station 86−39110
MF parallel convertor invertor systems for induction heating appls. 88−69934
MF static power convertor with parallel charge compensation, conventional regulating schemes *(Romanian)* 87−64681
MHD installations, semiconductor converters in power supply systems *(Russian)* 88−75950
microcomputer controlled GTO convertor for reactive power compensation 86−70984
microprocessor based controller for phase controlled rectifier connected to weak AC system 86−45581
microprocessor based protection and control systems for convertors 87−9650
microprocessor control of DC and AC drive convertors and rectifiers *(German)* 86−26330
microprocessor-based control unit for power convertors *(Croatian)* 87−72263
microprocessor-based fault diagnosis scheme for three-phase thyristor convertors 85−27504
microprocessor-based firing scheme for PWM AC-DC convertor, cct. configuration 85−27541
microsequencer control of a four quadrant synchronouschopper-converter combination 86−45564
microwave power conversion to DC power, novel device, appls. 85−16131
miniature DC-DC converter for medical implants 88−63522
miniaturised high quality power switching convertor for space appl. 87−43218
mining machine drives using unitised thyristor convertor control units. 88−43528
mining technologies using thyristor convertors for drive control 88−11547
model control PROMC, new control strategy with microcomputer for drive appls. 85−27542
model for steady-state stability anal. and controller design 87−78776
modelling and simulation using valve model and numerical integration algorithm 88−63529
modular power units, processor-controlled production line 85−60754
modulation invertors and static power frequency changers, tracking control with forecast 87−30834
monolithic resolver-to-digital converter for brushless controlled drives 88−76006
monolithic reverse conducting GTO thyristor, 2.5 kV 800 A 86−45543
monolithic SC voltage convertor, LT 1054 motor speed servo appl. 88−30818
monophase static invertor with reduced harmonic content, config. using plane multiprimary transformer *(Spanish)* 88−62450
monophase static power invertor with multiprimary transformer, config. and control *(Spanish)* 88−62449
MOS devices and appls., conf. London, England (May 1986) 86−45955
MOS power devices in motor control appls. 86−51793
MOSFET convertor-fed position servo-system with sliding mode control 85−65336
MOSFET failure during turn-off, drain-source diode forward biasing effect 87−38325
MOSFET four-quadrant rectifier in bridge connection with sinusoidal input currents 86−40908
power convertors continued
MOSFET gate drive technology for power convertor appls. 88−75807
MOSFET HV ramp flyback convertor for PWM switched mode power supply 85−11007
MOSFETs, protection and assessment 86−51792
MOSFETs and FETs in power conversion conf., Long Beach, CA, USA (Sept. 1987) 88−70017
MOSFETs in high commutation level, characterisation 88−71502
motor control convertor with fast recovery epitaxial diode FETs, half-bridge circuit 88−17544
motor drive power convertors, voltage state modelling technique 88−69745
motor drives, semiconductor convertors appl., developments 86−7199
MOTOR-CON '87 conf. Hannover, W Germany (April 1987) 88−70019
MPC 1602 8 A, 250 V smartpower control IC for on-board power conversion 88−71820
multi-input type converter for an uninterruptible DCpower supply *(Japanese)* 86−26167
multi-loop feedback for improving convertor closed loop small signal performance 88−75845
multi-motor drive with convertor-fed synchronous machines under AC excitation, stability anal. *(German)* 88−55640
multi-output power convertor designs 88−75848
multi-pole rectifier convertor ccts. using thyristors and TCA 785 IC phase control 86−34526
multi-resonant forward power convertor using zero voltage transistor switching 88−75815
multi-rotor electromechanical energy convertor, generalized model *(Russian)* 85−60278
multi-source boost converter, regulated HV DC from 70-240 V AC or 36-300 V DC inputs 85−33647
multi-winding flyback converter with EMI line filter, KREAN circuit anal. program 88−30855
multi-zonal pulse modulation of converters, charcts. *(Russian)* 86−61591
multibridge convertor, regulation boundaries for close short-circuits in AC grid *(Slovak)* 85−53758
multifunction DC-DC converter as versatile power conditioner, static and dynamic charcts. 87−30774
multifunction DC-DC converter as versatile powerconditioner 86−45552
multijunction thermal converters *(German)* 88−17736
multikilowatt resonant converter power supplies for sputtering applications etc. 85−32626
multilevel PWM convertors., optimum feedforward control criterion, general approach 85−27531
multimotor DC thyristor convertor drive, velocity control be excitation current control 88−69812
multimotor excavator drives, operating conditions of thyristor convertors *(Russian)* 87−79265
multiphase convertors, universal microprocessor controller for thyristor phase control 87−36021
multiphase series-resonant power convertors with reactive power control 88−75829
multiphase topology of series-resonant DC-DCconverter 86−34535
multiple loop regulators and current-mode programming 87−65823
multiple power transmission using power convertors, mathematical simulation study *(Russian)* 85−53762
multiple-hybrid power supply consisting of forward type converter and MOSFET voltage droppers 88−30832
multiple-output DC-DC convertors, stability anal. 88−17729
multiple-output switched mode power supplies *(Czech)* 88−70517
Multipower-BCD monolithic IC for DC/DC converter 88−69527
multiprocessor-controlled AC motor drive system with high quality input/output waveforms 88−23860
multiterminal HVDC systems, convertor equiv. cct. for fast simulation 88−68883
multiterminal HVDC-AC power system load flow problem soln. 86−39098
multizone pulse modulation, shaping of current supplied by network *(Russian)* 87−37493
National Semiconductor HS9151 microswitching offline power convertor 85−44073
NETASIM, interactive CSSL system with online graphics and front-end for power electronics *(German)* 85−32623
network converter with artificial switching, three-phase bridge circuit *(Russian)* 86−39942
network harmonic distortion due to electronic convertors, meas. 86−70736
network synthesis, canonical approach 87−388
networks incorporating synchronous machines, elect. energy quality improvement *(Russian)* 87−43670
New Zealand electricity system, harmonic legislation and convertor sizing appl. 85−65357
noise suppression of the RESYP convertor for the drive of a synchronous motor *(Czech)* 85−21706
noise suppressor with amorphous saturable reactor for HF switched-mode converters 86−66198
nondissipative LC snubbers for buck-boost convertors, optimum design 86−12924
nondissipative turn-off snubber in a forward converter:analysis, design procedure, and experimental verification 86−34536
nonlinear AC loads, reactive power compensation *(Slovenian)* 86−65631
nonlinear reactance, rel. to power conversion time depend., periodic law *(Russian)* 86−6853
nonlinear systems, elec. machines and energy converters, computer simulation *(Russian)* 88−23854
OCI '86, conf., Boston, Ma, USA (Oct 1986) 87−43798
off-line converter, 1 kW, power switches in half-bridge topology 87−44603
off-line switchers, 1 KV off-line converters offer good reverse safe areaand near FET switching speeds 86−20244
offline switched-mode rectifier, double forward converter using MOSFET switching, develop. 87−23927
oil drilling rigs, power factor correction in 3-phase rectifier systems 88−55763
oil platform DC motor drive converters, harmonics and commutation spikes 87−22830
Oltronic 2 V converter for VLSI boards *(French)* 85−60277
on-card DC/DC power convertors, design and perform. study 88−62470
one-phase dual convertor for two-quadrant power control of supercond. magnets 85−60310
open-cast mining machine drive power convertor programme *(German)* 85−60631
open-cast mining machine slewing gear drive power convertor system *(German)* 85−60632

power convertors continued
optimal control of convertors for electric vehicle DC traction drives *(Russian)* 86−13145
optimum nonlinear turn-off snubbers, design and appl. 87−37005
optimum topology convertor anal. using HP-41 calculator 86−19385
optimum trajectory control, resonant power converter 86−33493
orthogonal-core type transformer for DC-AC interconnection system 86−39890
overvoltage surge protection of remote control system power units *(Russian)* 86−32816
paper mill drive, appl. of converter motors *(Polish)* 88−55752
parallel rectifiers, current distrib., optimum positioning of points of leads *(Russian)* 88−37288
parallel resonant, half-bridge, anal. and design *(Chinese)* 87−73302
parallel resonant converter, bidirectional power flow control 88−11298
parallel resonant converter, bidirectional power flow control 86−45566
parallel resonant converter, state plane analysis 86−7972
parallel resonant convertor, frequency domain model 87−78793
parallel resonant convertor, performance characts. 88−12181
parallel resonant convertor, steady-state anal. and design 88−30804
parallel resonant power convertors, steady-state anal. using Fourier methods 88−75816
parallel resonant power convertors using bipolar transistors and MOSFETs, loss calcs. 88−75767
parallel-resonant converter, freq. domain model 88−55461
parallel-resonant convertor with LCC type commutation, design method 88−24962
parallel-wired branches selection 86−39929
parametric transformer, power conversion device demonstrating the principles of parametric excitation 85−21712
passive, microprocessor switch, and magnetic filters for power electronic drives 88−69777
PCI '87 conf. Munich, BRD (May 1987) 88−11598
peak current-controlled convertor stability, anal., computer simulation and expts. 86−67447
PECADS, integrated CAE package for design/simulation of microprocessor controlled static convertors *(Spanish)* 88−37304
PECADS simulation package for CAE of microprocessor-controlled static power convertors 88−43318
PFM, metrological characts. improvement 87−36022
phase convertors, synchronous, anal. and design using state-space approach 85−44085
phase-locked oscillator control system for static power convertors 86−12902
phase-modulated, resonant power conversion techniques for high-frequency link inverters 87−30775
photovoltaic array energy utilization factor 87−15612
photovoltaic cooling system with eutectic storage 88−17954
photovoltaic DC motor drive system with convertor and solar cell array 87−51113
photovoltaic power system and utility grid interconnection, power conditioning 85−53629
photovoltaic power system tracking DC-DC converters stability 87−9443
photovoltaic power systems, power conditioner subsystems 85−53627
photovoltaic pumping system based on induction motor driven pump, optimisation 87−42732
photovoltaic solar cell module with integrated DC conversion for battery float charging 87−9838
photovoltaic solar power system power conditioning with microprocessor control 87−30455
PKP traction substations with diode converters, smoothing system design and develop. *(Polish)* 88−30967
plasma stabilisation appls. 88−75742
plasma-arc methane cracking plant, protection of convertors from switching surges using shunt reactors *(Russian)* 88−69955
plotting the electromagnetic characteristics when transmitting power through a magnetic frequency divider *(Russian)* 85−16117
PM synchronous machine, solid rotor, static convertor-fed, global simulation method for performance evaluation 85−32470
PM synchronous machines, current and voltage convertor-fed, inductance calc. and performance evaluation 85−32471
polyphase, supply voltage perturbations, cct. reaction *(Russian)* 87−78759
polyphase convertor configurations using phase-shifting transformers *(Russian)* 88−55394
polyphase electromechanical convertors, slip mode anal. *(Russian)* 88−43282
polyphase rectifier bridge, operation and characteristic features, applications *(German)* 85−60302

regulators, current mode control 85−6162
reluctance machine supply convertors, feeding current optimal forms *(French)* 87−58051
reluctance motor, thyristor convertor-fed, variable speed drive appl., simulation method 85−32475
reluctance motor drive, variable speed switched, steady-state anal. 88−43423
remote household power supply, high efficiency invertor using power MOSFETs 85−48896
resonance convertors for commutation losses reduction, principle, topology and family configs. *(Italian)* 87−44546
resonance DC link inverter-fed AC machine control 87−78631
resonant and PWM switches, equivalent cct. models 87−65784
resonant converter topologies for high-voltage DC appls. 88−63499
resonant converter topology 87−72304
resonant converters, switch concept, structures and performances 87−72305
resonant converters with multiple outputs, cross-regulation charact. 88−70523
resonant convertor, low capacitance power MOSFET operation 87−67301
resonant convertor analysis using state-plane techniques 88−55502
resonant convertor switches, structure and performance 88−75830
resonant convertors, FM controller IC, LD405 88−30817
resonant convertors, zero-current switching, appl. of IGT/COMFET devices 87−65845
resonant convertors for power transfer control *(French)* 87−9644
resonant convertors using bipolar transistors and MOSFETs *(Italian)* 88−31987
resonant DC link convertor concept 87−43240
resonant DC-DC converter using parastic impedances of high-voltage transformer 88−75839
resonant DC-DC convertor, circuit leakage inductance effect 88−55450
resonant DC/DC convertors, zero-voltage switching and zero-current switching design 87−73325
resonant DC/DC power convertors, zero-voltage switching, energy conversion boundary calc. 87−73326
resonant flyback switched-mode DC-DC converters using static induction power devices 88−69554
resonant mode amplifier, using DC-DC convertor in push-pull configuration 86−20325
resonant power converter switching mode power supplies, anal. 86−7992
resonant power converter transformer with spiral winding and flat core 87−30732
resonant PWM DC-DC power converters, constant freq. digital control, zero-voltage switching 88−55513
resonant switches, switching convertors performance improvement 85−61112
resonant transistor DC-DC convertor with capacitive output filter 86−26137
resonant type constant current converter withsaturable core 85−61111
resonant zero-voltage-switching DC/DC power convertor, state-plane analysis 87−73324
reverse conducting thyristors for high-power,medium-frequency converters 86−39916
reversible electric drive from DC machine operated through current-parameter rectifier convertor 87−72474
RF power conversion techniques 86−40895
RFX fusion expt., Italy, power supply protection against plasma disruption and fault conditions 87−22607
RFX power supply, protection and switching system 87−72276
Rifa distributed power supply using DC/DC convertors 87−44537
ringing choke convertor, anal. *(Japanese)* 86−67032
ringing choke convertor with MOSFET, config. and performance study 87−52372
RLC circuits with rectifiers, Lagrange energy function gradient determ. *(Russian)* 87−9670
RMS-to-DC convertor, 25 MHz, thermal design 87−16879
road vehicle high-power module for DC drive convertor 88−37664
robot and machine-tool multicoordinate electric drives with microprocessor control of transistor converters 87−78983
rolling mill electric drive motors using thyristor converters, commissioning results *(Russian)* 88−49311
rolling mill thyristor-controlled drives, asymmetric auto-oscillations suppression *(Russian)* 85−49219
ROM based equidistant digital pulse firing scheme forthree-phase thyristor converters 86−61606
rotating power convertors for German Federal railway power supply system *(German)* 85−10171
sampled data modeling for power electronic circuits 86−52662
satellite power supplies, DC/DC invertors for AC power distribution 86−12116
Scherbius cascade system power factor improvement by forced commutation convertor 86−70909
Schottky diode, barrier height and impurity conc. optimisation for max. rectifying efficiency 85−61892
Schottky-diode optimization for a low-voltage power converter *(Japanese)* 85−40684
Scott convertor, 400 Hz, 2.5 kVA, interface suppression *(French)* 86−13985
SCR, for high-speed axial air-gap reluctance machines, expt. study 86−39752
SCR bridge rectifier fed, effects of voltage disturbances in distribution network 85−27711
SCRs, GTOs and power transistors increase load capacity for power conversion 85−44068
second-order PWM converters, stabilisation coeff. calc. *(Russian)* 88−30806

power convertors continued
secondary power supply, half-wave voltage converter based design 87−59147
self commutated power converter for stabilizing torsional interactions 87−78769
self-commutated convertors using GTO thyristors, driving and protection 88−43276
self-commutated convertors with unidirectional current flow for SMES, circular PQ diagram approach 87−9637
self-commutated electronic power convertors, ANSI/IEEE standard 88−5785
self-commutated reactive power converter with inductive store, static compensator config. *(German)* 88−30778
self-contained electric power systems with semiconductor converters, energy indices anal. *(Russian)* 87−77946
self-controlled synchronous motors, commutation effects on machine perform. 88−48926
self-oscillating convertor, forward type with bidirectional mode, config. and operation *(French)* 87−44532
self-oscillating flyback convertor, power loss reduction and design *(Japanese)* 85−61099
self-oscillating Royer invertor, overcoming major disadvantages 85−65352
self-oscillating thyristor circuit for power conversion 88−11280
self-regulated, high efficiency, class E power invertor/convertors without feedback control 87−4798
semiconductor, capacitor storage systems appl., power losses and effectiveness determ. *(Czech)* 88−37627
semiconductor appls. in power convertors based on chopper circuits *(French)* 88−55471
semiconductor classification and fundamental props. *(Czech)* 86−45505
semiconductor components appl. *(Czech)* 85−65326
semiconductor converter based power sources for industrial electrical process installations 86−45856
semiconductor converters optimum design, reduction of models in computer design optimisation *(Russian)* 87−22536
semiconductor convertor based multiply-coupled power supplies, anal. *(Russian)* 85−65325
semiconductor convertor circuits for metal treatment appls., electromagnetic processes anal. *(Russian)* 88−18240
semiconductor convertors, generated interference voltages character, propagation and limiting measures *(Czech)* 85−41639
semiconductor device general purpose models for CAD of power convertors *(Russian)* 87−74232
semiconductor power and freq. converters with GTO thyristors for DC motor control 87−58181
semiconductor power components, Czechoslovak (CKD, Prague) production plan, 1985 to 1990 *(Czech)* 87−31692
semiconductor power converters with harmonic reduction elimination *(Korean)* 87−64703
semiconductor power convertor circuits, simulator for development and design *(Japanese)* 85−28335
semiconductor power convertors, voltage to earth phenomena *(Czech)* 86−33479
semiconductor power switch design for power convertor appls. 88−69585
semiconductor voltage converters, toroidal transformers calc. using BASIC program *(Russian)* 87−58207
sensitivity fns. of state variables for location of high-power conc. interf. 87−30831
separately excited DC motor, 3-phase semi-convertor fed, electronic speed-regulator system 86−70927
separately-excited DC motor control by thyristor converter, closed-form soln. 87−43077
sequential commutation device with regenerativestored-energy takeoff 87−9657
sequentially timed current-switch phase-modulatorcontroller with DC output 86−34516
series reactances, EMC of high power HV plasma arc load *(Russian)* 87−58196
series resonant converter, optimal trajectory control implementation 87−78786
series resonant convertor, anal. and design by state-plane diagram 87−31697
series resonant convertor, anal. using normalised switching freq. 86−7996
series resonant convertor, control methods 85−32616
series resonant convertor, duty cycle controlled, steady state anal. 87−78794
series resonant convertor, integral cycle mode control 88−24999
series resonant convertor, output characts. anal. 86−67034
series resonant convertor, parasitic loss effects on performance 86−45579
series resonant convertor, PWM or current controlled for low switching loss, anal. 87−78792
series resonant convertor, PWM or current controlled for low switching loss 88−30802
series resonant convertor, small signal AC equivalent circuit modelling 87−73323
series resonant convertor, steady-state analysis 86−20270
series resonant convertor, steady-state and small-signal anal., graphical approach 87−43246
series resonant convertor, steady-state/transient characts. anal. using state-plane techniques and piecewise-linear analysis 85−32615
series resonant convertor design for minimum component stress 87−4785
series resonant convertor with capacitor voltage clamping diodes, steady-state anal. *(Japanese)* 88−18923
series resonant convertors, novel operation and control modes 85−44071
series resonant convertors, operating freq. range reduction 87−36958
series resonant convertors, resonant circuit design 87−72292
series resonant convertors for reactive power compensation 88−30799
series resonant convertors with phase shift control, computerised perform simulation 88−55504
series resonant DC-DC converter, closed-loop digital control 87−78796
series resonant DC-DC convertor with paralleled power modules, phase staggering control 87−78797
series resonant DC-DC convertors, multiphase topology 86−66154
series resonant power converter using flyback control 86−7983
series resonant power convertor, cycle mode control 88−75766
series resonant power convertors, SIT based for ultrasonic transducer appls. 88−75784
series resonant power supply converters as pre-conditioner converter, mains/line pollution problems solution 87−51369
series resonant switching convertors, hybridised control and protection 86−39950

power convertors continued
series-resonant convertor design with normalised state-plane diagram 86−52647
series-resonant convertor with parallel resonant circuit, rectifier design 88−24989
series-resonant DC to 3-phase convertor with low harmonic distortion 85−44070
series-resonant DC-DC converter with paralleled power modules 88−55458
series-resonant DC-DC convertor for current-mode control 87−44582
series-resonant energy conversion with multi-segment current waveforms for bipolar energy flow 88−75769
series-resonant invertor for induction heating 88−37758
series-resonant power converter, pulse integral central system, design and stability 85−5167
series-resonant power converter, static and small signal anal. 88−24022
series-resonant power convertor, optimal input current waveforms, control strategy 88−55443
series-resonant power convertors for fn. generator operation 88−69539
servo drive improvement, power convertors and control theory *(Korean)* 88−49048
shaft hoisting machinery drives with thyristor convertors 87−51517
short-circuit losses in convertor-transformer system *(Russian)* 86−66140
shunt VAr compensator, thyristor controlled, with dual-convertor scheme 88−30901
Si9100 smart power IC for 0.2 to 2.5 W DC/DC convertors 87−78777
SIMOVERT P transistor PWM converters for standard induction motors 85−16128
single class, power coefficient calc. method using Laplace conversion *(Russian)* 88−24062
single ended boost regulators topology 87−51371
single event upset sensitivity study of power convertors with MOSFETs in space environment 88−24969
single phase rectifier 28 V/25 A with internal operatingfrequency 25 kHz *(Slovenian)* 86−13974
single to three phase quasiconverter, theoretical anal. 88−49066
single to three phase static converter using solid state switches 88−30889
single to three-phase quasiconverter, characts. meas. 88−49067
single-chip power rectifier/control circuits combination devices, struct. and features *(Italian)* 85−17134
single-cycle voltage converter, design 88−11285
single-ended DC-DC convertor, undesirable setting of mag. amplifier *(Japanese)* 88−18928
single-phase capacitor-run induction motor behaviour with GTO convertor 87−22395
single-phase HF link voltage conversion to 3-phase LF voltage 87−51379
single-phase switch model rectifier , high power density, structure 86−46570
single-phase thyristor controlled ccts., additional active power losses determ. by sine signal of equiv. power method *(Polish)* 87−43181
single-phase transformer-switch alternating voltage convertor, power characts. 86−51741
single-phase voltage rectification using power convertor with 3-core transformer *(Russian)* 88−49044
single-quadrant hybrid pulse convertor, thyristor-power transistor combination *(Slovak)* 86−61592
sinusoidal convertor, class D, constructed with FETs 88−70549
sinusoidal input current convertors for energy storage, speed control 88−75847
sinusoidal mains current blocking convertor structures *(German)* 85−53766
sinusoidal PWM three-phase converter-fed DCV motor drive 86−33745
six-phase squirrel cage motor AC-DC and AC-AC power conversion modes 87−22380
six-pulse bridge converter with input filter, simulation 86−12930
six-pulse bridge convertor, external commutation on DC side, operation and control characts. *(German)* 87−22511
SKODA elec. locomotives, develop. trends and present day types 87−72515
SKODA electric locomotives with asynchronous traction motors 87−72519
small-signal behavior of ideal DC-to-DC switching convertors 87−65855
small-signal modeling of pulse-width modulated switched-mode power converters 88−56452
SMARTPOWER integrated circuits for switchmode power supplies 87−51367
SMES power conditioning circuits, parallel convertors with microcomputer controlled current balance 86−45729
SMPS, inductive crosstalk minimisation 88−75793
snubber energy recovery circuit in power electronic appls. with high switching freqs. 88−30800
software-controlled PLL for power converter controller, low freq. 88−55447
solar cell, interface cct. with commercial AC bus 88−24959
solar cell, interface cct. with commercial AC bus *(Japanese)* 87−23925
solar photovoltaic/electrolyser with active power conditioning for solar hydrogen production 85−65440
solar power maximum power point trackers, general model 86−33703
solar pump system with asynchronous motor and microcomputer control 88−17454
solid state AC motor drives develop., converter technology, control 88−55650
solid state AC motor drives with BJT transistor convertors 88−18105
solid state auxiliary supplies for traction applications, rotating machines or static convertors 87−16131
solid state power electronics, innovation and future trends *(Japanese)* 86−52675
solid-state, induction heating appl., state-of-the-art review 87−43659
solid-state high frequency power switching electronics *(Japanese)* 86−51773
solid-state power convertors, direct soln. 85−21734
solid-state power convertors with source and load filters, direct soln. technique 85−11003
solid-state power devices and ccts. for HF elec. process heating appls., review 86−67019
sources and supplies, conf., London, UK (April 1987) 88−55826
spacecraft AC power system for auxiliary equipment 85−10021
spacecraft power converter devices with nonlinear elements, simulation 88−54720
spacecraft power system computer control, autonomous power management 85−48416
spacecraft power systems using power convertor hybrid module 85−48421
spacecraft switched mode power supplies, magnetic proportional drive circuits for bipolar transistors 86−7988
SPICE2 high-frequency transformer model for DC-DC converters 88−69575

power convertors continued
SPICE computer program models 88−23801
SPICE model of the thyristor for use in static power converter studies 88−24069
squirrel cage motor, converter thyristor control system, freq. and phase control 87−58073
squirrel-cage motor frequency changer with DC intermediate circuit and forced quenching *(German)* 86−19369
stability anal., computer-aided, steady-state solution 87−36040
stable power supply system for computer-aided equipment 87−30794
stand-alone DC/AC convertor, feedback scheme 86−722
standby power supply for telecom. equipment, reduction of harmonic content in thyristor convertors 87−30840
state plane anal. of resonant power converter 86−33492

switching convertor regulation by primary circuit inductor voltage 85−558
switching convertors, high-power type, low-cost standardised current-central modulator design 85−44873
switching convertors, use of power semicond. devices, charact. and developments 87−67182
switching convertors employing current injected control, optimal design strategy 85−39104
switching DC to DC convertors, duty-ratio programmed mode, unified topological modelling 88−5767
switching DC-DC converters, modelling, unified topological approach 86−12932
switching DC-DC convertors, computer-aided modelling and anal. *(Spanish)* 86−13986
switching DC-DC convertors, regulator power stage design *(Spanish)* 86−46551
switching DC-DC convertors for photovoltaic applics. 86−33526
switching DC-DC regulators, modelling, anal., and design *(Spanish)* 86−26152
switching DC-DC regulators, modelling, anal. and design *(Spanish)* 86−52670
switching flyback type DC-DC converter for subscriber equipment total-isolation systems 88−30831
switching forward DC-to-DC convertor, surge and noise generation, anal. 87−52333
switching mode power convertor, LT 1070 monolithic chip set with overvoltage prevention *(German)* 86−52648
switching mode power convertor with phase locked oscillator as ultrasonic atomizer transducer driver 86−7989
switching network losses *(German)* 87−16856
switching power convertor topologies, duality relationships investig. *(Chinese)* 88−24049
switching power convertors, circuit-oriented discrete-time modelling and simulation 87−72272
switching power convertors, freq.-domain cct. anal. 88−75762
switching power convertors, multiple air-gaps mag. cct. design 86−63928
switching power convertors, output voltage ripple investig. for feedback loop design 88−30925
switching power convertors, sliding-mode nonlinear control 87−58213
switching power FET structure in hybrid technology: a new approach to performant spaceborne converters 85−6974
switching power FET structure in hybrid technology and spaceborne convertor appls. 86−7980
switching power supplies, high performance 70I series 85−28378
switching power supply, active power factor correction, simplified control algorithm 86−34532
switching power supply in telecommunications 87−30797
switching power supply selection 87−51339
switching power supply using HF magnetic amplifier with amorphous saturable core 87−44570
switching power supply with switching convertors, elec. and magnetic circuit interactions 87−44568
switching regulator, push-pull converter controlled by HF mag. amplifier 87−513
switching regulator controller design using PIM control and feedforward compensation *(Korean)* 88−11308
switching regulators *(Italian)* 86−33504
switching regulators, self oscillating, nonlinear compensation study 86−7987
switching regulators and convertors, output ripple voltage reduction 85−33664
switching-regulator DC-DC power converter with wideband feedback control, subharmonics and chaos, anal. 88−70507
switchmode converter-type rectifier as telecoms. battery charger 87−30805
switchmode power convertors using Schottky diodes 88−70545
switchmode power supplies and power converters, appls. of power ICs conf., Munich, Germany (June 1986) 87−43781
switchmode power supplies with HF convertors 88−17747
symistor DC electric drives, design principles and problems 86−45732
symmetric current-programmed DC/DC convertors, aux. ramps for saturation prevention 85−578
synchronous chopper for improved performance convertors 85−5189
synchronous chopper-convertor combinations, harmonic reduction 85−32618
synchronous chopper-convertor combinations, reduction of harmonics 85−44084
synchronous converter for alternating motors control *(Spanish)* 87−9669
synchronous drives performance improvement, digital approach 88−11428
synchronous generator system, convertor fed, for medium and large power plants 86−66055
synchronous machine, multi-purpose model for autonomous electrical systems processes investigation *(Russian)* 88−75594
synchronous machine drives, starting 85−53872
synchronous machine with convertor load, harmonic anal. 86−39719
synchronous machines, 6-step convertor fed, design study 86−56729
synchronous machines, 6-step convertor fed, expt. study 86−56730
synchronous machines, converter fed, rotor winding design for increased perform. 88−17573
synchronous machines, harmonic modelling 88−37191
synchronous motor drives, microprocessor control of power convertors 85−32599
synchronous motors, static power convertors and control *(Swedish)* 85−65227
synchronous motors with thyristor controlled speed, operation and comparison *(Polish)* 85−16025
synchronous-motor drive systems, large capacity *(Japanese)* 88−62666
system protection in microseconds by PYROBREAKER devices 85−38579
telecommunication equipment, power supply system, design 85−30594
telecommunication power supply considerations 87−30802
power convertors continued
telecommunications appls. conf., Stockholm, Sweden (June 1987) 88−24342
telecommunications power supply technology, conf., Toronto, Ont., Canada, (Oct. 1986) 87−22984
telephone office power supplies, boost convertors for cost reduction, BASIC listing 86−61633
telephone subscribers, power feed techniques 85−57834
three phase 6 or 12 pulse thyristor bridge converters, current and voltage calc. 87−58198
three phase converters under unbalanced supply conditions, anal. 86−45573
three phase convertors, mathematical model *(Russian)* 87−9664
three phase GTO converter with PWM, asymmetrical pulse pattern 88−69578
three phase inductor fed switch mode rectifier convertor 87−64692
three phase offline switching power supply, unity power factor, low telephone influence factor 87−30810
three phase power invertor ccts. and appls. *(French)* 86−33507
three to single phase converter, structure and control drive 88−69785
three-electrode convertor, output capacitance calc. *(Russian)* 85−65318
three-phase AC-to-DC power transistor converter-controlled DC motor drive 88−11416
three-phase AC/AC converter transformer-resistors, anal. 88−62433
three-phase bridge connected power convertors, commutation angle during two-phase short circuit *(Slovak)* 86−33486
three-phase bridge convertor operation in AC network, short-circuit current response *(Slovak)* 86−45504
three-phase bridge convertor supplying active load, steady-state analysis 88−55473
three-phase bridge-controlled convertors operated on weak nets, mathematical model *(German)* 85−60321
three-phase controlled current PWM converter with leading power factor 87−43201
three-phase controlled-current PWM convertor with leading power factor 86−45553
three-phase converter, single chip microcomputer based adaptive current controller 88−69612
three-phase convertor, digital control voltage and current *(Slovenian)* 86−19370
three-phase convertor, symmetrically controlled, operation during two phase mains short-circuit *(Slovak)* 86−70972
three-phase full-wave thyristor convertor, microcomputer triggering unit *(Slovenian)* 86−19371
three-phase induction motor servo and spindle drives for machine tools *(German)* 86−19266
three-phase inverter, functioning 88−69793
three-phase machines, static convertor-fed, math. model for computer simulation 85−32468
three-phase output convertor, design for variable speed operation of AC motor *(French)* 87−30792
three-phase power frequency conversion with high efficiency and high spectral purity 85−10965
three-phase PWM inverter/rectifier/converters, functional anal. method 87−51346
three-phase rectifier-invertor frequency changer, optimum design 86−12896
three-phase regenerative converter with controlledflywheeling for DC drive low-speed performance 86−33490
three-phase thyristor bridges, configs. for current conversion appls. *(Italian)* 87−36971
three-phase traction, power convertor system *(German)* 85−49004
three-stage electromechanical converter with two-pole magnetised rotor *(Russian)* 88−75735
Thyresch current convertors, DT series, operational experience *(German)* 85−5181
thyristor, shipborne electric power system, anal., co-operation of induction motor and synchronous generator, anal. *(Polish)* 88−37659
thyristor, switching capacitor active power calc., nonsinusoidal voltages of complex shape *(Russian)* 85−32583
thyristor, three-phase supply network voltages, nonsinusoidality factor determ. *(Russian)* 85−32582
thyristor based converters for electrothermy 86−45519
thyristor based power convertors, production by AEG *(German)* 86−40537
thyristor bridge configs. for interfacing high power photovoltaic arrays to elec. utilities 87−30456
thyristor bridge convertor, three phase six pulse, novel simulation program 86−6913
thyristor bridge convertors, digital control systems, disturbance response techniques 85−65337
thyristor bridge convertors, high power, overcurrent protection *(Polish)* 87−4812
thyristor bridge convertors, influence of firing angle on system stability area 86−6915
thyristor compensators, wideband filter compensator utilisation *(Russian)* 85−65319
thyristor components for induction furnaces *(Czech)* 87−36249
thyristor controlled current convertor drives for sugar centrifuges *(German)* 85−5602
thyristor converter DC drives, power factor and harmonic content consideration, appl. in railway traction 88−5975
thyristor converter fed low inertia DC motor drives, braking optimisation *(Russian)* 88−18116
thyristor converter valve, design, installation, operating experience on Pacific DC intertie 88−24042
thyristor converter-modulated impedance under unbalanced system conditions, digital simulation 87−30757
thyristor converters with cable-type saturable reactor, operating conditions improvement 87−36018
thyristor convertor, 3-phase fed, powers and power factor *(Polish)* 85−53745
thyristor convertor, three phase, with two-section compensating device 86−51760
thyristor convertor and supply network matching, control and harmonics anal. *(Russian)* 86−19364
thyristor convertor circuits, transient and steady-state anal. *(Russian)* 86−52666
thyristor convertor devices, computer aided thermal calcs. 86−45510
thyristor convertor forced-commutation units, appl. of charge storage diodes 87−72243
thyristor convertor optimal digital control, engineering algorithm 86−66178

power convertors continued
thyristor convertor output voltage spectral density allowing for finite switching time *(Russian)* 86−56835
thyristor convertor parasitic sensitivity and failure probability evaluation 86−66174
thyristor convertor power networks, transients anal. using Laplace transforms *(Russian)* 85−32598
thyristor convertor power supply equipment *(Russian)* 85−44090
thyristor convertor reactive power minimisation using interphase reactors 88−75758
thyristor convertor substation for DC power generation *(Russian)* 85−44091
thyristor convertor-fed DC motor control and protection 87−9577
thyristor convertors, EMC, freq. characts. *(Russian)* 88−17711
thyristor convertors, energy characts. optimisation *(Russian)* 88−30808
thyristor convertors, harmonics elimination *(Slovenian)* 86−19372
thyristor convertors, having AC source inductance, new method of forced commutation 85−27488
thyristor convertors, HV, firing control using lightguides *(French)* 86−66156
thyristor convertors, microprocessor-based with second order loads, self-adaptive control 86−51787
thyristor convertors, operational features, in self-contained power plants for industrial networks *(Russian)* 85−21729
thyristor convertors, phase control systems, majority redundancy *(Russian)* 85−10006
thyristor convertors, phase controlled, 3-phase, 6-pulse, regenerative control range extension 87−15919
thyristor convertors, power engineering appls. *(Russian)* 86−61589
thyristor convertors, up to 100 kW capacity, for electric drives 85−44103
thyristor convertors for reactive power and waveform distortion compensation, computer investigation *(Russian)* 85−60314
thyristor convertors protection, overvoltage protection by varistors after disconnection by explosion fuse *(Russian)* 87−22527
thyristor convertors under digital control, system analysis 87−16876
thyristor convertors using Siemens TCA 785 phase-shift wave-chopping controller chip *(German)* 86−67010
thyristor convertors using split-phase thyristor control IC TCA 785 *(Italian)* 87−10657
thyristor convertors with DC circuit, operation and principles *(German)* 86−12888
thyristor development for HVDC transmission system appls. *(Chinese)* 87−4773
thyristor drives, power system requirements 86−6873
thyristor invertor bridge cct. design for high-power appls. *(Spanish)* 87−52353
thyristor power convertor control and monitoring by dedicated microprocessors 86−66183
thyristor power convertors, power parameter measurements *(Czech)* 86−6869
thyristor power convertors for variable speed squirrel cage motor drives *(German)* 85−5182
thyristor pulse convertor-motor system numerical technique for variable structure model construction 85−44093
thyristor pulse-width convertors, anal. and design of switches with instantaneous commutation of current *(Russian)* 86−6881
thyristor rectifiers supplying industrial plant, short-circuit currents high speed extinction *(German)* 85−39087
thyristor three-phase convertors under unbalanced supply conditions, operation and control 87−43253
thyristor three-phase forced commutated AC/DC convertors, PWM patterns 87−15865
thyristor trigger circuits, long pulses former with an optimal form for power thyristor control *(Bulgarian)* 85−6238
thyristor valves for HVDC power transmission, cost savings and availability *(German)* 85−15568
thyristor-controlled, under unbalanced conditions, digital simulation 85−27517
thyristor-convertor-fed DC drive, digital current controller 88−31088
thyristorised DC convertors with parallel commutation switching, cut-off monitoring *(Russian)* 86−26149
thyristors and diodes appls., ccts., and protection *(German)* 85−39092
thyristors with damping capacitors for power convertor circuits supplying electrotechnical plants *(Russian)* 85−44110
time division active power converter with natural sampling PWM, errors 88−24041
time domain digital simulation, appl. to buck convertor with feedforward compensation 86−51757
time-dependent M-phase convertors with arbitrary control law, power indices anal. 85−60298
time-division power convertor for active power meas., computer aided error anal. 86−65790
Tokamak fusion reactor coil power supply with power convertors 87−51334
tokamak JT-60 magnet power supply control and protection, overview *(Japanese)* 88−43326
topology, power electronic convertor ccts. 88−56456
track-bound local transport, commutator-free asynchronous motor drive systems *(German)* 88−5935
tracked transport systems, magnetically levitated, power supply systems anal. *(Russian)* 85−39269
tracked transport vehicles, with electrodynamic suspension, frequency starting *(Russian)* 85−39259
traction, synchronous and asynchronous traction motors comparison *(Czech)* 86−33775
traction current supply, overview of current and future situations *(German)* 85−39246
traction power convertor evaporative cooling using R113 refrigerant *(German)* 85−60494
traction unit power electronics equipment Italian State Railways *(Italian)* 87−31049
traction vehicle electronic drive systems, influence of GTO thyristors 85−39248
traction vehicle power transmission system with transformer reduced or eliminated 87−43599
transformer equipment for converter units, oil filled and dry, development prospects 86−33454
transformer winding losses, harmonic comp. depend., anal. *(Russian)* 86−51696
transformer-induced low-frequency oscillations in the series-resonant converter 87−22569
power convertors continued
transformer-type parametric convertor spectral analysis by successive approximations *(Russian)* 86−56833
transformerless DC-to-DC converters with largeconversion ratios 85−65365
transformerless line-synchronized rectifying voltage converters , comparative anal. 88−75728
transformerless voltage converter, induced interference anal. 88−69508
transformerless voltage convertors, operation modelling *(Russian)* 88−49046
transient response eval. from frequency characts. 86−45512
transient response in a converter controlled by a magnetic amplifier 88−12203
transient response of a converter having a magnetic amplifier *(Japanese)* 87−30799
transient simulation algorithm for power electronics systems 87−73279
transistor HF switching on 380/440 V industrial networks *(French)* 87−58184
transistor PWM converters with high output frequency and communications capability 88−69492
transistorised additional converters for telecommunications power supply *(Polish)* 88−69509
transistorised bridge ccts., advances *(German)* 85−32589
transistorised HV convertors, switching freq. improvement design considerations 87−15908
transistorised pulse-width convertor HF noise generation forecasting and reduction *(Russian)* 86−6862
transistorized bridge convertors, improved efficiency, reliability and dynamic performance 85−33662
transmission network voltage breakdown due to three-phase bridge thyristor convertors *(Polish)* 86−56399
transmission networks, distortion current compensation by power electronic convertors 87−15236
transmission networks, multi-bridge convertor control at single phase short circuits *(Slovak)* 85−32117
transportation vehicles with magnetic suspension and linear traction motor, prospective drive 88−31121
TRANSRESCH-N−an information system for measurement and control of continuous current convertor devices and drives *(German)* 85−5409
travelling-wave microwave to DC convertor using distributed DC retardation 85−23351
trigger circuit for closed loop control of thyristor convertors 86−46638
triple frequency changer, power factor correction by forced reactive power circulation *(Japanese)* 86−51766
trolley networks, unified thyristor convertor stations *(Czech)* 86−40238
turbogenerator rotor balancing and overspeed test equipment drive 88−17563
twelve pulse convertors, steady-state anal. 87−30849
twelve-phase cascade-bridge transformer (convertor) with compensating devices 86−39928
twelve-pulse converter systems, fault operation investigation 88−69552
twelve-pulse convertor, input line current harmonic evaluation *(Russian)* 85−5183
twelve-pulse hybrid power convertor 86−61647
two-bridge convertor, minimising the noncanonical harmonics of input current and output voltage *(Russian)* 87−51349
two-chips power supply control IC isolation specifications 87−72301
two-phase reluctance motor with simplified power convertor 88−17565
two-phase thermosiphon cooling of large-diameter power conversion thyristors 86−67856
two-pulse thyristor bridge convertor with external commutation control *(German)* 85−27487
two-switched-network converter system, small-signal freq. response 87−22566
TWT power supplies *(Japanese)* 87−28489
TWT power supply for multibeam communications satellite, HV DC-DC convertor design 88−39007
TYRECT C-RK thyristor convertors, DC motor supply appl. *(Croatian)* 88−30736
UHV converter transformer and smoothing reactors, insulation dimensions development 86−39889
ULN-8163A/R monolithic IC for power supply control 87−73289
unbalance control, of utility 3-phase power transmission system, caused by single-phase electric traction 85−27027
uninterruptible power supplies *(French)* 88−17731
Uninterruptible Power Supply, digital simulation using EMTP gen. purpose program 87−44590
unity power factor single phase power conditioning 87−78791
UPS for computers, low impedance, with static and rotary power convertors, reliability 87−43255
UPS systems, GTO thyristor appl. to convertors, protection system, snubber circuit 88−30865
UPS with secondary cell and invertor with wide DC input window 87−30833
urban railway vehicle self-commutated convertors with evaporative cooling 86−71112
Uruguaiana frequency converter stationinterconnecting Brazilian and Argentine AC systems, control 86−26165
USSR-Finland HVDC back to back link, power convertor equipment 86−51779
utility-interactive DC-AC power conditioning system 86−45590
utility/DC power conditioning interface power circuit giving harmonic-free AC current waveform 87−30785
V^+ to −5 V convertor, cct. 87−10647
valve converters, lead control *(Russian)* 88−55429
valve motor, pulse convertor fed, math. model design principles *(Russian)* 88−23991
VAr compensation and harmonic-free power conversion systems, modeling and synthesis 87−52351
VAr compensator control strategies *(German)* 88−30243
variable freq. drives, requirements for cycloconverter, voltage and current-fed convertors 88−31067
variable freq. transistor invertors for starting high-power induction motors *(French)* 86−12901
variable reluctance machine-thyristor convertor modelling *(French)* 86−6710
variable speed AC drive with motor and freq. convertor 88−49204
variable speed DC drive system fed by dual convertor, speed and current control 87−43493
variable speed drives, power semiconductor appls. conf., London, UK (July 1988) 88−64583

power convertors continued
variable speed drives, use with mechanical systems, problems, solutions 88−69765
variable speed electric drives in industrial mechanical engineering for power 1 W to 10 MW using electron convertors *(German)* 85−39242
variable speed wind turbines, dynamic modelling and analysis 86−33229
variable-frequency convertor fed synchronous motor design 88−17566
variable-speed AC drives, high power, thyristor converter-fed synchronous machines 86−19536
variable-speed constant-frequency aircraft generating system, math. modelling 87−35470
variable-speed convertor-fed AC-drives, high-speed controller with simple program language 85−10155
variable-voltage convertor for four-wire circuits *(Russian)* 87−9673
variable-voltage variable-frequency elevators, recent trends *(Japanese)* 88−43455
VAZP battery charger converter, circuit breaker closing, rectifier tripping prevention *(Russian)* 88−37285

asynchronised synchronous motor in two machine system *(Russian)* 86−39729
asynchronous generator principles and applications in hydropower generation *(German)* 86−45402
asynchronous linear motors for high speed trains, tests and calc. *(German)* 85−5125
cageless reluctance motor design and load-angle feedback control strategy 86−45385
capacitor-input rectifier filter, input characts. 87−4800
cement plant conditions and motor selection criteria 87−65010
centrifugal pumps/fans variable frequency drives and power factor 85−53880
chemical plant AC system connection to HF distrib. lines, cycloconverter link characts. 88−11297
closed-loop adaptive power factor controller, field testing 88−68786
commutatorless motor drives, microprocessor controlled speed regulator 85−39234
compensation devices for cooperation with high power appliances 85−5344
computer sensitivity to waveform distortion, power factor and line distortion correction 87−64726
conducted interference voltage of AC-DC converters calc. 87−22567
controlled induction motor-thyristor cascade performance 87−43027
controlled rectifiers, three phase, source voltage fluctuation effects on power factor 86−51750
controller markets and performance 85−65408
controller with digital feedback 85−48529
controllers market and laboratory tests 85−65410
current source inverter fed induction motor drive, microcomputer power factor angle control 88−11420
current-comparator-based wattmeter for high voltage power measurements at very low power factors 88−22682
cycloconverter for linking commercial and HF distribution lines 86−45549
cycloconvertor, HF AC-to-AC, with back-to-back thyristors, derivation of equiv. circuits 87−30783
cycloconvertors, multiparallel asymmetrical type with improved power factor and waveforms 86−45585
DC motor drive system, 3-phase AC to DC convertor-fed, sinusoidal pulse width modulated, external performances 85−27712
DC-AC interconnection converter using orthogonal core *(Japanese)* 88−6663
distribution network loss minimisation by synchronous motor overexcitation and power factor *(Russian)* 86−44960
distribution network planning and operation, loads voltage and frequency dependence importance *(German)* 85−32073
doubly-fed induction motor operation at constant power 87−43547
drive system, slip power recovery scheme with PNM converter in rotor circuit 88−55651
electric drives, controlled, with high compatibility between invertor and induction motor *(Czech)* 87−9883
electric drives, variable-frequency, for centrifugal pumps and fans, power factor considerations 85−27686
electric generators in power plants, permissible stator and rotor loads 85−48935
electric machine transient build-up modelling *(Russian)* 87−78607
electric machines, energetic characteristics under dynamic working conditions *(Russian)* 88−37174
electric power grid operation, power factor considerations in distortion elimination *(Romanian)* 88−10727
electric vehicles, battery charger with transformer isolation, sinusoidal input current and max. power factor 86−61785
Electricite de France tariffs, new structure, financial impacts *(French)* 85−4557
electricity tariffs in Italy, effects of legislation *(Italian)* 85−59632
epoxy condenser bushings, power factor and partial discharge values after ageing 85−38541
equivalent power factor for time-varying load *(Chinese)* 87−50676
fixed filter-thyristor controlled reactor compensator for power factor improvement, performance and anal. 87−58162
fluorescent lamp electronic ballast, features and advantages over conventional types *(German)* 85−27755
flyback AC-AC convertor, PWM switching techniques 87−43224
four quadrant AC motor drive, power factor improvement, online optimised pulse pattern 88−24189
four-quadrant AC motor drive power factor improvement and pulse pattern optimisation 86−70910
French TGV Atlantique synchronous-motor traction chain *(French)* 87−51561
glass industry power factor correction for thyristor power controllers 88−43513
HID lamps, power meas. for high-freq. operation *(Japanese)* 86−19592
high-efficiency and standard three phase induction motors, transient inrush currents 86−45417
high-performance invertor-fed synchronous machine control concepts compared 87−22291

power factor continued
high-performance permanent-magnet synchronous machine development 87−42876
HV fuse-link/contactor combination optimisation rel. to power factor and manufacturing tolerances 87−72347
HV power measurements at very low power factors, instrumentation using current comparators 86−39256
induction generator running in parallel to utility power networks 86−26037
induction generators, three phase, adaptive power factor controller 86−33387
induction motor, 3-phase, small, controller/compensator for speed/power factor control 85−21624
induction motor, invertor-fed, simplified analysis of output line currents 85−21625
induction motor drives, slip power recovery scheme with improved supply power factor 86−13129
induction motor maximum capacity in extended network *(Russian)* 86−19273
induction motor performance with saturistor transformerin rotor circuit 86−61519
induction motor power factor, determining parameters, reactive power minimisation *(Portuguese)* 85−38980
induction motor power factor and efficiency characteristics 86−51617
induction motor thyristor phaseback voltage controller, power-factor control scheme 87−30568
induction motor with specified load duty cycle, effective power factor eval. 87−15750
induction motors, power factor controllers, markets and performance 85−65407
induction motors, power factor controllers, markets and performance, laboratory tests 85−65409
induction motors, shaded-pole, single-phase, with nonuniform airgap, anal. of power losses, efficiency and power factor *(Polish)* 85−53711
induction motors, three phase with anisotropic core, operational parameters *(Polish)* 88−55355
induction motors fed by power factor controllers, voltage control for best efficiency 86−33399
inductor motor, slip power recovery, static Scherbius system 87−64581
industrial plant distribution systems, harmonic resonance prediction and solution 86−39133
industry power factor improvement by correct choice of capacitor 87−43669
invertors with improved energy parameters, analogue computer modelling *(Russian)* 86−6877
KASKAD 8A slip recovery electric drives, features giving improved performance 85−32722
laser productivity and utility loading assessment 85−2453
linear induction motor, magnetising current compensation for power factor improvement 86−33436
load flow programs for cement plant design and modifications 86−18652
low bus voltage in composite system adequacy eval. 87−78095
m-phase dependent invertors, with arbitrary control law, power characts. anal. *(Russian)* 85−60291
multiparallel asymmetrical cycloconverter having improved power factor and waveforms 87−30772
nodal active/reactive power injections online forecasting strategy 86−56395
Nola power factor controller for induction motors, limitations study 86−51633
nonsinusoidal systems, time-domain and frequency-domain approaches 86−25487
peak power factor reevaluation allowing for probabilistic nature of load graphs *(Russian)* 88−23254
permanent magnet generator, high-speed, load performance eval. using finite elements 87−30518
phase-controlled cycloconvertor, line commutated, input displacement factor and power factor *(Polish)* 87−43180
power station induction motors load factor determ. *(Russian)* 86−61317
power system computer control, short term forecasting of nodal active and reactive loads 86−70641
power system energy improvements using shunt capacitor banks 88−23310
power system nonsinusoidal and asymmetric operation, definition of power factor *(Rumanian)* 87−30043
power transmission line power losses reduction, by limitation of voltage drops *(French)* 85−38505
PWM control techniques for rectifier filter minimization 85−5259
PWM controlled AC/DC convertor, three-phase, control techniques 86−45578
PWM current source rectifier with sinusoidal line current, microprocessor based 88−30891
reactive compensator, microprocessor based high-speed system 85−64840
reactive power, automatic compensation in supplying elec. nets 85−9488
rectifier power factor compensation using tuned capacitors 88−30809
reduced frequency power sources for industrial ore-reduction furnaces, regulation characts. 87−9655
regenerative controller for voltage source invertor drive 86−45749
reliability optimisation of power supplies, w.r.t. economics *(Czech)* 88−68775
reluctance motor, high-efficiency, design and steady-state performance 86−45386
Scherbius cascade system power factor improvement by forced commutation convertor 86−70909
Schrage motors, tertiary capacitor tuning for improved performance 86−12763
self-compensating high-power factor AC voltage controller cct. 86−40892
short-circuit test circuits, power factor determ. *(Polish)* 88−49500
shunt capacitor for leading reactive power in power systems 88−68796
single-phase bridge rectifier with inductive-rectifying shaping of input current *(Russian)* 87−44539
single-phase induction motor efficiency optimisation model 87−72149
solid-rotor variable reluctance motor flux computation for optimal performance 87−22274
squirrel cage induction motors velocity control using dielectric amplifiers *(Russian)* 87−4711
superconducting magnetic energy storage power system characts. 87−36178
switched reluctance motor elec. and mech. characteristic expts. 88−17568
synchronous generator rated power factorspecification 86−33349
synchronous machines, 6-step convertor fed, design study 86−56729
synchronous machines, AC excited, voltage characts. anal. 85−48946
three phase inductor fed switch mode rectifier convertor 87−64692
three phase offline switching power supply, unity power factor, low telephone influence factor 87−30810
power factor continued
three-phase controlled current PWM converter with leading power factor 87−43201
three-phase controlled-current PWM convertor with leading power factor 86−45553
three-phase electronic voltage regulators for high-power-factor industrial heating *(French)* 88−62784
three-phase induction motor design for optimum efficiency 87−42990
three-phase induction motor efficiency optimisation model 86−12826
three-phase multidisc reluctance generator test results 87−51180
thyristor phase modifier with compound PWM circuit 85−49012
thyristor three-phase forced commutated AC/DC convertors, PWM patterns 87−15865
time-dependent M-phase convertors with arbitrary control law, power indices anal. 85−60298
transmission network calc., current balancing for 3-wire or 4-wire systems *(Russian)* 85−15556
unbalanced three-phase system power factor definition *(Rumanian)* 86−70584
uncontrolled 3-phase bridge rectifier with capacitive load, effect of supply regulation and power factor 85−61105
unity power factor single phase power conditioning 87−78791
utility interface, state-of-the-art power conditioners 86−6645
valve motor, rectified current linear modulation characts. eval. *(Russian)* 85−15991
voltage source invertors, online pulse pattern optimisation using PROMC 86−45562
voltage type PWM converter, power factor and DC voltage control 88−75751
watthour meters, induction-type, single-phase, harmonic content effect on accuracy *(Japanese)* 85−26357
Fe saturated magnetic cores, flux-wave penetration 87−12056

power factor correction
3-phase solid state power factor compensator and harmonic suppressor system, anal. design 88−54869
6 kV power system reactive power compensation, chemical plant power factor improvement 86−25492
12-pulse reactive power compensator for power factor correction appls. 88−68780
25 MW thyristor-controlled drive for natural gas transit system compressor 86−52092
110/20 kV Samobor transmission network, Yugoslavia, power factor correction methods *(Croatian)* 88−42780
161 kV, 25 MVAr voltage transformer explosion investigation, EMTP study *(Italian)* 88−17687
500 kV substation static thyristor compensation regulator *(Russian)* 87−78814
1150 kV AC transmission lines, carrying capacity improvement using reactive power sources *(Russian)* 86−44950
1150 kV intersystem tie line stability, electrical fault containment control *(Russian)* 87−15167
AC adjustable-speed drive invertor power factor and noise problems and countermeasures 87−78614
AC distribution network power factor improvement using LT capacitors 88−61778
AC electric locomotive, 25 kV, 3000 kW, DDC, power factor corrective filters and monitoring system 87−51541
AC power systems, reactive power compensation using power MOSFET invertors *(Korean)* 88−10755
active power and automatic freq. regulation system, correction system synthesis *(Russian)* 87−50670
adjustable speed drives for residential heat pumps 87−9897
advantages and savings in Zimbabwe 87−9116
agricultural motor and system power factor improvement capacitors 86−7353
alternative, cost effective applications of power factor correction 88−30324
arc furnace reactive power compensators, meas. system and predictive control 86−71151
asynchronous generator use at small hydroelectric power station *(Czech)* 86−25944
automatic power factor correction to cut power costs 87−4232
battery chargers for electric vehicle, current control effect on system harmonics and power factor 87−30843
beverage related processing industries, energy conservation achievements 87−16226
calculations, HV and LV techniques 85−64796
capacitor advantages for reactive power compensation 87−50673
capacitor bank mechanical switching for reduced costs and losses 86−44935
capacitor bank switching circuit-breaker requirements and selection criteria 86−12950
capacitor selection for motors and power factor correction in industrial plants 85−44136
capacitor unbalance protection during reactive power compensation *(Romanian)* 88−57013
capacitors, anal. 85−43560
Central Queensland railway 132/50 kV traction system supply planning 86−33763
centrifugal pumps/fans variable frequency drives and power factor 85−53880
contactors for power factor correction condensers control *(Italian)* 88−75859
controlled thyristor bridge, power factor improvement 86−12940
controller to overcome high inrush currents 88−61819
cos phi for large industrial consumers of electrical power *(French)* 87−78000
cost effective appls. of power factor correction using capacitors 87−78008
current source inverter, twelve pulse, in DC link between wind plant and power grid 86−66008
current source invertor fed induction motor drive with power factor control, microprocessor-based system 87−31029
dedicated transformer substation, automated monitoring system *(Chinese)* 88−62533
department store chain corporate energy conservation programme 87−80
digitally controlled power factor correction system 87−57555
distorted bus voltages, power factor correction, capacitor optimisation 88−23247
distribution feeder reconfiguration and volt/VAr control in normal operating conditions 87−78105

power factor correction continued
distribution line losses reduction by capacitor placement using VARSITI computer program 87−57633
distribution network modelling for harmonic distortion studies 87−78082
distribution network power factor correction using static capacitor banks *(Russian)* 86−61129
distribution network power factor correction using capacitor switching, real power reduction study 88−61816
distribution network reactive power compensation using static compensators *(Russian)* 87−35618
distribution networks, reactive power, estimation of optimum regulation of flow *(Spanish)* 87−30172
distribution networks harmonics reduction, power factor improvement with current control in power convertors 86−65696
distribution radio control system for voltage correction 86−44860
drilling installations, supply compensation equipment *(Romanian)* 88−61797
dual power convertors, extinction angle controllers for reactive power compensation 88−69587
electric arc furnaces, economic anal. of SVC appl. 88−49296
electric charges saving system by automatic power-factoradjustment in refrigeration *(Japanese)* 86−18716
electric drives, variable-frequency, for centrifugal pumps and fans, power factor considerations 85−27686
electric railways, power factor improvement of substation rectifier circuit *(Japanese)* 86−7228
Electricite de France procedures *(French)* 87−64082
electronic equipment power supply intelligent inrush current eliminator 86−52680
electronic motor control equipment, active filters for waveform and power factor correction *(Italian)* 87−45031
energy saving for motors in British industry 87−15634
equal-tap capacitor control: modeling and solution 86−70602
expert systems approach 85−48554
FC-TCR power factor compensators, performance, source impedance effects 86−18705
ferromagnetic power factor correction equipment modeling for power system *(Russian)* 88−48489
filament lamp continuous dimmer circuit harmonic characteristics *(Japanese)* 87−43634
fixed capacitor-thyristor controlled reactor type of power factor compensator 85−59598
fixed filter thyristor controlled reactor compensator for power factor correction, source impedance effects 85−21091
fluid catalytic cracking power recovery train, induction generator/motor instrumentation and control 87−51674
Fota Island (Eire) 50 kWp photovoltaic array field experience 86−45276
French power system, reactive power compensation and voltage control of large meshed networks 88−68830
French TGV rolling stock modifications for Atlantic services 85−53895
glass industry, thyristor equipment power factor correction 87−43714
harmonic analyser aided variable-speed drive development 88−18131
harmonic distortion propagation in distribution systems with utility interactive photovoltaic systems, simulation program 88−17129
heavy industrial consumers, power factor correction, phase changing elements *(French)* 88−17069
high power variable speed drive, comprised of high freq. AC link power convertor with induction motors 85−39236
hot strip rolling mill, static VAr compensator for power factor and harmonic current improvement 86−45850
HV network compensation inductor disconnection overvoltage theory and meas. *(Spanish)* 88−75166
HV network voltage and power factor optimisation *(German)* 86−32720
HV power systems, perform. improvement using reactive power compensation 88−68817
HVDC link with static VAr compensators in weak AC systems, analytical study 88−54972
hysteresis motor with short duration overexcitation, automatic operation 85−5063
induction generator energy recovery systems, applications and control considerations 85−27422
induction generators, typical appls. and control system considerations 85−27416
induction heating using thyristor convertor, inductor reactive power compensation 86−45821
induction motors, power factor improvement, microprocessor controlled fixed capacitor thyristor controlled reactor compensator 88−48984
inductor motors, reactive powers compensation by thyristor-capacitor plant *(Russian)* 85−21610
industrial, pitfalls to avoid 86−12254
industrial distribution network voltage regulation *(Russian)* 86−18812
industrial networks, power factor control *(Slovenian)* 86−18795
industrial phase control, capacitor bank calc. and selection for power factor correction *(Italian)* 88−68730
industrial plant reactive power compensation modernisation, economic and technical advantages *(Italian)* 87−71484
industrial power networks, harmonics and power factor correction 87−21924
industrial system power factor correction using capacitor banks, choice and installation *(Italian)* 88−10700
input AC harmonic-reducing DC automatic voltage regulator *(Japanese)* 86−26156
instantaneous power factor compensation and thyristor flicker corrector *(Japanese)* 86−32684
intelligent digital firing controller for bridge connection power factor improvement 86−66381
iron works dynamic compensation of reactive power by thyristor system *(Croatian)* 87−72625
KELAG online network security calculation program experience *(German)* 86−25514
LC compensator for nonsinusoidal situations, comments and reply 87−15180
LC compensators, optimum combination for power factor compensation at linear loads 87−57484
light-triggered thyristor with internal overvoltage protection 87−64718
load compensation of single-phase nonsinusoidal system 85−4554
local power area, interconnected, reactive power compensation using superconducting magnet-invertor/convertor unit 88−23313
long-distance AC transmission systems, technical and economic aspects *(Italian)* 86−44951

power factor correction continued
long-distance transmission network reactive power compensation exercise *(French, English)* 86−61114
low-harmonic GTO converter for power factor compensation 88−75059
LV networks supplying DC motor drives, power factor compensation *(Italian)* 85−48550
LV power capacitor protection by HRC fuse and pressure-operated membrane *(German)* 87−64765
mains distortion voltage, source and control 87−21883
meshed network reactive power compensation exercise *(French, English)* 86−61113
microcomputer controlled GTO convertor for reactive power compensation 86−70984
mining shovel power factors regulator development and simulation results *(Japanese)* 86−19696
modern capacitors for high voltage applications *(Hungarian)* 85−44138
modular drive system for short-circuited induction motors power factor correction *(Polish)* 87−36184
monitor for industrial loads, microprocessor-based 86−39038
MOSFET multiple output flyback switching supply, power factor correction 86−34534
multiprocessor-based UPS. design, implementation 88−75774
network voltage control and emergency measures *(French)* 86−44888
nonsinusoidal power transmission systems calc., time-domain and frequency-domain approaches 86−6238
nonsinusoidal system reactive power definition and compensation *(Polish)* 86−6267
nuclear plant power factor correction, technical problems, economic benefits 87−71872
oil drilling rigs, power factor correction in 3-phase rectifier systems 88−55763
optimal power factor correction for nonsinusoidal power systems, identification method 85−43544
optimal power flow and reactive compensation using Newton's method and penalty function *(Chinese)* 87−50677
optimum shunt capacitor for power factor correction at voltage distorted buses 87−35560
overvoltage effects on shunt capacitor banks and associated equipment 86−6398
periodic nonsinusoidal systems, power theories 86−56355
PLYCOS and SYNCOS compensating system, Czechoslovak development *(Czech)* 85−21081
plywood/hardboard mill elec. efficiency study 86−7347
pole-top power-factor-improvement equipment evaluation 85−64928
power capacitor fundamental properties and applications 86−6962
power consumption improvement by selection of electric drive 86−52086
power freq. tripler, input PF and efficiency improvement using tuning-out LCR filter *(Japanese)* 88−17071
power network reactive power distribution optimisation, calc. of per-unit increases in losses *(Russian)* 85−43580
power network waveform distortion reduction, filter compensation plant parameter calc. *(Russian)* 86−39099
power rectifiers, design of power factor compensation 86−70974
power supply harmonic disturbance limits and capacitor currents withseries resonance 85−59679
power system operational improvement associated with new technologies 86−65608
power system periodical nonsinusoidal operation, math. separation of current, voltage and power in orthogonal terms *(French)* 87−15132
power system power factor correction source location, optimisation method *(Russian)* 87−9100
power system reactive power and harmonic compensator using static induction thyristors 88−68838
power systems, interconnected, PF control based on deadbeat controller, multivariable structure system approach 87−71542
power systems, optimal operation, accounting for active power losses in reactive power sources *(Russian)* 85−43539
power systems, power factor correction methods and develops. *(German)* 88−42776
PWM invertor as supply and for power factor compensation *(German)* 86−45525
railway electrification, voltage drop compensation and substation introduction 86−66462
railway traction, thyristor converter DC drives, power factor and harmonic content consideration 88−5975
reactive current compensation for power convertors, equipment installation methods *(German)* 88−42772
reactive load compensation in transformer substations, appl. in agricultural power requirements *(Russian)* 87−72642
reactive power calc. method, appl. in power factor correction of industrial installations *(Italian)* 88−6055
reactive power compensation, dynamic computer-based method *(Spanish)* 86−25512
reactive power compensation units for reduced industrial energy costs *(German)* 88−68771
reactive power redefinitions for power factor correction criteria *(Rumanian)* 86−25511
reactive power source location calc. based on quadratic programming *(Russian)* 86−32680
reactive power static correction, by medium voltage thyristor valves *(Italian)* 85−27495
regenerative braking thyristor convertor power factor improvement by continuous current and voltage transformation *(Polish)* 86−13143
Romanian national grid, connection of wind farms *(Romanian)* 87−64488
rural distribution networks, power capacitor utilisation for economic power factor correction 85−15580
series capacitor compensation, resonant frequency problems and countermeasures 86−61120
series compensation system using superconducting magnet energy storage 88−54886
series resonant convertors for reactive power compensation 88−30799
single-phase AC locomotive power factor improvement filters 86−71113
single-phase induction motor voltage controller with improved performance 85−9909
single-phase PWM invertor, SIT, microprocessor-controlled, solar energy system appl. 86−51791
static compensation of the reactive power component *(German)* 86−32668
static drive, large, reactive power compensation 85−5415
static Kramer variable speed drives with controlled flywheeling 86−7213

power factor correction continued
static reactive power source, dynamic props., boosted control with proportional-integral regulation *(Russian)* 88−30248
static VAr compensator and series capacitor capabilities 86−65637
static VAr compensator commissioning tests at Langdon (Alberta) substation 87−9633
static VAr compensator for transmission line loss minimisation 88−69005
static VAr compensator thyristor stresses and protective system design 86−70728
static VAr compensator with asynchronous generator 86−70659
static VAr compensators, optimal control for power line loss minimisation 88−68766
static var compensators, simulation using EMTP program *(Japanese)* 85−32574
static VAr compensators for AC transmission 86−39091
static VAr compensators with fast acting control scheme 87−9078
static VAr compensators with thyristor-controlled unsaturated and saturated reactors 86−70645
static VAr generator specification factors 86−44933
static variable reactive power control system using twelve-pulse arrangement 85−9508
steady-state system reactive power flow analysis *(Spanish)* 86−25520
steam power plant upgrading and controls for pulp mills 85−5590
substation filter reactors for powder factor correction and harmonic suppression, efficiency improvement *(Russian)* 88−49099
subsynchronous valve cascade connection with improvedpower factor *(Polish)* 86−18653
switch mode rectifier AC/DC convertor 87−30777
switchboards for power factor compensation *(Czech)* 88−30942
switched capacitor bank relay control for power systems appls. 88−54949
switchgear station series capacitor characteristics and transmission capacity improvement *(Japanese)* 87−30879
switching power supplies for computers, active power factor correction 88−17725
switching power supply, active power factor correction, simplified control algorithm 86−34532
synchronous machines for power-factor correction *(Chinese)* 87−50612
synchronous motors, reactive load compensating capability *(Russian)* 88−17559
synchronous motors, unity power-factor controller, construction and expt. results 87−78639
telephone exchange, power factor rate schedule 86−25524
telephone lines inductive interference from power factor correction capacitors 85−42411
textile mill electric energy conservation achievement 85−49233
three-phase high-speed reactive power compensation by current invertor circuits 86−70600
three-phase networks, reactive power compensation on electrified railways *(Russian)* 86−13139
three-phase power line conditioner for harmonic compensation and power factor correction 88−30261
three-phase rectifier systems used in oil drilling rigs, power factor compensation 87−43725
thyristor compensators design, phys. modelling and full-scale laboratory tests *(Russian)* 86−61041
thyristor drives and equipment, reactive power compensation 88−43430
thyristor invertors using GTOs and AC filters for power factor improvement 88−70531
thyristor-switched reactive power compensator, cybernetic model of phase control system *(Russian)* 88−30302
traction transformer substations, load balancing and reactive power compensation equipment *(Russian)* 88−49094
triple frequency changer, power factor correction by forced reactive power circulation *(Japanese)* 86−51766
UK substations, predicted and measured values of harmonic impedance 85−60268
VAr compensation using three-phase current source for commutated PWM rectifier 87−78787
vibratory drive systems, mech. power factor correction method 86−33754
wind electric energy conversion system, induction generator based system, economic feasibility anal. 87−30473
wind electric energy conversion systems using induction generators, economic feasibility 88−37126
workshop substation capacity and number optimisation *(Russian)* 86−33464

10 MJ cryogenic inductor for EM launcher power supply 87−26676
400 kV compensation choke coils, calc. of multistage switching effects *(German)* 86−19332
aircraft computer power supply with a ferroresonant stabilizer *(Russian)* 88−74938
chokes, DC current magnetised, in parametric current sources, nonlinear characts. *(Russian)* 85−44040
chokes for thyristor controlled DC drives, design and calculations *(Polish)* 85−5152
cryogenic inductors as for electric railgun battery power supply 85−2514
electric machinery EM anal. in 3D 86−61556
EM fields around power system inductors, possible reduction rel. to pacemaker interf. 85−39080
ferrite core material range from Siemens, power transformers and inductance coils appl. *(Italian)* 86−42138
forced-commutation circuit inductor and transformer specification and design 87−31722
gapped core inductors, fringe field effects and effective inductance calc. 86−26107
HF induction heating, power transmission economics *(Czech)* 85−53928
homopolar generator-charged energy storage inductor for transferring energy via transfer switch to rail launcher 85−2515
HV network compensation inductor disconnection overvoltage theory and meas. *(Spanish)* 88−75166
inductive energy accumulating unit for testing AC circuit breakers 88−43329
inductive energy accumulator appl. in synthetic test circuit for VVN-220 air break switches 88−43328
inductor-converter bridge anal. using state-space averaging technique 88−75741
Meatgrinder circuit for resistive and varying inductive load energisation 87−26691
multilayer cryoresistive inductor for inductive heating, electromagnetic force anal. 86−39885
multiple air-gaps mag. cct. design for switching power convertors 86−63928
powder metallurgical processing 87−30718
power reactors, inductance calc. *(German)* 88−49018
power transistor switching speed, speed-up inductor effect 87−72200
pulsed power supplies, capacitor and inductor linking and pulse generation 85−39105
rail gun, homopolar generator, storage inductor and opening switch system testing 87−26726
railgun, switching of current from inductive store, energy considerations 85−2516
refractory erosion in channel furnaces for Al smelting 86−66488
resonant inductor for VHF power supply 86−46545
RF series inductors, design procedure 88−12642
room-temperature inductors as for electric railgun battery power supply 85−2514
selection and sizing criteria for power inductors 85−5163
sinusoidal PWM invertors, control strategy 86−45558
slab-heating square inductor vibration and acoustic analysis *(Russian)* 87−36252
solenoid type inductors, optimum parameter calculation *(Russian)* 88−37270
static compensators 86−12331
storage of electric power, complex simulation *(Russian)* 88−75954
superconducting inductors as inductive stores, for electric railgun battery power supply 85−2514
switched mode supply control using VAC inductor *(French)* 85−60230
three-phase inductor torque calc. 85−27453
Fe oxidized powder cores for slim profile power inductors 87−22460

power integrated circuits
1 MHz switching power supply circuits 86−7953
2.0 kVA fully integrated PWM motor controller using power ICs 88−11181
2 kVA PWM motor controller using bipolar power ICs 88−71762
2-phase microstepping motor, drive system and control IC 87−51281
3- and 4-phase brushless DC motor controllers using PWM 86−35837
3-phase DC brushless motor with SMARTPOWER control/drive IC 87−51237
3D HV CMOS ICs by recrystallised SOI merged with bulk control unit 88−39702
3D integration using SOI structures, technological key points and possible appls. 87−46244
3D-SOI intelligent power structures 87−38590
8 MHz integrated video output amplifier 86−11258
8-A H-bridge in plastic packages with isolated substrate 87−66782
8-bit μPD6345C/GS latch driver, review *(Japanese)* 88−20043
25-W driver IC for 3-phase brushless DC motors 86−35858
90 V switching regulator and lightning protector chip set for transformerless SLIC appls. 87−20305
100 A, 500 V n-channel enhancement-mode power MOSFET module 88−24993
100 kHz SMPS using an emitter driven Darlington transistor 87−51370
150 W HF power supply using ICs 88−75811
150 W op amp 86−8031
200 V MOSFET for IC use, design aspects *(German)* 86−21836
220 V mains, 500 kHz class-E convertor using cascoded BIMOS 86−7974
250 V monolithic complementary MOSFET LSI with n^+ buried-layer protected CMOS logic 87−23933
325 kVA bipolar power transistors for motor drive applications 85−6909
350 V analog-digital compatible power IC technologies 86−47781

power integrated circuits continued
400-V 20-A novel dielectrically isolated intelligent power IC technology using vertical lateral composite structure (VLCS) 88−39726
500 V, BiMOS, high voltage IC with depletion layer insulation *(German)* 85−10989
500 V BIMOS technology and appls. 86−9251
500 V junction-isolated BiMOS HV IC, development 85−17156
500 V self protecting MOS transistor on IC 88−57640
500V dielectric isolation process for very highvoltage integrated circuits 87−1721
850V NMOS driver with active outputs 85−50732
1200 V HV IC technology, theoretical and expt. study 87−46124
actuator power transconductance H-bridge driver IC 88−12221
advances in power semiconductor devices: an overview 88−57754
Am7936, Am7938 subscriber and exchange power controllers for ISDN 85−61185
amplifiers, monolithic design using isolated collector vertical p-n-p technology 87−23966
Analog Devices AD587 reference voltage circuit *(French)* 88−50016
analogue-digital compatible power ICs, 350 V, dielectrically-isolated substrates 87−32676
application extension with development of high power and functional devices *(Japanese)* 87−65828
ASICs using SBIMOS technology for smart power devices using combined analogue/digital components *(Italian)* 88−71646
ASICs with power capability, technological aspects *(German)* 88−44803
automatic placement algorithm for optimising thermal behaviour of hybrid circuits 88−1278
automobile alternator voltage regulation using monolithic ICs 88−69884
automobiles, smart power devices 87−79189
automotive multiplex wiring systems, smart power device appls. 88−5989
battery charger using ICs for Pb-acid batteries 86−26187
Bi-CMOS electronic vol. IC technology and appls. 88−50969
Bi-CMOS thermal head intelligent driver with density controllers for fulltone rendition printers 87−60587
Bi-MOS power IC for stepping motor control 88−75662
Bidfet devices 225 V output, symmetric row drivers for thin film electroluminescent displays 87−29204
BIMOS, interconnection of unipolar and bipolar power transistors *(German)* 86−15193
BIMOS, TTL compatible input cct. 86−21693
BiMOS merged technology for custom and semi-standard power interface ICs 87−1632
BiMOS power devices, development and performance *(Japanese)* 86−35625
BiMOS-II a smart merged technology. For high current drive applications 88−7704
bipolar Complementary Transistor Switch cell, sub-isolation diffusion guard ring 85−28350
bipolar ICS, parasitic MOS device detection with computer layout anal., MOSBUSTER 87−67541
bipolar ICs, polysilicon-on-oxide isolation struct. 87−74410
bipolar power ICs, nonplanar multiple epitaxy process 87−67534
bipolar-CMOS-DMOS IC technology with dielec. isolation 88−26386
bipolar-CMOS-DMOS technology, HV, subthreshold characts. of DMOS and CMOS transistors 87−74383
brushless, single-chip IC including Hall effect sensor, logic, and power technology 88−75639
brushless DC motor driver IC 87−43088
brushless DC motors, drive system, for video tape recorders *(Japanese)* 88−24198
brushless motor control *(Italian)* 87−43110
BTS 412, a novel SMART SIPMOS switch 87−46239
building block approach to motion control systems 88−5814
bulk-power-handling electronics device development 87−44547
bus controlled power driver circuit 86−34531
CAD, network representation lateral insulated-gate bipolar transistor structures 88−39393
CAD of power semiconductor devices 86−27057
car radio stereo amplifier, construction project 86−24183
ceramic-coated metal substrates in hybrid IC 88−1271
characteristics of semiconductor power switches *(German)* 85−6142
chip packages, thermal response anal. 85−50625
class E converter, 220 V, 500 kHz using BIMOS 88−5765
closed-loop power electronic systems, sensitivities computation with respect to conduction time 88−70537
CMOS 30 V row/column driver for flat-panel liquid crystal displays 87−63465
CMOS circuits, dynamic power consumption estimation 88−26530
CMOS high power driver IC simplifies interface problems 87−44601
CMOS IIE, deep-drain-extension implant technology for analogue/digital ICs 87−25576
CMOS logic and DMOS output, power control 85−17155
CMOS/DMOS combination in bipolar technology *(Italian)* 87−67328
colour TV tube integrated video output stages for direct driving of cathodes 86−8704
COMFET power switch, development *(French)* 87−16853
common drain power MOSFET gate drive solutions 87−46038
commutator based on UAA 4002 bridge circuit *(Italian)* 86−716
compatible IC support for the RS-232-C and its derivatives 87−5652
components for power supplies 85−10977
controllers for flat-panel displays, selection criteria 88−53770
cooling and heat spread model 88−43713
cooling characts. of diamond-shaped interrupted cooling fin for high-power LSI devices 87−43985
current source ICs for hybrid D/A convertors *(German)* 88−6662
current-sourcing power ICs 86−58510
custom IC, conf., Rochester, NY, USA (May 1986) 86−66546
custom power hybrids designs and manufacturing techniques 86−20993
custom power supply IC for Ford engine control module 86−40262
D/CMOS−integrating power and logic 86−9301
D/CMOS high-voltage multiplexer, function-isolated/dielec. isolated compatibility 87−32689
D/CMOS technology, smartpower processes 87−1778
DC motor drives control using SMART power IC 87−51520
DC motor sensor engineering and output *(German)* 88−69403
DC servo and stepper motor motion control systems using building blocks 88−75669
DC-DC converter chips, appetite curbed using CMOS 86−20252
DC-DC flyback convertor, Siliconix Si 9100 single-chip device using D/CMOS technology *(Italian)* 88−18904

power integrated circuits continued
DC-DC solid-state, universal input, fixed output convertor 87−65846
deflection-yoke drive design using power op amps 87−44605
detector of over/under voltage *(French)* 87−23924

MOS monolithic IC power switch for automotive applications 87−22880
MOS power technologies, discrete and integrated 85−40767
MOS-bipolar HV power semiconductor switch with GTO thyristor 88−20063
MOSFET 86−2364
MOSFET and IGT power semiconductor technology 87−74396
MOSFET devices with integrated intelligence *(French)* 86−46550
MOSFET power interface circuits for motor drives 87−44597
MOSFET/bipolar combination, technology and performance *(Spanish)* 86−21694
MOSFETs, output charact. stabilisation technique using temp. compensation 88−64553
MOSFETs handle higher power, power IC modules 87−45976
MOSPOWER bridge circuits for motor drives *(German)* 88−31066
motion control and power electronic appls. 86−62438
motion control IC technology 88−1759
MOTOCONIC, AC motor control IC with digital PWM for variable speed AC drives 87−58029
motor control methods, conf., Long Beach, CA, USA, (Sept. 88) 88−70018
motor controller using MPC 1710 surface mount package 88−71741
motor driver ICs, development 86−7951
motor drives, variable speed, Darlington power module appls. 87−51518
motor position control, power IC packaging technology 88−63504
motor voltage controller IC for half 'H' bridge operation 88−75568
motor-control semiconductors drive motor revolution, review 88−50008
MPC1500 high power switch chip, logic to load interface 85−28440
MPC 1602 8 A, 250 V smartpower control IC for on-board power conversion 88−71820
MPD8020 HV array adds semicustom chips to a power designer's toolbox 87−65808
multichannel 300 V level translator chip in junction isolated CMOS technology 87−60677
multidiode integrated protection circuit 85−11566
multiposition switch and forvistor, power integrated devices with spatial coupling forautomation systems 86−21466
Multipower BCD: a new frontier in power integrated circuits 87−38504
Multipower BCD, a versatile technology from 60 to 250 V that integrates bipolar, CMOS and DMOS devices 87−38503
Multipower BCD and VIPower technologies, design of high-side drive 88−39650
multipower BCD high efficiency mixed technology motor driver IC 86−35836
multipower BCD technology, combination of bipolar linear, CMOS logic and DMOS 87−32602
Multipower BCD technology power D-MOS device modelling and simulation 88−13600
NE5570 monolithic CMOS controller for three-phase brushless DC motors 87−78693
new intelligent power components 87−37638
NMOS HV integrated device, dual-gate, free of negative resist. breakdown *(Chinese)* 88−7753
OCI '86, conf., Boston, Ma, USA (Oct 1986) 87−43798
off-line power supply using CMOS current mode IC 87−59172
op-amp, LH0101, config. and appls. *(German)* 88−18933
operational amplifiers benefit from integration and conquered thermal problems 85−61125
overview of power semiconductors and ICs 88−56445
packages, thermal response anal. 86−61933
packaging, solder fatigue problems 85−23890
packaging and technology developments 86−62436
packaging takes the heat out of chips 87−46054
phase-change cooling of power microelectronics 88−49534
photovoltaic relay, LED/integrated bidirectional MOSFET switching cct. config. for AC/DC loads *(German)* 86−20884
photovoltaic relay, solid-state control using MOSFET power IC 86−27665
planar diodes, breakdown voltage, lateral curvature effects 85−50481
plasma and EL-display drivers, process techniques promising price cuts 86−50152
plasma-coupled devices, charact. and appls., review 86−9281
plastic packages for power ICs with improved mech. performance 86−46111
power electronics, improvements due to advances in semiconductor and IC technology *(German)* 85−32590
power electronics exam. and prospects *(Korean)* 88−18913
power FETs marrying to CMOS gate arrays 86−35863
power hybrid micro-based thermal spreading model for package configurations 87−60033
power MOSFETs, future 86−47635
power packages, types, technology and performance *(Italian)* 87−65207
power supply IC for 120/240 V AC line input 87−65847
protection when operating inductive loads 85−40805
PWB leadless chip carriers for power IC, thermal dissipation anal. 85−34290
PWM ICs, TEA 2170/2162 and 2164, operation and switched-mode power supplies appl. *(German)* 88−12192
PWM ICs for power supply control, product developments *(German)* 87−23899
PWM motor control from CMOS logic signals 86−46530
rapidly solidified solder foil for die attachment appl. 86−46088
regulator IC speeds design of switching power supplies 88−12178
reverse conducting GTO thyristor, 2.5 kV 800 A 86−45543
RF hybrid power module, M57778, design for 900 MHz band personal radio transceivers *(Japanese)* 86−34571

power integrated circuits continued
RGB HV video output amp., single chip 10 MHz 87−10696
RMS-to-DC convertor, 25 MHz, thermal design 87−16879
road vehicles, power MOS device and its future applications 87−74336
rugged power MOSFET designs 87−18121
SC voltage convertor, LT 1054 motor speed servo appl. 88−30818
self-aligned double-diffused lateral p-n-p transistor, high-voltage linear ICs 86−28471
semiconductor devices and ICs, market development, appls. 85−12227
semiconductor devices comparison of different types *(Swedish)* 87−45933
semiconductor modules, reliability test procedures and results 88−31978
semiconductor modules for motor control appls. 85−11009
semiconductor rectifiers, commutation processes at turn-off, modelling 86−33485
semiconductor switching capabilities and characteristics *(German)* 87−16855
semiconductors and ICs 86−52667
semicustom cell-based system 87−73274
semicustom ICs' ratings and architectures aid analog- and digital-circuit designers 88−1698
sense-cell MOSFET eliminates losses in source circuit 86−58470
SGS L 296 monolithic integrated switching regulator, ten appls. *(German)* 85−6143
Si9100, power IC for design of 80% efficient one-watt power supplies 88−7703
Si9100 smart power IC for 0.2 to 2.5 W DC/DC convertors 87−78777
SI 9100 appl. to 1 W flyback convertor *(German)* 88−30813
Si 9100 Smartpower 86−47876
SI-7300 A stepping motor driver IC, switching current control *(Japanese)* 86−28474
SIMOX SOI IC fabrication technology, wafer preparation and appls. 87−74351
SIPMOS intelligent power switch, monolithic device design, operation, protection and performance 87−38553
SIPMOS technology, AC contact and intelligent power switch with self protection *(Danish)* 87−10658
smart interface technology combining gate arrays with smart power in semicustom BIMOS process *(German)* 88−44804
Smart monolithic motor drivers, BiMOS, linear bipolar and I^2L power ICs 86−35838
Smart Power, overview 87−38589
smart power and HV ccts. 88−13599

smart power device testing and economics, ATE system for production testing 87−46146
smart power device testing using ATE 88−31464
smart power devices, with intelligent functions *(French)* 88−44822
Smart Power devices and power transistors, monolithic integration, review *(French)* 87−67215
smart power for motor control 87−38591
smart power IC, 500 V, 25 A 87−25548
Smart Power IC automatic test system 88−71740
smart power IC improves motor drive efficiency 88−63511
smart power IC integrates logic, sensing and power functions to cut fan costs 88−63507
smart power IC testing 88−44807
smart power IC testing 87−73288
smart power ICs, DMOS, bipolar/MOS technologies 88−51026
smart power ICs, future trends 87−1657
smart power in cars 87−46055
smart power integrated circuits need special test systems *(German)* 88−39550
smart power technologies overview 88−7701
Smart Power technology in stepping motors 88−75667
smart power units, testing and applications aspects of power ICs 87−46145
smart SIPMOS technology for microcomputer-compatible intelligent power switches 88−25616
smart-power chips, features and applications 85−28429
SMARTMOS H-bridge for power control of bidirectional DC motor drives 88−62643
Smartpower devices, develop. trends *(Danish)* 88−7646
smartpower devices for easing power loads interfaces 88−7702
Smartpower IC for control, commutation and protection of brushless three-phase DC motors *(German)* 87−30591
SMARTpower ICs; isolation 87−46123
Smartpower ICs modular power SIP 88−1736
SMARTPOWER integrated circuits for switchmode power supplies 87−51367
smartpower technology survey, isolation 88−31995
SMPS, direction for ICs 87−10650
SMPS highly integrates power modules for compact powersupplies 86−34541
SMPS using intelligent power ICs 88−75810
SMT, evolution 87−36510
solder contact technology, high power cycling fatigue stability using Cu-ceramic sandwich 87−46133
solder wetting phenomena under reducing atm., meas. using wetting balance 87−23362
SOLID II HV high-gain kA channel length CMOSFETs with self-aligned ultrashallow junction 86−41980
solid state, high power automotive switch using CMOS-VDMOS technology 86−13152
solid-state power components, HVIC and insulated gate transistors 87−23909
Solitron monolithic semi-custom smart power IC family 88−44862
Spanish market for power semiconductor devices *(Spanish)* 87−59134
Sprague UDN-2917 stepping motor control IC 88−75676
standards cell in CMOS/DMOS IC design 86−709
stepping and DC motors technology and control conf., Boston, MA, USA (Oct. 1986) 87−43799
strategies for power integrated circuits, Smartpower 88−6642
supply control IC for automotive appls. 87−44598
surface mount packaging develops. for power ICs 87−5673
surface sensitivity determ. by controlled surface contamination 87−1619
survey of available products 86−57610
switch mode power supplies, monolithic IC fabrication development 85−28379
switch mode power supply integrated circuits for telephone equipment 86−57645
switch-mode control IC technology 87−67561
switch-mode power supplies, monolithic IC development 86−20307
switch-mode power-supply ICs extend performance boundaries 87−65803
switched capacitors, power electronics appls. 86−62445
switched mode power supplies, secondary control 87−44595
switched-mode power supplies with multiple outlets, appl. of L296 and L4960 monolithic devices *(Italian)* 86−52657
Switching controller chip handles 100 W from a 5-pinpackage 86−20253
switching Darlington with speed-up capacitor 85−28348
switching power supply design with ICs 87−16863
switching regulator, L296 bipolar IC, config. and switch-mode supply appls. 85−44881
switchmode power supplies and power converters, appls. of power ICs conf., Munich, Germany (June 1986) 87−43781
TCA 785, for phase control of thyristor rectifier converter, cct. 86−20296
TDA 4814, for sinusoidal line current consumption, appls. 87−516
TDA-4600 series, reversible rectification transducers with integrated control units *(German)* 85−10986
technologies compared 85−40836
technology, applications and prospects *(Italian)* 86−53715
technology, past, present, and future 85−12230
technology forecast 87−44528
thermal anal., multilayer model 87−52349
thermal resistance of power modules having solder voids, modelling with finite elements 88−11751
thermal rises due to digital device overdriving. II.Results 86−8102
thick film metallizations and performance of a powerhybrid module on aluminum nitride substrates 86−53263
thick-film power hybrid, wire-creep rupture problem, soln. 87−1118
Thomson power hybrid IC technology for military and civil applications 86−67608
three phase brushless DC motors, direct drive and control using monolithic IC 87−51236
three phase control and drive IC for brushless motors 87−15778
thyristor gating ICs for control solutions of construction tools, office machines and home appliances 87−78778
TMOS type TECMOS power components *(Spanish)* 87−38551
TMOS type TECMOS power components, temp. depend. features *(Spanish)* 87−46208
Toshiba HV bipolar IC technology 87−67535
transconductance IC amplifier for servomechanism appls. 88−70554
transient overvoltages protection in lightning flash *(French)* 87−38408
transistor array, Sanken Electric STA341M, design, struct., and charact., CD player appl. *(Japanese)* 87−32679
TSC 170 CMOS controller for SMPS, device perform 88−31996
TWM4 tester for LF power IC testing, test cct. *(Polish)* 88−60565
U002 HF high efficiency mixed technology motor driver IC 87−30661
UAF 1780 IC, switches/convertor config. with low insertion loss *(French)* 87−59140
UC3825 PWM chip controls 1 MHz SMPS 86−34545
UC 1846 integrated circuit for the current mode control of voltage regulators *(German)* 85−10987
UC 3517 smartpower, IC for stepping motor position and speed control 88−71661
UCN-5804B smart BiMOS IC for improved unipolar stepper motor drive 88−49187
UGN-3625M clip with Hall effect sensor for single phase fans 88−71761
ULN-8163A/R monolithic IC for power supply control 87−73289
unipolar stepper motor drive and control with monolithic UAA 2081 IC 87−51282
US semiconductor industry, current-trends, memory, logic, analogue, IC and power MOS products *(German)* 87−11836
versatile 250/300-V IC process for analog and switching applications 87−32601
vertical deflection booster with automatic raster sizecompensation 86−11264
very low drop voltage regulator with a fully complementary power process 87−23936
VMOS power transistor with CMOS control logic, Motorola MPC 1500 IC with protection features *(German)* 85−55945
voids and cracks effects in power chip packages, thermal investigation 87−51880
voltage regulator using magnetic amplifier with UC1838 integrated controller 87−59173
water cooled copper clad invar hybrid power circuit 88−1267
AlN and SiC substrate advanced ceramics for high power and microwave circuitry, eval. 87−73156
AlN power hybrids, new thick-film materials system 87−73927
Cu-Al_2O_3-Cu substrate as base plate of highly integrated bridge-circuits 88−44044
Cu-ceramic composites, direct bonding *(German, English)* 86−46394
GaAs, 1 W DC to 4 GHz MMIC travelling wave amplifier 86−41351
GaAs FETs, low noise, device and IC appls. at high freqs. *(French)* 86−58472
GaAs MMIC, Ka-band, 1 W power, high gain, design and fabrication using Be coimplantation 88−71063
GaAs power MESFET amplifiers at K- and Ka-bands, design and performance 88−63919
GaAs power monolithic MIC, Ka-band, source island via hole structure 86−27626

European Communities' photovoltaic pilot plant acceptance testing and monitoring 86−45274
European Communities' photovoltaic pilot projects, inspections and performance meas. 86−45273
exo-electrons energy meas., using gas flow proportional counter 85−37937
explosive pulse power complex, fibre optic monitoring, pneumatic control links of capacitor bank 88−49169
Federal Aviation Administration radiocommunication link tester 88−46850
FFT-based digital instrument for nonsinusoidal systems 85−37465
fiber optic microwave power probe 87−41481
fibre optic calorimeter/interferometer for CO_2 laser power meas. 87−60891
fibre optic communication system power and attenuation meas. 86−63657
fibre optic measurement techniques, review of methodology 86−65286
fibre optic microwave power sensor using GRIN multimode silica fibre 87−68087
fibre optic power meas. standards accuracy and pitfalls 86−2800
fibre optic power meters, appls. 88−4575
fibre optic power meters, developments 85−62332
fibre optic power meters, round robin testing results 86−65287
fibre optics, power measurements, accuracy 87−38774

power measurement continued
fibre optics testing by power meter 87−18678
flow-through meter for the average power and energy of industrial laser installations 87−75187
frequency convertor efficiency meas. for three-phase induction motor infinite speed control 87−72133
full-wave semiconductor diode microwave power sensing system, RMS response anal. 88−22556
GEKKO XII glass laser control- and energy-measurement systems 88−40190
generating stations, power meas. using process control system *(Russian)* 85−27274
gradient calorimeter for measuring the energy parameters of optical radiation 87−70829
heat-flow calorimeter, random errors reduction 86−31566
heavy electric energy consumers, meas. and logging equipment *(Polish)* 88−10921
heavy-ion beam, absolute energy meas. using resonant time-of-flight system 88−68233
HF power and voltage meas. up to 1 GHz, calibration factor 85−37702
HF voltage and HF power measured perfectly *(German)* 86−70179
HID lamps, power meas. for high-freq. operation *(Japanese)* 86−19592
high power vacuum tubes, static curves meas. *(Polish)* 88−25776
high-power automatic network analyzer for measuring the RF power absorbed by biological samples in a TEM cell 85−3854
high-power microwave sources with over-moded output, power and mode diagnostics 85−52857
higher harmonic filter for secondary power meas. convertor *(Russian)* 86−45035
Howes SWB 30 SWR/power meter 88−36119
HP 81521B and 81520A, precision optical heads for 850 to 1700 and 450 to 1020 nanometers 88−9940
HP 8152A optical average power meter, hardware design 88−10056
HP 8152A optical power meter firmware 88−9871
HP 8757A scalar network analyser 86−70072
HP 8902A receiver, low-level power-meas. techniques and accuracy 88−60808
HV power measurements at very low power factors, instrumentation using current comparators 86−39256
HV system interconnection, energy measuring installations with static meters *(German)* 87−64039
hybrid electronic energy meter design 85−58748
hydroelectric power stations, real time hydraulic turbine efficiency measurement 85−9780
incoherent scatter radar power profile meas., interference detection and correction 86−69804
incremental-motion applications, power-rate calculations to match small motors to applications 85−9936
induction heating, magnetic field and power density distributions meas. on metal 86−45816
induction smelting cct., spectral analysis, output envelope of narrow-band modulated filter 87−45004
induction watthour meter performance harmonic anal. 85−37658
induction-type watthour meter precision determ. using driving torque meter *(Japanese)* 88−17218
industrial consumers, microprocessor based metering 86−6450
instantaneous AC power, oscillographic meas. *(Russian)* 86−38482
instrument transformer errors determ., under operating conditions 85−48044
intelligent AC-DC source, standard for power meas. 87−3408
intense single-pulse microwave sources diagnostics 87−8725
interference recording of laser radiation 87−54388
interference source, radiation characts. error anal., power meas. based 86−3609
ion energy meas. in intense pulsed ion beam 85−4190
IR power meas. by double-resonance phosphorescence depletion in biacetyl vapour 88−27265
IR radiation power, Brownian thermal detector appl. 85−47979
Iwatsu Electric optical power meter, operation and performance 88−4534
Japanese HIOKI instrumentation, Italian distrib. agency for digital display units *(Italian)* 87−28947
joulemeters, calorimetric calibration for use with pulsed UV lasers 88−20726
kilowatt-hour demand meter using an IBM PC, single-phase load appl. 87−28938
LAN, HF noise power spectrum, impedance and transmission loss of power line meas. 88−59638
laser, PI-4 and PI-5 standard primary instrumenttransducers for laser radiation 86−44267
laser, pulsed, output energy meas. using cone calorimeter *(Turkish)* 87−12540
laser beam, meter for relative distrib. of power density 87−68581
laser beam, power detector using balanced bridge network 86−24549
laser beam cross-section relative energy density distrib., given field distrib. form. 85−56765
laser beam energy centre, power and diameter determ. with quadrant pyroelectric radiation detector 86−29029
laser beam parameter meas. techniques 85−51237
laser beam power meter, design using fast photodiode detector 85−24634
laser beam power meter using photoacoustic cell 85−51229
laser energy absorpt. meas. using differential joulemeter and optoacoustic cell calibration appl. 87−29324
laser energy meas. for pyrotechnic ignition, using high-speed thermography 87−14165
laser energy meas. using specialised digital meter, metrological characts. analysis 86−42613
laser power and energy measurements and the NBS lasermeasurement assurance program (MAP) 86−15759
laser power density distribution meter and synchronous detector 85−18985
laser power meas, high precision absolute, using mag. suspended rotor 87−12539
laser power meas., mW level, using calorimeter with isothermal temp. control 88−14255
laser power meas. and testing with optical attenuators 88−65822
laser power meas. in μW range, sensitive calorimeter with isothermal temp. control 87−12546
laser power meas. standards comparison, C-series calorimeter and quantum-efficient photodiode 88−14253
laser power meas. standards scales intercomparison 87−12545
laser power meas. using double calorimeter *(Japanese)* 85−18987

power measurement continued
laser power measurement schemes and expectations 86−63854
laser power measurement using magnetically suspended rotors 88−45503
laser power meter based on photoacoustic effect 88−20716
laser power meter calibration, automatic system with thermopile 86−3267
laser power meters, microprocessor domination 85−24620
laser power monitor for 1 mW to 50 W range, using pyroelectric radiation detector 88−20718
laser power standard, automatic calibration system *(Japanese)* 86−65282
laser power standard, automatic calibration system, expt. *(Japanese)* 87−7425
laser radiation, using straight-through thermocouple instrument 85−12933
laser radiation, wide-aperture meas. facility, sensitivity study 87−61217
laser radiation energy distrib. meas., 400-channel commutator 85−56763
laser radiation parameters measurement in machining lines, meter design 87−35215
laser radiation power meas., up to 10 kW, using water-cooled calorimeter 85−12932
laser radiation power meas., working standard for 0.48 and 10.6 μm 87−68580
laser radiation power units, comparison standard 85−46447
laser radiation spatial energy characts. determ., meas. transducer model 88−9943
load meas., computer-aided evaluation using electronic data gathering equipment *(German)* 86−65786
localized sound power method 86−38621
loss meas. using IEC single-sheet tester 87−63472
losses meas. in residential and commercial electrical wiring 87−21922
LV distribution networks, power consumption guard device *(Czech)* 86−18893
LV metering in France using electronics, energy meas. and distrib. to different tariff rates 87−50908
MANWEB industrial metering policy 86−32874
matrix analyzer for the intensity distribution ina laser beam 86−29216
metallised capacitors, self-healing breakdowns, energy meas. 88−75886
meter air-gap magnetic field study using FEA 88−53760
meter torque-RPM characts. calc. from eddy current distrib. 88−53759
metering developments in France, research initiatives *(French)* 88−61988
meters, class 0.5, verification set-up 85−9556
meters for capacitor power meas., block diagrams *(Polish)* 87−73816
metric system of meas., Worldwide adoption 87−14054
metrological facilities for metering electric energy and their perfection 87−70742
MFJ-949C Versa Tuner II, antenna tuner 87−75637
microcomputer-controlled sampling digital power, r.m.s. and PF meter, design and operation 87−77092
microcomputer-interfaced wattmeter 85−4023
microprocessor appl. 86−61200
microprocessor based metering equipment, testing and repair 85−31332
microprocessor based power meas. *(Italian)* 86−70730
microprocessor controlled parallel processing UPS, adaptive AC input monitoring algorithm 88−30861
microprocessor-based electric power/demand analyzer 88−60821
microprocessor-based meter for power distrib. parameters meas. 88−60818
microprocessor-based peak average demand meters 86−18901
microprocessor-based standard for 47 Hz to 63 Hz range 86−38484
microwave, amorphous semiconductor thermocouple-couple sensor *(Japanese)* 88−16455
microwave, in mm-wave and submm-wave beams, using photoacoustic detection 86−38540
microwave, microcalorimetric technique with X-band load 87−14436
microwave, using microcalorimetric single-load technique with X-band load 88−16460
microwave apparatus, radiated power meas., reverberation enclosure performance 86−5502
microwave beams parameters meas. in open space using large liquid crystal screens 86−50208
microwave capability for AN/USM-410(V) ATE system 85−31584
microwave electrothermal engine, performance meas. 85−20996
microwave freq. peak power meas. *(German)* 86−24722
microwave instrumentation: an historical perspective 85−236
microwave measurement of electric variables, book 86−26536
microwave oscillator/amplifier large-signal load-pull meas., vector error-corrected calibration technique 88−22756
microwave oven power meas. using thermometer with sliding scale 88−24273
microwave peak power meter, Wavetek model 7500 86−5357
microwave power and energy: national standards 86−38536
microwave power detection by optical fibre arrangement 87−14269
microwave power detector using optical fibres, design features 88−22612
microwave power meas. accuracy improvement for automatic module testing 88−36198
microwave power meas. at 15 GHz, international comparison 86−65263
microwave power measurement, principles, sensor types and meas. errors 85−48076
microwave power measurement, standards and calibration 85−43083
microwave power measurement technique at 10 GHz 86−31568
microwave power measurement using optical fibres 88−36061
microwave power standard, using electron beam 88−16459
microwave power standard, using electron beam 87−14433
microwave pulse power meas., pyroelectric receiver appl. *(Russian)* 85−64261
microwave radar and communications equipment, power flux prediction and meas. 85−15011
microwave radiation diagnostics, linear electrooptical effects use 88−36195
microwave six-port reflectometer operation using uncalibrated semicond. diodes as power sensors 85−37738
microwave test and measurement equipment becomes expert 86−31173
microwave thermal noise power standard, Watt unit realisation appl. *(German)* 85−14966
microwave vector analyzer speeds power-sensor calibration results 88−4332
MM and sub-MM wave detection techniques 88−29622
MM wave meas., instrumentation and fundamental issues 87−3734
MM-wave gyrotrons, peak power meas., low average power calorimeter design 88−19599
mode-stirred chamber calibration factor, relaxationtime, and scaling laws 86−24433
modular power supplies, functional testing 85−28371
modulated measuring power convertors accuracy improvement, by negative feedback 88−29574

power measurement continued
monitoring and control measuring instrumentation for power consumption *(Russian)* 86−39250
MT9501A/B/C optical power meter calibration system *(Japanese)* 88−16526
multichannel electrical energy usage recorder with computer memory, design and testing 86−45039
multichannel remote energy metering system error reduction 88−69078
multimeter for optical power and electric variables meas. *(Japanese)* 86−5353
multimode harmonic power measurement of 40 MW pulsedS-band klystrons 86−24731
multiplier using D/A convertors appl. 85−37552
NAP power reflection meter, shortwave power heads 88−36114
national microwave power standard using microcalorimeter 86−38537
natural gas industry, energy flow meas. 86−5599
nonharmonic periodic voltages and currents analysis, diagram of effective values *(Slovak)* 88−68728
nonlinear systems, load susceptance, reactive current and power meas. technique *(Spanish)* 86−5449
nonsinusoidal signals meas., error analysis, requirements on frequency determ. *(Czech)* 86−24641
Norma D5155/5135 current analysers for measurements on single-/multi-phase power lines *(French)* 88−60814
Nye Viking RFM-003 RF power monitor , review 88−73777
optical, Hewlett-Packard instruments for optical links testing *(Czech)* 86−4673
optical, wide dynamic range, using thermal and photoelectric *(Japanese)* 86−31683
optical fibre appls. in power distributors *(Danish)* 88−35334
optical fibre power meters, potential errors in use 88−39930
optical fibre power meters, round robin test of uncertainty 86−42230
optical power measurement with integrated optical waveguide refractometer *(German)* 87−74847
optical power measurements using detectors 88−9979
optical power meter, review *(Japanese)* 88−4538
optical power meter calibration, effect of connectors 87−49971
optical power meter subminiaturization technology 88−4530
optical power tester, portable, from Seiko Instruments and Electronics 85−41157
optical spectrum analyser and power meter, performance 88−4331
optical subscriber cables, measuring equipment *(Japanese)* 87−8258
optical wavelength meter, design and charact. *(Japanese)* 86−31689
optical wavelength meter, using crystal optical rotator and retardation plate *(Japanese)* 86−31459
optimum load distribution from dispatch centre using power and voltage measurement *(Croatian)* 85−9419
overhead transmission line model, instrumentation and data handling 85−15641
passive components, power dissipation meas. using microcomputer based network analyser config. *(German)* 88−60853
peak envelope power measurement, two-tone oscillator construction instructions 86−17991
peak power measurement in military and satellite communication *(German)* 88−47402
peak-power-meas. equipment for EW and satellite communications 88−9878
Peltier oven for thermistor mounts, microwave power meas. appl. 85−64226
personal computer assisted watthour meter test equipment *(Japanese)* 87−21132
phase shifting devices, American national standard for marking and arrangement of terminals 88−30427
photoacoustic cell for laser power meas. 85−41445
photoluminescence power and quantum yield meas. in narrow-gap semiconductors 87−3779
photovoltaic power systems, energy rating meas. using JRC multi-intensity simulator 87−9426
photovoltaic solar cells parameters, calibration and appls. 88−49137
picosecond laser pulses energy meas. using semiconductor switch 86−9930
planar near field techniques for gain and power meas. 88−74576
plasma etching, end-point determination by reflected power monitoring 87−67102
plasma noise power standard calibration, uncertainties and stability *(German)* 85−14967
ponderomotive reaction meas. of torsion balance in dynamic state 88−29573
portable universal recording instruments for current, voltage and power meas. *(Czech)* 85−8888
portable working standard of microwave power in waveguides 86−44407
power convertor, PFM, metrological charact. improvement 87−36022
power meas. and compensation , in nonsinusoidal power systems 88−74546
power system control, dynamic estimator performance 86−70626
power system meas. using optical fibre techniques 86−39247
power system remote measurement calibration 86−61199
power-angle instrument for large synchronous machines 85−4707
power-dip meas. element for power system imbalance determ. during short-circuits 88−30289
Poynting vector probe for measuring power at extremely low power factor 88−60683
precision EM meas., conf., Delft, Netherlands (Aug. 1984) 86−19727
precision power amplifier for power/energy calibration applications 87−65843
precision power amplifier for power/energy calibration applications 88−16013
precision wattmeter, microprocessor controlled digital meas. system *(Slovenian)* 86−4959
primary broadbanded coaxial thermal noise standard, watt unit realisation 87−14438
primary magnetoresistive converters of unmatched waveguide passing wave power 88−56846
probability/statistical characteristics and applications of power flow process *(Russian)* 88−17112
programmable controllers in power control *(Rumanian)* 85−5543
programmable digital power meter, Model *(Japanese)* 87−8659
programmable digital two-channel function generator fortesting power meters 85−58726
programmable electric energy dosimeter for reduction of thebilling cost in rural areas 86−70735
pulse laser transverse energy distrib. meters, multichannel analogue signal commutators 85−56762
power measurement continued
pulse-modulated radiation energy and time parameters determ., using thermo- and pyroelectric detector 88−67800
pulse-time power-measuring convertor, digitization error 86−39251
pulsed laser beams, relative energy density distrib., photoelec. meter 85−56766
pulsed laser emission, measuring system for space-energy charact. *(Russian)* 86−15753
pulsed lasers, relative energy distrib. and beam divergence meas., metrological support system 85−56761
pulsed lasers emission flux cross section meas., relative energy density distrib. determ., calibration 88−2342
pulsed power meas. using photonic diagnostics 87−21192
pumps efficiency meas. using thermodynamic method 85−14965
pyromagnetic detector, pulsed-periodic radiation behavior *(Russian)* 87−21053
quasi-integer-period-sampling, accuracy improvement 87−14261
quasisynchronous sampling, appl. to nonsinusoidal power meas. *(Chinese)* 85−58799
radar dish power density, predictive model for range-dependence 85−15012
radar receivers, input power, moments estimates 85−25933
radio links, microwave power density, human health hazard aspect *(Polish)* 85−25737
railway tunnel power monitoring system *(Japanese)* 87−58384
railways, traction energy savings by driving mode regulation for German Federal Railways *(German)* 85−27717
rapid processes computerised meas. and recording in power plants *(Russian)* 87−22121
reactive (power meas.), convertor design with with complex input ccts. *(German)* 87−31686
reactive power, formulation and meas. simulation using BASIC program *(Spanish)* 85−31558
reactive power convertor with complex input ccts., operational aspects for meas. appls. *(German)* 86−52640
reactive power meas. and compensation in nonsinusoidal systems *(Spanish)* 85−48622
reactive power measurement, supplementary error calc. due to 3-phase system voltage asymmetry *(Rumanian)* 87−49873
reactive power measurement methods, distorted current and voltage waves, theoretical aspects *(German)* 86−55804
reactive power measurement technique using Walsh transform *(Spanish)* 85−58802
reactive power meter for nonsinusoidal systems, appl. of one-ports realising Hilbert transform *(Polish)* 86−57927
reactive power meter using $\pi/2$ phase shift circuits *(Polish)* 86−5450
real power computation from asynchronous samples of current and voltage *(German)* 86−5447
real power computation from asynchronous samples of current and voltage, appl. 86−5448
rectangular waveguide calorimeter for single intensemicrowave pulses 87−8726
reference wattmeter calibration for industrial-frequency power and energy meas. *(French)* 86−25663
relativistic intense guided electron beam, velocity distrib. and energy diagnostics 86−38671
remote meter reading and load management system using power network for communication 87−50904
Response Company's electricity metering panels for energy monitoring 88−10920
restaurants, energy use study 86−40361
RF, coaxial calorimeters and microcalorimeters appl. as standards 85−20679
RF, IF and AF attenuation and ratio−national standards 86−38503
RF and microwave power meas., standards review 86−38485
RF and microwave power measurements, error reduction considerations 86−31567
RF error statistics for power, voltage and phase measurements 87−20827
RF meas. technology advancements *(German)* 85−14580
RF measurements with non-hysteretic SQUID 88−16403
RF millivoltmeter URV 5 for up to GHz range, voltage and power meas. 85−26386
RF power in 50 ohm wave impedance coaxial line at 50 MHz, meas. methods and results *(German)* 87−63473
RF power meas. using directional couplers 88−12573
RF power measurement, Marconi 6960 microprocessor-controlled instrument, design and charact. *(Italian)* 85−37421
RF power measurement telecommunication appls. *(Dutch)* 86−55805
RF power measurements using non-hysteretic RF SQUID 85−48045
RF power meter, Bird Electronic model 4421, programmable compact design 87−56733
RF power meter, model 490, 10-40 GHz range, dual-microprocessor based design 87−56732
RF power meters, calibration technique using thermal convertors 86−69995
RF power standards using a thermocouple, calibration *(Japanese)* 86−65244
RF/microwave automatic peak power meter with dual input/display, Model 490 *(German)* 87−70690
RF/microwave power meters, product survey 88−60805
Rhode & Schwarz NRV power meter for 400 pW to 500 mW 88−36115
rotating shaft torque meas. accuracy using integrating A/D convertor *(Polish)* 87−77432
sampling period determination for numerical measurement of active power in periodic regime *(Romanian)* 88−60852
Sanwa Electric Instrument Co. optical power meters, review 88−4532
scalar network analysers, diode detectors for increased accuracies 86−24419

thermoelectric power meas. on small samples 87−29225
thermoelectric primary measuring transducers, nonlinearity of calibration curves 87−35041
three phase active power meas. transducer *(Russian)* 86−38483
three-phase busbars, impedance, power loss and current distribution meas. 88−62518
three-phase meters for electrical energy, error anal. *(Russian)* 88−61991
three-phase systems, active and reactive power, fast meas. 87−49875
thyristor power convertors, power parameter measurements *(Czech)* 86−6869
thyristors in transient state, power loss measuring methods anal. *(Polish)* 85−5196
time division power meter, errors determ. and reduction 86−24645
time division wattmeters, systematic error under voltage and/or current distortion 88−16396
time-division multipliers for power meas., simulation of current input signals *(German)* 87−41455
time-division power convertor for active power meas., computer aided error anal. 86−65790
time-of-use metering for new residential tariffs 88−48502
time-resolved measurement of energy and species of anintense pulsed ion beam 86−25084
torque indicator for motor driven positioning element *(German)* 87−41616
train resistance due to energy dissipation into freight car suspension *(French)* 87−79085
transconductance amplifier for current calibrations 86−31564
transducers and systems for power system monitoring, appls. and calibration 87−64213
transfer standards for energy and peak power for 1.064 μm laser pulses and CW laser power 86−42469
transimpedance measurement receivers for modulated optical power in optical fibre systems 87−28551
transmission network, power measurements, effects of harmonics *(Croatian)* 85−38474
transmission network measurement mean errors determ. of state estimator *(German)* 88−68865
TV viewer ratings from powerful consumption meas. *(German)* 87−8703
TWT amplifier with linear power charact. and improved efficiency 85−602
UHF wattmeter, design featuring strip line circuitry 86−5337
ultrasonic Doppler imaging systems, power and intensity measurements 88−8816
uniformly sampled periodic signals, theorems on power, mean and RMS values 85−8925
universal measuring set for power system applications *(Croatian)* 85−43656
US absolute power transfer standard 85−38369
US energy meas. of tissues, high-speed data acquisition and analysis 88−61237
UV preionised excimer laser construction and performance 88−14103
V/UHF antennas, effective radiated power meas., in-phase synthetic method 86−5451
VAh metering, alternative approach 87−49826
valve electric motors, current, voltage and power meas. system *(Russian)* 86−45323
vector voltmeter for LF appls. *(German)* 85−64186
VLSI circuits, power dissipation, accurate simulation 87−6794
VSW radio stations parameters meas., using microcomputer-based system *(Slovak)* 86−23674
W-band power measurement using bolometer, high-performance thin-film barretter mount 85−31581
watthour meter calibration and testing, procedures and equip. in GDR *(German)* 88−17212
watthour meter data transmission, using ZKP 16 control computer *(Slovak)* 85−38587
watthour meter evaluation programme for improved instrumentation quality 88−47634
watthour meter testing using SCR waveform generator with regard to distorted waveform current *(Japanese)* 88−17219
watthour meters, sealing equipment, automatic *(Japanese)* 86−5356
wattmeter, Clarke-Hess model 258, charact. and operation 85−31527
wattmeters for electrical power measurements *(Spanish)* 86−60268
wave analysers for AC/DC power meas. *(German)* 86−65148
wide-aperture devices for meas. laser radiation power, receiving element charact. obs. 88−10146
wide-range power meter for watthour meter loss meas. *(Japanese)* 85−64181
wideband actual-power meter 86−70165
wideband sampling wattmeter, microprocessor controlled, design and operation 85−14863
windmill, horizontal-axis, power quality meas., torsional resonance effect determ. 87−51119
windmill with 24 m diameter, power quality meas. 87−57980
YEW 2533 broadband digital wattmeter *(German)* 88−16234
zero-power-factor reference standard based on thermal convertors 88−16238
$Ba_xSr_{1-x}Nb_2O_6$ pyroelectric detector, sensitivity estimation in range 0.24 to 10.6 microns 86−31439
CO_2 gasdynamic laser with nozzles, specific power output 86−36381
CO_2 industrial laser energy meas. using differential calorimeter 87−68575
CO_2 laser parameter meas. with pyroelectric detector 87−61220
CO_2 laser power meas., using thin film thermopiles 88−34097
CO_2 laser, transmitted power meter, using bolometric receiver 86−15756
CO_2 pulsed laser energy meas. using mech. press. contact calorimeter *(Chinese)* 85−29745
CO_2 pulsed laser-emission at 10.6 μm, operating energy meas. standard 87−75204
He-Ne laser, telescopic, energetic charact. obs. 86−22291
KDP electrooptical power and spectrum analyser for pulsed microwave meas. 85−26470
Na high-pressure lamp, efficacy variation obs., with arc tube bore and current 85−32784
Si microwave power convertor, transmission-type bolometric 87−24422
Si:H, F, microcrystalline, thermopile power sensors 87−21050

power networks *see distribution networks; transmission networks*

distribution network control by circuit breaker staged tripping *(Russian)* 88−48561
distribution network lightning research using 11 kV rural test line 86−6425
distribution network overhead lines, replacement planning method using set theory *(Russian)* 85−38523
distribution network reconstruction efficiency, economic study *(Russian)* 86−25565
distribution networks protection using fused ring main units and HV fuses 87−57697
distribution overhead networks, maintenance and technical standards develop. 87−50787
distribution power lines, lightning induced voltages meas., expt., 86−6424
distribution surge arrester, lightning discharge current measurement 86−6438
distribution surge arresters with metal oxide varistors and pressure relief capability 86−6441
distribution system, voltage uprating from 50 kV to 110 kV, experience *(German)* 85−9495
distribution system line loss reduction throughenhanced capacitor location techniques 86−51038
distribution systems, monitoring and protection systems 85−64983
double circuit line conductors, arrangement changes linked problems 88−23533
double-circuit, remote relay protection against multiphase short-circuits *(Russian)* 85−59753
double-circuit transmission line protection by microcomputer-based distance relay *(Chinese)* 87−50863
drilled anchor foundation techniques for Riyadh 380 kV overhead line 87−57676
dynamic line sensor system for real-time overhead line ratings 86−51155
earth effects in series impedance and shunt admittance calc. *(Croatian)* 88−5367
earth electrodes for power line supports *(Russian)* 86−32844
earthing device for support towers of transmission lines *(Russian)* 88−48592
earthing devices, corrosion protection in overhead lines and distrib. switchgear *(Russian)* 88−10911
earthing electrodes *(Croatian)* 86−51034
earthing in different soil conductivity conditions 86−51035
EHV, electric strength of phase-to-phase insulation 87−15320
EHV, three-phase, shielding grid parameters and corona effects, influence analysis 85−9519
EHV and UHV compact overhead lines with embracing towersfor long-distance power transmission 86−12473
EHV and UHV transmission lines, corona effects investigation 86−51027
EHV DC overhead lines, lightning protection and insulation coord. *(Chinese)* 85−4666
EHV high phase order overhead transmission, mechanical and electrical characts. 85−21227
EHV high phase order transmission, comparison with UHV three-phase design 85−21112
EHV overhead line unavailabilities, effects of weather, parameter computation for reliability studies 85−21219
EHV overhead lines, insulator strings electric strength, effect of environmental factors *(Polish)* 88−5368
EHV overhead power lines, mech. perform. of toughened glass insulators 88−68992
EHV overhead transmission line, impact pressure wave dynamic response calc. 87−64184
EHV overhead transmission lines, influence of load factor on transmission cost 85−38437
EHV power lines, voltage distrib. meas. in insulator strings *(Russian)* 88−48586
EHV transmission line insulator washing robot *(Japanese)* 87−9203
EHV transmission lines, EM field effects on cardiac pacemakers, investigation 85−38223
EHV transmission lines using multi-circuit towers 87−57672
Ekibastuz-Kokchetav 1150 kV overhead industrial power line, overvoltage meas. and test results *(Russian)* 88−30394
electric and magnetic field exposure, power cables 88−61478
electric and magnetic fields *(Finnish)* 88−42873
electric field intensity meas., Poland *(Polish)* 88−75194
electric field measurement by voltage monitor *(German)* 85−20677
electric field strength measurement instrument, design description and examples of use *(Russian)* 87−70733
electric fields generated in residential environments, measurements, comparison with calc. values 85−4648
electric locomotive, 12001 type of German Federal Railway, high speed test runs *(German)* 86−26359
electric locomotives, invertor-fed, harmonic currents propagation in power overhead lines 88−69865
electric Operation of the Norwegian State Railways in1985 *(German)* 86−66433
electric power supply for Channel Tunnel, proposals, overview 86−32733
electric railway overhead line/pantograph dynamic study, cost reduction anal. 87−79119
electric railway overhead line/pantograph interface study, dynamic computer simulation 87−79118
electric railway systems, drives and control, electrification, signalling conf., London, England (Sept. 1987) 87−72716
electric railway traction systems, conversion of 15 to 25 kV overhead lines *(German)* 88−31119
electric railways, current collection from overhead lines, quality parameter assessment 87−79120
electric railways, power supply demand of traction system *(German)* 88−31115
electric railways, traction current from public power supply *(German)* 88−31117
electric railways with overhead lines, induction effects *(Spanish)* 88−31130
electric strength of air clearances of transmission line supports and guy ropes *(Russian)* 86−32795
electric tramway suspension wire, maintenance *(Japanese)* 86−66417
electrical fault indicators for power system appls., selection guidelines 88−61962
electrical installations, lightning protection *(German)* 87−50854
electrical parameters calc. on digital computer *(Croatian)* 85−32197
electricity supply stations, lines, equipment and communications lines, safety and maintenance, ANSI standard 87−21947
electrification of Soviet railways, state of the art and prospects *(German)* 86−33770
electrification of the Niedernhausen-Limburg railway line *(German)* 87−22844
electrified railway facilities, substation controllers, overhead cables *(Japanese)* 88−31103
electro-magnetic operated high voltage air switches for overhead distribution lines *(Japanese)* 87−71711
electromagnetic transients on overhead transmission lines−an overview 85−15623
Electromagnetic Transients Program application guide 87−35542
electrostatic field structure *(Russian)* 88−5366
electrostatic induction in motor vehicles located near EHV lines 87−68706

linemen working on de-energised power lines, safety against lightning 86−34002
live line insulator washing system develop. 87−57674
live line maintenance, pollution and corona tests on unconventional compact 230 kV line 88−69032
live line maintenance of HV, EHV and UHVequipment *(Czech)* 86−45013
live line maintenance using robots, position and orientation estimation, computer vision 88−10883
live lines above 1 kV, protective equipment and safety *(German)* 87−30261
live-line maintenance for 220 kV and above, cost effectiveness *(Russian)* 86−32777
live-line repair using remotely controlled maintenance teleoperator 88−10879
live-line working, factors to be considered 88−69007
load ratings, probabilistic considerations for real time operation 86−12467
LOCATION, OPERATING and DIAGRAMS microcomputer programs for load dispatching *(Polish)* 88−75078
long distance, with plate phases, similarity criteria of EHF phys. model 88−61942
long-distance line assembly, mechanical estimation methods *(Croatian)* 87−78163
long-span overhead nonmetallic optical fibre cable, appl. 86−56449
longwave oscillations of power overhead lines, model and wind tunnel anal. *(German)* 86−12459
loss reduction in power systems using single-pole autoreclosing and reactive compensation 86−39023
losses due to current and voltage asymmetry 88−42865
losses due to unbalanced parameters of HV overhead line phases *(Russian)* 87−42493
low freq. elec. fields, biological effects on humans *(German)* 88−10874
LV AC power lines, NEMP and lightning protective devices design *(French)* 87−9182
LV network safety instructions (Netherlands, 1983) *(Dutch)* 85−64943
LV overhead distribution lines, with insulated twisted conductors, charact. and calc. *(Italian)* 85−38521
magnetic effect anal. of networks with finite earth conductivity *(Russian)* 86−44936
maintenance and repair of bundle conductors and insulators under voltage 86−51052
maintenance equipment, insulating element prod. for live condition testing *(Polish)* 88−5377
power overhead lines continued
maintenance methods for cost-effective insulation testing *(German)* 88−69017
maintenance on live-lines, safety distances calc. 86−51041
maintenance procedures and costs *(German)* 88−68976
maintenance under voltage, methods and advantages *(Russian)* 87−71702
maintenance zones and field maintenance teams *(Russian)* 86−39000
MANWEB rural 11 kV distribution network, lightning protection using vacuum circuit breakers 85−64949
mechanical charact. computing, numerical solution by Newton method *(Slovak)* 88−30396
mechanical loading of overhead transmission line conductors, parameters calc. *(Spanish)* 87−21954
mechanical oscillations of overhead line conductors *(German)* 86−18837
medium voltage distribution networks, fault location systems *(Polish)* 86−25574
medium voltage transmission lines, short cct. fault detection and location *(Spanish)* 85−32250
medium-voltage distribution network with sectionalisers, corrosion protection *(Polish)* 86−25612
medium-voltage overhead design for withstanding abnormal weather *(French)* 86−56442
Melina-Vrbovsko overhead power line, Yugoslavia, wind velocity calcs. for periodic meas. *(Croatian)* 88−42871
metal oxide surge arresters, design and performance 85−64995
metal-free, self-supporting optical cable for long span HV overhead power lines 88−22143
metallic pipeline interference from HV power structures, international survey *(French, English)* 87−50821
microprocessor-based fault locator for overhead transmission lines 85−4701
mines electric shock-prevention research program, overview 87−10104
modal parameter calculation for multiconductor overhead transmission lines 85−38518
monitoring of critical foreign deposits on power overhead lines and associated equipment *(German)* 85−32195
mountain overhead lines, insulation dielectric strength at working voltage 88−36864
multi-circuit power transmissions, reliability appraisal of line insulation *(Russian)* 85−59751
multi-pole line model with pulse corona and frequency-dependent damping, lightning overvoltage *(German)* 87−78156
multiconductor, Aeolian vibration control 85−43625
multiconductor HV transmission systems, computer modelling 88−68993
multiconductor nonuniform power line NEMP-induced surge model 88−8530
multiconductor overhead line galloping, fatigue and stress propagation *(Japanese)* 86−51043
multiconductor quasi-steady state interconnected systems, capacitance and induced voltage *(Russian)* 86−6384
multiple circuit configurations of overhead lines, earthing switches, switching 88−55046
multiple HV overhead power lines in compact construction *(German)* 87−15315
multiple overhead transmission lines, reliability modelling 86−6383
multisystem overhead line construction, reliability and economics *(Hungarian)* 87−64186
multiwire overhead lines, wave refraction calc. allowing for ground losses 88−75201
multiwire overhead transmission lines with distributed parameters, steady state regimes 88−75200
multiwire transmission lines and insulating equipment, snow deposition effects *(Japanese)* 87−4415
MV distribution, insulated overhead lines *(Spanish)* 88−5371
MV overhead branched line, fault location, impulse mode testing *(Polish)* 88−10877
MV overhead distrib. system protection and sectionalization 88−23525
MV overhead transmission lines, protective quality evaluation from accident statistics *(German)* 85−16708
Nagano district (JNR) snowfall damage and countermeasures *(Japanese)* 86−51963
negative-sequence power-direction relay for HV overhead transmission lines 87−9206
NEMP illuminated overhead telecom. or electric lines behaviour anal., transmission line theory limitations *(French)* 88−21884
Netherlands 380 kV interconnecting network, necessity of ring closure *(Dutch)* 86−12263
Netherlands 380 kV interconnecting network completion, overhead line and substation designs *(Dutch)* 86−12463
Netherlands 380 kV overhead line design optimisation and conductor choice *(Dutch)* 86−12464
Neubaustrecke Hannover-Wurzburg elec. railway, commissioning of Fulda-Wurzburg section, substations *(German)* 88−55678
neutral conductor displacement voltage reduction 85−15637
non-metallic aerial cable with optical fibres for 1.3 micron 85−58137
nonmetallic optical fibre cables for long spans 85−37085
Noord-Holland LV overhead transmission system rewiring *(Dutch)* 87−30218
Norwegian transmission line construction, climatic and topographical difficulties 88−69037
Nurnberg-Lauf railway line electrification, construction and adaptation requirements *(German)* 88−24219
O-Bahn local transport system with electric traction *(German)* 88−5933
Ontario Hydro, managed system for distrib. forestry 88−10885
open-loop technique reduces ground-wire loss 87−35665
operating limits, simulation of environmental conditions 85−64925
optical cables use for electricity supply *(German)* 86−23924
optical communication links on HV overhead line *(French)* 86−64975
optical communications on power overhead lines, HV terminations *(French)* 86−65001
optical communications using overhead power transmission lines 86−49631
optical fiber ground wire 88−22145
optical fibre cable, metal-free, in HV overhead networks, elec. stress mechanisms 88−69009
optical fibre cable support techniques 87−20507
optical fibre cables for overhead transmission lines 87−8287
optical fibre communication link, on power overhead line, construction, technical equipment *(German)* 85−31040
optical fibre compound overhead ground wire in transmission line, maintenance system 88−68978
optical fibre earth wires for overhead power lines *(German)* 86−23907

power overhead lines continued
optical fibre ground wire for fault location system 86−56447
optical fibre telecommunication cables in overhead lines *(German)* 87−49042
optical waveguides for power and communications transmission *(German)* 85−53337
optical-fibre cables on power lines, for improved data transmission *(German)* 85−31038
optimisation problem soln. for overhead transmission line conductors *(Russian)* 87−42494
OPTOFLEX optical overhead cable for use on high-power lines 88−41669
overcurrent protection for distrib. network overhead lines by hybrid semicond./armature relay *(Russian)* 87−15384
overhead cables with optical fibres for power and data transmission *(German)* 85−31037
overhead ground wire, induced lightning voltage suppressing effect 86−25629
overhead ground wire, lightning attack protection, direct current arc test *(Japanese)* 86−6411
overhead transmission line earth fault prediction using optical fibre link 87−78165
overvoltage protection of Chinese medium voltage distribution networks 85−64950
overvoltage surges with corona, propagation anal. 85−43622
pacemaker performance, possible influence of EM field conditions in power transmission line vicinity 85−38243
pantograph collector damage by pull-off fitting ear section interlock faults *(Japanese)* 87−36208
parallel overhead lines, relay protection with accelerated tripping *(Russian)* 87−15314
parameter selection and power capacity improvement *(Czech)* 87−15311
parameters, comparison between those from handbook formulas and computer programs 85−38524
permanent insulator coatings for power overhead lines, washing reduction 88−75202
phase conductor surge currents from lightning stroke, numerical anal. using Laplace transforms 88−30392
phase differences of overhead lines, effects on power systems *(Russian)* 88−61824
phase to ground and phase to phase coupling on 500 kV transmission line 86−61155
pin insulators, conductor suspension checking for forced-out loads *(Russian)* 88−10889
pipelines and overhead power lines in close proximity, induced effects 86−70696
planning and construction using HP 71B hand-held computer *(German)* 87−78152
pole and tower foundations for French overhead lines, construction and design *(French)* 88−23537
pole earthing resistance rel. to concrete foundation conditions *(Croatian)* 87−15331
poles for overhead power lines, embedment 86−39200
Polish power networks, present state and development trends *(Polish)* 85−32200
polluted insulation, internal overvoltages and electrical strength *(Russian)* 86−25607
polluted insulators of overhead lines and substations, cleaning in live conditions *(Polish)* 87−64191
polymer insulating materials for power overhead lines, life testing *(Russian)* 86−35946
porcelain insulators for overhead lines, puncture tests 88−42886
power flows equivalent characts., effect of balancing stage *(Russian)* 85−59551
profiles design, by interactive computer-based graphics system *(Finnish)* 85−21217
protected arching horns for 110 kV transmission lines *(Croatian)* 87−64183
protection against spark-over caused by large birds 85−15636
protection by pole-mounted autoreclosers and sectionalisers 86−56451
protection devices, survey 85−38582
protection requirements 85−38552
protective devices for radial overhead transmission line networks 87−30221
pulse generator for EMP-induced surges simulation in power overhead lines 87−22631
pulse signal devices for warning of ice formation on overhead power lines 85−4653
pylon foundation measurements, probability bases *(German)* 87−21960
pylons, concrete portal design used in conversion of power transmission to 380 kV *(German)* 85−9521
pylons, optimum spacing basic calc. procedures *(Russian)* 87−42489
radiation meas. by OHZORA satellite over E. Asia and N. Europe 88−5165
radio broadcasting, power line reradiation at standard broadcast freqs., ground loss effects 88−41796
radio direction finding for lightning strike location 86−4776
radio interference suppression for medium voltage, overhead line insulators 85−59793
radio noise meas. procedures, ANSI/IEEE standard 87−30225
railway catenary support installation and line testing *(German)* 87−22846
railway catenary system Re 250 utilising Al and stainless steel nuts and bolts *(German)* 87−22845
railway direct suspension overhead wiring maintenance *(Japanese)* 86−56983
railway electric traction of Deutsche Reichsbahn, power supply, distribution and contact system *(German)* 86−26362
railway electric-car overhead line *(Japanese)* 87−58386
railway electrification, design and drawing by computers 87−43590
railway engineering design, computer software systems appl. 88−37703
railway overhead lines, safe working for personnel *(German)* 88−5942
railway overhead wire displacement and stress anal. by FEA 87−36222
railway overhead-catenary and pantograph system, contact losses reduction method 87−58422
railway power supplies, overhead transmission lines between Mannheim-Weiterstadt and Florsheim *(German)* 85−10172
railway power supply develop., overhead electric lines *(German)* 87−64864
railway signalling equipment failure due to HV cutout, vibration testing *(Japanese)* 87−64856
railway traction overhead power lines, computer aided lightning performance calc. 85−64953
railways, electric installations for introduction of western Ried line into Mannheim main station *(German)* 86−26361

power overhead lines continued
railways, HV distribution line for automatic signalling, disconnection problems *(Japanese)* 86−66419
railways, power supply lines for high speed Italian, French and German railways *(German)* 85−5433
RAZOA distance relay, description, use, operation *(Chinese)* 88−61974
reactance coils 4-beam type, for 750 kV overhead power lines, single-phase automatic reclosure *(Russian)* 86−32846
rehabilitation projects in Third World countries 87−51328
reinforced concrete supports for 750 kV overhead power line network in USSR *(Russian)* 86−32793
reliability analysis under icing and wind conditions *(Russian)* 88−10839
reliability and carrying capacity increase *(Russian)* 88−30398
reliability based design of power transmission line capacity 87−21955
reliability design of overhead power transmission lines 86−18841
reliability in icy regions *(Russian)* 86−51032
remote surge analyser for ZnO arrester performance monitoring 86−65780
remotely-controlled manipulator for live overhead line maintenance in bad weather 86−12471
research contribution to the reduction of fault rate 85−38528
resonance frequency surge voltages in railway service *(Hungarian)* 87−72499
resonant overvoltage phenomena caused by overhead transmission line faults, computer simulation 86−6380
RF noise fields generated by corona streamers on power lines above a dissipative earth 85−57063
RFI levels calculation methods *(Croatian)* 85−38519
robotics for distribution systems 88−10886
route planning and tower design using computers 88−68999
Rumanian national power transmission network development for telephony and data transmission *(French)* 87−48838
rural networks, short interruptions reduction, service quality improvement 88−17147
safe maintenance of energised overhead power lines 87−21956
safety, probability anal. of personal danger from 750 kV overhead power line *(German)* 86−12455
sag and mechanical stress calc. *(Russian)* 86−32781
sag compensation using Ni-Ti shape memory alloy *(Russian)* 87−78155
sagging, lin. wire equivalence for electrical parameter calcs. *(Russian)* 88−36863
salt-resistant gas-insulated switchgear development for 20 kV overhead distribution *(Japanese)* 87−30878
same-tower double cct. power transmission lines, microcomputer based distance protection *(Chinese)* 88−61944
SAX system, medium-voltage distribution mode 88−23532
SCC detection without stripping of insulation *(Japanese)* 86−56439
security and economy of overhead lines and cables *(Hungarian)* 88−17177
self-supported delta type towers, theft proof fasteners, ground wire segmentation, path clearing 87−15340
self-supporting optical cables, non-metallic, HV characts. 88−22142
Sendai city subway, railway maintenance management *(Japanese)* 88−31102
separators for high-voltage overhead transmission lines 88−69006
sequence capacitance computation using capacitive reactance method 88−23535
servicing of distribution networks, local environment maintenance *(Japanese)* 87−78083
SF_6 insulated overhead power cables, thermal transient simulation method 88−55041
sheathing materials for dielectric self-supporting communication cable for use on long-span overhead power lines 88−69011
Shiobara HVDC overhead test line, audible noise eval. 88−23524
short-circuit tests on overhead distribution lines 88−23534
short-circuited line with distributed parameters, input impedance study *(Russian)* 86−61153
short-circuits in inhomogeneous frozen ground, electric field anal. *(Russian)* 86−39178
short-term thermal capacity of overhead lines 88−55036
signal line disconnection accident on Nemuro line, Japan, repair *(Japanese)* 87−15271
silicone resin sheathed polymer line insulators, field trial results *(Russian)* 87−4424
single mode fibre-optic ground wire link using dispersion-shifted fibres 88−73967
single phase earth fault currents, higher harmonics study *(Russian)* 86−39183
sleet and wind loads on overhead power line, investigation *(Hungarian)* 87−42497
sleet and wind loads on power overhead lines, investigation *(Hungarian)* 87−42498
snow effects on medium voltage, overhead power lines and towers 85−59774
space charge drift from a +/−400 kV DC transmission line 87−14944
spacer-dampers for transmission line two-conductor bundles, stiffness study 86−51061
spacers, special insulators for overhead power lines *(French)* 85−59782
spacers for overhead lines, design for fault suppression *(Slovenian)* 88−5374
span configuration and mechanical loads, computer-aided design and calc. *(German)* 85−32192
span length calc. *(Russian)* 86−65726
spark gaps for lightning protection, electrical characts. *(Russian)* 87−35689
specifications development for HV transmission lines *(German)* 88−68969
split phase conductors, wave characts. under impulse corona conditions *(Russian)* 86−25611
split phase overhead power lines, calc. of vibrational forces on radial spreaders *(Russian)* 87−42491
split-phase, conductors vibration *(Russian)* 85−21226
standardisation of overhead transmission lines *(Russian)* 85−32193
standardization of overhead power transmission lines 85−38520
static VAr compensator for transmission line loss minimisation 88−69005
steel, natural gas pipelines, protection from corrosion dangerous voltages from overhead lines *(Danish)* 87−71706
steel pole transmission line, longitudinal dynamic loading, structure flexibility 87−50843
steel support structures for power lines and outdoor substations, CAD *(Polish)* 86−18853
stochastic modelling and stabilisation of galloping 86−51031
stratified structure of soil influence on model parameters 88−68986
structural steel core replacement by composite materials 87−64187
structure analysis and design, program users' manuals 86−61172

power overhead lines continued
strung conductor mechanical characts., suspension point elevation and swinging insulator strings *(Czech)* 85−27078
support footing resistance and soil resistivity meas. 88−55045
support tower insulation of 10 kV overhead lines, number of trips calc. *(Russian)* 87−42516
supports for 10-35 kV transmission lines, operating life and replacement strategy, computer aided anal. *(Russian)* 87−4423
supports using SV-3 stanchions, testing *(Russian)* 86−32799
supports with insulated guy wires for 330 kV overhead lines *(Russian)* 86−61161
surge impedances of overhead lines with nominal voltages of 110 to 400 kV *(Slovenian)* 87−57659
surveillance and remote control of overhead distribution networks, new approach 87−50791
survey and design, computerisation 87−21957
suspended insulator replacement without conductor lowering *(Russian)* 87−78175
systems effectiveness eval. for lines with increased capacity 87−35664
T-2 motion resistance conductors and lattice arms on tangent poles of overhead line 87−15321
temporary line erection and dismantling for maintenance appls. 88−10878
TFB 420/80 420 kV single-column pantograph isolators for short-circuit current peaks up to 200 kA 87−78169
three-phase overhead line step response, numerical calc. *(Croatian)* 88−61953
TLWorkstation software package, EXECUTIVE, MULTI-FLASH and TLOP programs 87−15242
TLWorkstation software package, moment foundation and pier analysis and design programs 87−15243
tornadoes, frequency of losing two rights-of-way 85−43620
tower insulation requirements for 345 kV transmission lines at altitudes of 1250 to 3680 metres 85−27091
towers, load transfer of main leg tensile forces tofoundations [overhead line towers] 86−51077
towers for 110 kV transmission lines, foundations *(Russian)* 86−44996
towers for 735 kV transmission lines of Hydro-Quebec, design and construction 86−12476
towers for transmission lines, chainette structure development at American Electric power 86−12477
track resistant sheathing material for aerial optical fibre cable, develop. and testing 88−69010
trackside substations for railway electrification, National Railways of Zimbabwe 88−37692
tram and trolleybus overhead line feed from unified thyristor convertor stations 86−51962
transducers for overhead lines, zero sequence voltage and current device design 85−31469
transient processes in HV overhead transmission lines *(German)* 86−18835
transit sagging of conductors using a calculated angle of sight 85−9515
transmission, environmental condition simulation, performance anal. 85−27080
transmission, microcomputer-based spreadsheet calculations 85−9430
transmission, past and future trends *(Russian)* 85−21218
transmission and distrib. network equipment failure rate monitoring using fault statistics 87−50785
transmission and distrib. systems conf. London, England (Feb. 1987) 87−43784
transmission line, split-phase conductors galloping expt. study *(Russian)* 87−42500
transmission line ampacity calc. using stochastic models 88−68982
transmission line conductor on permafrost ground, fixing device and short-circuit operation *(Russian)* 86−51120
transmission line conductors, stringing method 86−12472
transmission line conductors, thermal anal. using wind tunnels 88−68983
transmission line conductors design, technical and economic basis, limiting terms *(Russian)* 86−61149
transmission line construction, maintenance and reliability *(German)* 88−68968
transmission line design, wind speeds estimation 86−51040
transmission line dynamic wind load determ., statistical method *(Hungarian)* 88−61949
transmission line effects on AM radio broadcast antenna radiation patterns 86−48690
transmission line electric fields, human exposure estimation program 86−56206
transmission line inductive coupling and loop mutual impedance calc. 86−36767
transmission line live-line maintenance, new hot stick procedure 86−61156
transmission line modeling with explicit grounding representation 88−48585
transmission line pole foundation stone calcs. *(Croatian)* 88−61958
transmission line protection scheme, earth fault relay system 88−61946
transmission line robotic maintenance, TOMCAT component evaluation unit 86−65729
transmission line structural develop. studies 87−15322
transmission line supports, design, construction and testing 86−12454
transmission line tower safety, corrosion protected steel appl. *(German)* 88−69016
transmission line towers, reverse erection technique 88−69034
transmission line uprating planning, analytic tools 86−39141
transmission line vertical clearance upgrading for 100 degrees centigrade operation 86−25615
transmission line wind loads, equivalent design wind pressure 86−61158
transmission lines, current protection devices 87−9188
transmission lines, elect. and mag. fields calc. *(Spanish)* 88−10882
transmission lines, makeup-arc extinction monitoring device 87−9190
transmission lines, radar, electro-optical visual methods of studying bird flight 86−6387
transmission lines, remote protection equipment 87−9187
transmission lines, single-phase reclosing *(Hungarian)* 87−30219
transmission lines 600-750 kV, single-phase and three-phase automatic reclosure device 87−9189
transmission lines asymmetries estimation *(Russian)* 87−42501
transmission lines reliability during standardised load calc., icing *(Russian)* 86−61148
transmission lines up to 30 kV, construction aspects *(German)* 85−32198
transmission network planning, methods for design, construction and operation of overhead lines 88−68857
transmission network with 345 kV overhead line and underground/submarine cables 86−65663

power overhead lines continued
transmission poles, direct embedded setting depths reduction research program 86−61171
transmission structures of weathering-steel, rehabilitation and corrosion protection 86−61169
transmission system maintenance and repair using helicopters 88−69036
transmission system overhead lines, effect on insulation and insulators of steeply-rising lightning discharges *(Russian)* 85−59752
transport systems for high speeds, CAD of overhead suspension system *(Russian)* 85−10180
transposed and untransposed, correl. of switching overvoltages 88−61943
travelling wave phenomena in HV overhead lines and switchgear, expt. investigation *(German)* 87−21951
trolleybuses, hybrid, in Nancy, centralised computer control gives high speeds *(French)* 87−5034
TV ghost images generated by overhead power transmission lines prediction, field verification of calc. 86−4830
twelve-phase overhead transmission networks, line parameter eval. 88−68860
two-circuit overhead line cost estimation *(Russian)* 86−70697
UHV 765 kV power line conductors, lateral environmental interference *(Korean)* 87−57666
UHV electric power transmission R&D, technical, economic and environmental aspects 86−6305
UHV overhead line design criteria based on 1000 kV Project 86−51055
UHV overhead line insulator string power arc behaviour 88−55044
UHV transmission lines without ground return wires, lightning performance 87−64181
ultra-high-speed directional comparison relay, for EHV/UHV transmission line protection, transients signals and their processing 85−59804
unsymmetrical operating conditions in power systems using phase coordinates *(Russian)* 86−25477
vegetation management of transmission line right of way 86−65732
vertebrate development, effect of ambient levels of power-line-freq. elec. fields 88−48251
vertical clearances of overhead line conductors, National Electrical Safety Code requirements 86−18844
vertical dual bundle, tensorial forces in partial conductors and field spacers *(German)* 88−10870
vertically-ordered three-phase HV overhead cable attenuation estimation *(Croatian)* 87−62814
VHV DC transmission lines, voltages and short-circuit currents anal. *(Russian)* 85−59754
Vibration Laboratory at CPRI Bangalore for testing vibrations of power overhead lines 85−33137
Vienna 380 kV cable and overhead link magnetic induction calc. *(German)* 86−6320
Virginia Power overhead line towers multi-helix screw anchors 88−75211
voltages induced on an overhead line by the lightningstepped leader 86−64015
wake induced oscillations of overhead power lines, study at CPRI 88−68967
wake-induced vibration analysis 86−51042
Walker County-STP HVDC tie, monopolar metallic return, design 86−12409
wave propagation on overhead transmission lines undernon zero initial conditions 86−6389
weather conditions effect calc. in computer control of power systems *(Russian)* 87−4413
weather induced overhead line loads, probability anal. 86−6379
weather-dependent thermal line rating method 88−68979
weathering steel H-frames for 230 kV overhead line 87−15337
weathering-steel H-frames direct embedded for 345 kV overhead line 86−61170
wind, stress and falling ice effects 86−51051
wind and ice loads, design measures 85−38530
wind direction and intensity simulation *(Croatian)* 87−50822
wind induced vibration damage detection using radiography 87−50831
wind load probabilities for overhead power lines, IEC/TC 11 recommendations *(German)* 86−12456
wind pressure considerations in route design *(Korean)* 88−48593
wind speed mapping for overhead transmission line planning *(Russian)* 86−61151
wind-excited vibrations, mathematical model comparison for overhead transmission lines 87−42503
wind-induced cable galloping, origination mechanism anal. using transient wave procedure *(German)* 88−10872
wind-induced galloping, effects on stress and lifespan *(German)* 88−10871

cogeneration plant, economic load dispatch guidance system 86−33114
cogeneration plant, petroleum coke as fuel for steam generator 86−33110
cogeneration plant based on biogas, Denmark 85−9691
cogeneration plant capacity factor calc. based on life-cycle performance and operating modes 86−19078
cogeneration plant for Diamond Shamrock Chemicals Corporation 86−71162
cogeneration plant optimal management model and procedure 86−39551
cogeneration plant using gasified coal to feed fuel cells, economic aspects 87−43408
cogeneration plant using gasified coal to feed fuel cells 87−43407
cogeneration plant with atmospheric fluidised bed boiler, design features 86−33113
cogeneration plants, air interchange characts. *(Russian)* 87−4545
cogeneration power plant, 250 MW power unit operation during power supply interruption *(Russian)* 86−33052
cogeneration power plant, economic tandem heat/power heat pump *(German)* 85−4891
cogeneration power plant control, operator training simulator *(Russian)* 87−4586
cogeneration power plant design, utilisation points, protection and control 85−43868
cogeneration power plant electrical systems, design and construction 86−25906
cogeneration power plant of Offenbach energy utility, energy, political and environmental aspects *(German)* 86−65920
cogeneration power plants, decentralized small systems for US Navy shore bases 85−48864
cogeneration power plants, double-flow heat exchanger for temperature condition improvement *(Russian)* 86−65906
cogeneration power plants, heat and fuel loss effects on fuel costs *(Russian)* 86−65905
cogeneration power plants, modular system eval. 85−53535
cogeneration power plants, turbine heat extraction design requirements 87−4596
cogeneration power plants using KHD-Kawasaki gas turbines in W Germany 85−38871
cogeneration power plants with condensing turbines, optimum district heating design 86−70801
cogeneration system, natural-gas-fired engine driving 65 kW synchronous generator 86−19052
cogeneration system, optimum design, min. operating costs 87−9101
cogeneration system for industry, electrical system arrangement 86−39559
cogeneration system for petrochemical plant, design, construction and operation 85−15599
power plants continued
cogeneration total energy plant for heat, cooling and power for hospitals 87−15513
combined cycle, with circulating fluidised bed combustion for utility energy production 85−38803
combined cycle cogeneration with 85.6% fuel utilisation 85−4947
combined cycle gas and steam turbine plant at Horseshoe Lake power station, operation 86−25893
combined cycle gas turbine power plant, using General Electric frame 6 turbines 85−15903
combined cycle plant, development of the transpiration air cooled turbine for high temperature dirty gas streams 85−4967
combined cycle plant, heavy duty industrial gas turbine conversion and appl. 85−4973
combined cycle plants in China 87−4564
combined cycle power generation with 26 MW gas turbine powering steam turbine, feasibility 85−48865
combined cycle power plant at Lauswood, reduction of NO_x from gas turbines 85−43859
combined cycle power plant at Paka, Malaysia 86−33029
combined cycle power plant systems 85−27286
combined cycle power plants, BBC's KA 8 and KA 13E series 85−32335
combined cycle power plants, computer calc. of frequency and duration models 85−59839
combined cycle power plants, conversion from oil and natural gas firing to coal firing *(German)* 87−9357
combined cycle power plants, Kalina cycle utilisation 86−61319
combined cycle power plants, selective catalytic reduction for NO_x emissions 86−61338
combined cycle power plants, waste water treatment *(German)* 87−15522
combined cycle power plants and combustion turbine, availability and performance improvement 86−25894
combined cycle power plants by converting existing gas turbine plants 86−19050
combined cycle power plants for cogeneration of electricity and process heating *(Spanish)* 85−9692
combined cycle power plants in Hungary, effectiveness and construction *(Hungarian)* 87−15502
combined cycle power station, Hungarian power plant construction programme, *(Hungarian)* 87−15501
combined cycle steam and gas turbine power plants, integration of organic Rankine cycle 86−25871
combined cycle technology and future applications, coal gasification combined cycle 87−42656
combined gas-steam cycles, parametric anal. 87−51010
combined heat and power plant based on refuse gas, operating experience *(German)* 86−19051
combined heat and power plant economic optimisation, computer aided analysis *(German)* 85−4875
combined heat and power plants, asynchronous and synchronous machines, control and operation *(German)* 85−9682
combined heat/power generation by extension of district heating plant with gas turbine *(German)* 85−60039
combined heat/power generation plant installation *(German)* 85−60040
combined heat/power plants, waste heat utilisation for space heating, control and safety aspects *(German)* 85−59979
combined heat/power using gas turbines, for meeting papermill energy demand 85−16510
combined power plant cycles with fluidized bed combustors 87−4570
combined-cycle efficiency improvement by heat recovery duct system loss reduction 86−45159
combined-cycle power generation using PRENFLO coal gasification technology 86−61340
combined-cycle power plants, coal and gasification, capacity factors and electricity cost anal., report 85−4713
combustion, dissociation of gases, approximate method 86−51438
combustion chamber, combustion stability 87−22113
combustion turbine cogeneration units, economics 86−33116
competitive production strategies for ageing power plants 87−50726
component wear meas. by surface layer activation 87−59039
components, life expectancy estimation, WEIPLOT computer program 85−15845
components, miniature specimens fabrication for creep testing 88−75437
components, rotor steels, embrittlement detection, using NDT techniques 85−38830
components life prediction, cracks caused by creep 87−9361
components manufacturing quality control, NDT techniques *(French)* 88−17350
composite overhead telecommunication systems with optical fibres, solar cell power supply system 86−61438
compressed air energy storage power plants for HL and P utility, comparative study 85−49123
compressed air storage plants to supplement power plant generation, theory and design 85−49121
compressed-air energy storage in porous media sites, geotechnology workshop 88−11406
computer aided anal. of power plant and power system reliability *(German)* 86−12256
computer aided design of electric power plant wiring *(Croatian)* 87−22004
computer aided network planning for power plant anal. *(Croatian)* 87−22006
computer assisted training for power plant automation system operators 85−54065
computer integrated system for improved productivity in plant engineering 87−71865
computer program for global availability modelling 88−11099
computer replacement project in Swedish Nuclear Power Training Center 86−70798
computer simulation of physical processes using a schematicdiagram of the system 85−59835
computer systems and intersystem communication development trends 86−12542
computerised monitoring using Spectra-Hsss data acquisition systems 86−56586
computerized procedures system for enhanced plant operation 87−71947
condensation turbogenerators, initial steam pressure change effects on efficiency *(Russian)* 86−33046
condenser cooling system, seawater pipe flow speeds and biofouling *(Japanese)* 85−59843
condenser design for power plants 86−25930

power plants continued
condenser failures in power plants, copper corrosion 86−12702
condenser performance test and replacement tubing material evaluation 88−75277
condenser tubes of Cu alloy, corrosion prevention 87−4473
condensers, 2D flow and heat transfer computation 87−30397
condition monitoring for fault and failure anticipation, safety implications 88−17353
condition monitoring of power generation process for maintenance downtime reduction 86−61321
conditioning subsystems for photovoltaic central station power plants 86−39639
conf., Chicago, IL, USA (April 1984) 86−26491
conf., Essen, West Germany (Oct. 1985) *(German)* 86−19720

Connecticut Yankee power plant availability study, using fault tree methods and UNIRAM package 88−10935
conservation/water reuse in fossil fuel power plants including water treatment plants 85−4894
construction, engineering development prospects *(German)* 86−51173
construction, improved piping systems *(German)* 85−21273
construction cost of coal-burning generating units, effects of technological change, experience and environmental regulation 85−59992
construction management of Commonwealth Edison, experience and organisation 87−78417
consumer protection responsibilities of power plant operation in Finland *(Finnish)* 86−6268
consumption and generation of electricity in BRD *(German)* 87−42635
continuous emission monitoring guidelines, United States 85−27142
continuous vibration monitoring and diagnostics 87−56847
control bridge convertor stability with parametric feedback *(Russian)* 86−32888
control circuit CAD for distribution power plants *(German)* 86−32883
control components, VGB fault statistics *(German)* 88−62181
control panel enhancement using mockups 86−45172
control room crew effects on plant transient anal., behaviour model 85−59848
control room displays, influence on operator's performance 85−32262
control room visual environment design and modelling 86−13172
control system reliability anal., RELVEC computer code 88−48783
control upgrading in power plants, project organization 88−10931
controlled sectioning in multi-unit power plant, power system reliability improvement *(Russian)* 87−50649
controllers, optimum parameters calc. *(Chinese)* 88−48772
convecting solar pond power plant, optimum pond temp. for max. efficiency 88−5905
conventional and nuclear, cooling water systems, optimisation *(German)* 88−69113
convoy programme for planning and construction of nuclear power plants *(German)* 87−35740
Cool Water coal gasification combined cycle program, features and operation 86−25888
Cool Water coal gasification programme progress report 86−45213
Cool Water integrated coal gasification combined-cycle plant performance 86−33126
Cool Water integrated coal gasification-combined cycle operating experience 86−61339
Cool Water integrated gasification-combined cycle demonstration plant progress report (1984-5) 87−30380
cooling tower with laminar air flow and low resistance *(Croatian)* 86−65909
cooling towers, airborne emissions anal. 87−15530
cooling water, biofouling control through targeted chlorination 85−15834
cooling water system, corrosion monitoring by coulostatic method 86−5009
cooling water system, stagnant water and microbiologically induced corrosion 87−71957
cooling water systems, biological contamination, causes and countermeasures, filters *(German)* 88−69153
cooling water systems with continuous corrosion rate monitoring 85−32343
COPOS power plant computer control systems, LAN technology 87−4296
corrosion control for power plant life extension 87−30374
corrosion in power generating equipment, symposium, Baden, Switzerland, (1983) 85−16581
corrosion protection layers in the technology of power plants *(German)* 88−17388
corrosion protective coatings, painting schedules 86−18914
cost effectiveness calcs. in power engineering *(Russian)* 87−77994
criteria computer for control sequence fault location 86−51443
critical plant component performance improvement, analytical approach 87−9126
cross flow single-row systems of jets, characts. calc. 85−48644
crude oil burning experience in MS5001P gas turbines 85−21495
Czech Power Company management problems *(Czech)* 86−65604
Czech thermal power plants, post war develop., Power Research Institute *(Czech)* 88−37017
Czechoslovak power industry and power consumption trends, economic aspects *(Czech)* 85−59572
Czechoslovak power system development, thermal and nuclear generation facilities *(Czech)* 86−25863
daily operational planning for power plants using thermal and hydraulic equipment 87−4471
Danish district heating power plant innovations *(German)* 87−15525
data acquisition replacement utilizing distributed microprocessor technology 87−71949
DC cable fire at Bayernwerk Schwandorf power plant, cause, course, consequences *(German)* 88−23740
DC power systems, common and embedded, for subscriber loop carriers 88−30255
decision support under abnormal condition, eliciting operators mental model of plant 86−33992
decision-oriented cost anal. method *(German)* 87−4470
dedicated CAD facilities for power plant modelling, simulation and control 87−71964
DeFence: an integrated perimeter security system 85−124
defense reactor low-power, unattended, for electric power supply at remote locations 85−59911
design combining scale modelling, draughting and CAD 86−65797
Detroit Edison's Belle River low-sulphur coal-burning power plant technology 87−64409
development methodology under incomplete information 88−75230
power plants continued
device function numbers for switchgear components in substations and plants, IEEE standard 88−24092
diagnostics by IR imaging 88−5420
diagnostics for power plant operation, maintenance and upgrading 85−39511
diesel electric power stations using heavy fuel, impact of new technology 85−38876
diesel engine-electric generator coupled power supply for telecommunication plants 86−61644
diesel generating plant, market in African region, south of Sahara 85−65153
diesel generating plant, market in Central and South America and Caribbean 85−65156
diesel generating plant, market in Middle East and North Africa 85−65157
diesel generating plant market, world review 85−65159
diesel generating plant market in Europe 85−65158
diesel generating plant market in Far East region and Oceania 85−65154
diesel generating plant market in North America 85−65155
diesel generator standby plant, SIMATIC S5 programmable controller system 87−15570
Queen Elizabeth II diesel-electric propulsion and power plant with waste heat recovery 87−9912
digital image radiometer for heliostat eval. at Solar One, development and performance 86−55557
digital simulation of power plant control systems, performance eval. 85−60015
digital simulator for minicomputer based controller for power plant frequency and power control *(Russian)* 87−4469
digital simulator for student training 85−54069
direct contact heat exchanger with a submerged combustion chamber for water heating 85−48867
dispatcher-training simulator 86−12282
distributed computerised control, large scale system modelling, hierarchical approach 88−48622
distributed control, reliability and speed considerations 85−43669
distributed control in power plants, panel discussion 85−43668
distributed GO processing, reliability and availability evaluation 88−10805
distributed parameter systems, simulation of nonstationary processes 85−59852
distributed plant monitoring systems, capabilities and advantages 86−12675
distributed power arrangement with battery between rectifier and converter for digital switching systems 87−30825
district heat from coal fired power plants, survey results *(German)* 86−65922
district heat network supplied from Beznau nuclear power plant *(German)* 87−15446
district heating, boilers for the generation of steam and hot water *(German)* 85−4893
district heating facility of Milan's cogeneration system 86−65921
district heating power plant, pressurised fluidised bed boiler, operating experience *(German)* 87−71940
district heating steam turbines, optimum load distribution *(Russian)* 86−33048
district heating system using satellite turbine systems with thermal storage, for industrial conurbations *(German)* 85−60021
Donald C. Cook nucl. power plant, incore movable detector spares requirement evaluation 88−11006
Dow Chemical coal gasification combined-cycle plant 86−33078
drum boiler control using multivariable self tuning regulators 87−9333
dry additive process for flue gas desulphurisation in power plants, use of $Ca(OH)_2$ and $CaCO_3$ *(German)* 87−30359
duct flow meas., velocity traverse, calibrated orifice and tracer gas methods 87−77463
Dutch Flevo 180 MW thermal power plant, power and voltage control loop modelling 87−4554
dynamic models of automatic voltage regulation and turbine systems 86−51172
earthing, computer aided computation *(Croatian)* 87−22001
Eastman Falls project, development of small hydroelectric power plant, case study 86−33202
economic impact of availability for 500 MW power plant 86−61348
economic laws, basic principles *(Slovenian)* 88−23320
economics of replacement of old generating plant by new 86−12655
efficiency improvement of fossil-fired power plants through dressed coal production 88−55162
efficiency improvement planning, nomogram for capital investment estimation 86−107
efficiency improvements and modifications to power plants 86−32891
Egyptian solar energy programme and prospects 85−9567
elec. network energy loss prediction and anal. using regression models *(Russian)* 87−64113
electric connections, principal ccts. reliability anal. 85−64826
electric generators in power plants, permissible stator and rotor loads 85−48935
electric power generation facility location equity in California 86−12533
electric power industry autonomous controller appls. 86−44852
electric power plant construction schedules *(Croatian)* 85−65015
electric power supply in China, power stations and energy resources *(German)* 88−30544
electric power system develop., Korea 86−50886
electric utility decision support system for investment in new technology 87−57594
electric utility energy storage systems for peakshaving 86−12997
electric utility power plants, new generation 86−56518
electrical equipment in nuclear power plants, brittleness of metals, critical temperature *(Russian)* 86−25692
electrical equipment reference series 88−11580
electrical power plant emergency operation, effects on power system freq. transients control 87−71594
electrical raceway system dynamic testing on 1/3 scale models 85−63984
electricity generating plants decentralisation *(German)* 86−25678
electricity supply and demand, power plant cost escalation effects 86−56322
electricity supply industry power plant construction, investing under regulatory uncertainty 87−9089
electricity supply systems, energy storage and management *(German)* 86−50875
electrochemical corrosion of carbon steel and stainless steel in flow of demineralised water 87−71931

power plants continued
electrochemical power plants with methane feed and high-temperature fuel cells 88−69231
electromagnetic iron separator with water cooling of Kachkanar heat and power plant 85−32346
electromagnetic sectionalization of electric power plants 87−22112
electronic data processing program for district heat production costs calc. *(German)* 87−9342
electronic time-lag relays in automatically controlled electric power plants *(Croatian)* 88−5806
electronics in social development, conf., Lucknow, India (Oct. 1986) 87−72659
electrostatically enhanced fabric filter plant for fly ash filtration, operating characterisation 88−11072
Elred process for pig iron and electrical power generation *(German)* 85−5783

fossil-fuel power plant life extension strategy guidelines 87−57901
fossil-fuel power plant long-term lay-up and reactivation guidelines 87−64407
fossil-fuel power plant stack effluent dispersion, computer model validation 86−12659
fossil-fuel power plant water-steam cycle chemistry guidelines 86−65941
fossil-fueled and nuclear power plants, IEEE recommended practice for system identification 85−59906
fossil-fueled power plant, transfer of project management in US/Taiwan joint venture 85−33065
fossil-fueled power plant, water-steam cycle, steady-state simulation model 85−60012
fossil-fueled power plants, descriptions of components, systems and structures, IEEE recommended practice 87−22126
fossil-fueled power plants management, construction change control 86−33115
fossil-fuelled power plant heat rate improvement workshop, St. Louis, MO, USA (Sept. 1983) 85−60007
fossil-fuelled power plant piping hangers, planned inspection 88−55179
fossil-fuelled power plants, Siemens Teleperm NE control system using microelectronics *(German)* 86−45153
foundation structures study of Oh-ita power plant, liquified natural gas fueled *(Japanese)* 88−43037

power plants continued
Francis turbine plants, options in rehabilitation and modernisation 87−72048
French nuclear power, problems and development goals *(German)* 85−48671
French nuclear power program 87−71851
fuel bill reduction by computerised performance monitoring 86−44861
fuel cell, 40 kW natural gas powered, field tests 85−21526
fuel cell, expansion planning on actual utility systems 85−9460
fuel cell, R&D efforts in United States and Japan 85−9810
fuel cell, self-commutated invertor appl. 87−43228
fuel cell cogeneration power plants, remote monitoring and data acquisition 85−48915
fuel cell power plant, controllability anal. 86−61446
fuel cell power plant, packed-column direct-contact cooler *(Japanese)* 86−61731
fuel cell power plant, transportable, for US Army 85−48917
fuel cell power plant financial and strategic planning benefits 86−56942
fuel cell power plant powered by processed landfill gas, economic viability 87−64498
fuel cell power plants, commercial development in USA 85−60412
fuel cell power plants, economics and performance 85−48916
fuel cell power plants, load following characteristics *(Japanese)* 85−5033
fuel cell turbine-compressor development *(Japanese)* 86−61732
fuel choice in new fossil-fuel power plants in USA (1955-79) 86−51442
fuel combustion heat, conversion into work 86−12650
fuel purchases with planned procurement strategy 85−38442
fuels, flame speed and flashback gradient for simulated biomass gasification products 85−48669
functional conversion method for optimisation of operating conditions *(Russian)* 87−4562
garbage burning power plants, design requirements 86−33164
gas insulated minisubstation for geothermal power plant in desert and chemically corrosive environments 87−36079
gas turbine, alternative engine and cycle potential for increasing efficiency 86−51484
gas turbine cogeneration plant, for Hawaiian refinery 85−15902
gas turbine cogeneration power plants, thermal cycles, legislation, environment and economics 86−25937
gas turbine generators with waste heat utilisation from exhaust gases 86−33172
gas turbine power plant, nonregenerative, standard cycles *(Russian)* 86−56650
gas turbine power plant for offshore oil platforms 85−39403
gas turbine power plants, standardising the technical-economic operational characts., summary 85−4963
gas turbine reliability improvement, utility economic benefit modelling 86−61408
gas turbine topping cycle cogeneration system, MTI plant for General Motors 85−21490
gas turbine-steam turbine combined cycle using two stepheating by coal and oil combustion *(Japanese)* 86−39538
gas turbine/waste heat boiler cogeneration plants, optimal planning model 86−45215
gas-fired 500 kW power plant 87−30467
gas/steam cycle power plants for Hungarian power plant construction programme completion *(Hungarian)* 87−15504
gasification, Third Annual EPRI Contractors' Conference, overview 85−4728
gasification combined-cycle and pulverised coal unit cost comparison by system expansion analysis 87−15529
general construction survey 88−55095
generating plant technology, worldwide construction and develop. initiatives 88−18314
generation plant, modeling of cold-standby redundancy with start-up delay [power plants] 88−10936
generation schedule optimisation with nonlinear incremental cost curves 88−23714
generator transformer reliability improvement for 20 MW power units *(Polish)* 87−57862
generators, automatic field control stabilisation, control quality *(Russian)* 88−62297
generators and large motors, monitoring 86−45343
generators in French nuclear power plants, monitoring experience 86−70874
generators in power plants, life extension methods 86−70876
generators under cyclic duty, life extension design considerations 86−70877
Genpeg hydroelectric power plant, hydroelectric generator operation and cooling 85−43892
GEODE power plant for telecom. facilities 87−36008
geothermal, Heber binary cycle plant in Southern California 87−4602
geothermal binary power plants, vaporizer and evaporative condenser effects on electricity costs 85−53583
geothermal power plant, Heber binary cycle project 85−53584
geothermal power plants, low-grade, exploitation in UK with minimal environmental consequences 85−27144
geothermal power plants, mobile analytical laboratory 86−61411
geothermal power plants producing electricity, salts and fresh water *(Russian)* 85−38881
Greek thermal power plants optimisation, boiler dynamic behaviour 88−69139
grid connected photovoltaic plant TISO 15, performances 86−45300
grounding system optimised for cogeneration unit 88−11056
halogen leak detection techniques for power plant condenser vacuum systems *(German)* 85−21460
Hameln Afferde district heat power plant, atmospheric static FBC, operating experience *(German)* 87−71939
hazardous waste management for power plants 86−33082
header-type, high-pressure feedwater heaters 87−57853
heat and power cogeneration power plants, equipment, operation and economics 85−15848
heat and power cogeneration systems for Japanese commercial buildings 85−38818
heat and power production, new techniques, primary energy resources *(German)* 86−51447
heat exchanger and cooling systems fault diagnosis using artificial intelligence 87−71950
heat exchanger steam pressure calc. microcomputer program in BASIC 88−30557
heat pipe Rankine engine for small-scale power generation 86−33131

power plants continued
heat power plants using organic fluid as heat engine working medium *(German)* 85−4877
heat power plants using organic fluid for heat engines, operational behaviour *(German)* 85−4878
heat pump/electric generator power plants, Stirling engine developments 85−60574
heat rate improvement workshop, San Francisco, CA, USA (Oct. 1985) 87−22143
heat storage system based on chemical reactions, for solar power stations, thermodynamics anal. 86−19524
heat transfer theory in irreversible power plants 88−69141
heated component temp. distrib. determ. from similarity factors *(German)* 86−6559
Heber, CA (USA) binary-cycle geothermal demonstration power plant technical characteristics 86−61410
HEMP excitation, measured power system response data extrapolation 88−75234
Henry W. Pirkey 640 MW lignite fired power plant, engineering and construction 86−33092
HF interference voltage meas. for fault location in power plant blocks *(German)* 86−18894
Higashi Niigata combined cycle plant 86−33079
High technology in power industry conf. Montana, USA (Aug. 1986) 87−65078
high temp. plants operation *(German)* 87−78462
high temp. solar thermal appls., Spanish activities and CESA-I project 86−6665
high-capacity power generating plants, gas and PF distrib. over individual rows of burners 85−48854
Hillsborough County, Florida, solid waste energy recovery project 87−64381
HOMACH thermomechanical generator, Stirling power source for unattended operation 85−53848
HTGR Steam Cycle/Cogeneration Lead Plant design 86−33017
HTR 100 reactor in industrial nuclear plants, energy storage appls *(German)* 87−64775
HTR nuclear power plants for cogeneration 85−43683
human engineering for control panel in nuclear powerplant *(Japanese)* 86−38269
human factors R and D 86−45079
human reliability anal., cognitive modelling 88−62175
Hungarian power plant system, appl. of combined cycle and gas turbine plants *(Hungarian)* 87−15503
Huntley-67 fossil fueled power plant, life extension 88−75439
HV high-power invertor drive acceptance in power plants 86−39938
HV insulation site testing methods in power plants 87−64357
HV oil-filled cables for hydroelectric power plants, electric field strengths 86−44978
HV power plants, EMI problems in Poland *(German)* 88−36906
HVDC transmission and BWR nuclear power plant, hybrid control system develop. 86−65677
hybrid photovoltaic/wind/diesel energy systems 85−4862
hybrid power systems using closed cycle vapour turbogenerators, telecommunication appls. 86−61067
hybrid solar heated and fossil-fueled gas turbine power plant, part, load behaviour 87−51108
hydro facilities, small, automation trends 87−35832
hydro-plant performance models in economic operation studies, optimal parameter estimation 87−30420
Hydro-Quebec's power system, hydro-thermal power scheduling model 86−56365
hydro-thermal power system, optimal power scheduling by computer 87−42322
hydroelectric generator-motor development pumped-storage power plant 86−33203
hydroelectric generators, pumping-pad bearings, Brown Boveri design 86−25969
hydroelectric generators with full water cooling, development prospects 86−33278
hydroelectric microstation, microcomputer controlled 86−6605
hydroelectric power plant, governing stability and surge simulation of hydraulic turbines 85−60063
hydroelectric power plant, Strielva, Norway, low-cost construction techniques 86−65968
hydroelectric power plant power generation, energy resources and planning reliability 86−12727
hydroelectric power plant reliability, EPRI study 86−33198
hydroelectric power plant with unregulated spilling water, optimal control 88−30610
hydroelectric power plants, 10 MW or less, present state and future prospects of worldwide construction *(Russian)* 86−33192
hydroelectric power plants, aseismic electric equipment design 86−51506
hydroelectric power plants, cascade control considerations *(Slovenian)* 85−38892
hydroelectric power plants, hydromechanical equipment *(Rumanian)* 86−33189
hydroelectric power plants, intake design to avoid free-surface vortices 86−33199
hydroelectric power plants, load controlled energy generation *(German)* 86−19147
hydroelectric power plants, micro, criteria for equipment selection 87−15582
hydroelectric power plants, multimachine, reactive power control and power system connection *(Croatian)* 87−22159
hydroelectric power plants, optimal control 87−42705
hydroelectric power plants, Procontrol P system, appl. to La Fortuna storage station 87−22157
hydroelectric power plants, small, design and selection of hydraulic turbines 86−65964
hydroelectric power plants, small scale, gate design and construction 86−65965
hydroelectric power plants at Wisconsin Electric, remote automated operation 86−33200
hydroelectric power plants with 100-1000 kVA synchronous generators, automation *(Croatian)* 85−32376
hydroelectric power plants with Kaplan turbines, large perturbations anal. 86−6593
hydroelectric power plants with microprocessor control, processes and regulator parameter selection, mathematical modelling *(Croatian)* 87−22158

power plants continued
hydropower development, small scale, in Pacific Northwestern United States, political and economic effects 86−65966
hydrothermal power system, decomp. techniques for short-term operation planning, load dispatching 86−50842
hydrothermal power system scheduling using progressive optimality algorithm 86−45229
HYSS, Pacific Gas and Electricity's hydroelectric system scheduling package 86−45233
IDERS, interactive design of energy recovery systems 87−57725
IMW pilot plant, coal recycle, RESOX sulphur reduction process 85−27282
incipient failure detection conference, Lake Buena Vista, FL, USA (Oct. 1984) 87−22144
independent power producer's construction of power stations 88−5419
Indian electric power plant sector develop. 88−17349
Indian thermal power plant, MHD system retrofit feasibility 86−65899
induction generator energy recovery systems, applications and control considerations 85−27422
induction generator plant protection 86−70904
induction generators for hydraulic power generation utilising waste water 86−33392
induction generators for hydraulic power plants, computer aided simulation and anal. 85−38901
industrial combined heat and power plants, economic efficiency anal. *(German)* 85−4874
industrial flue gases waste heat recovery for electric power generation and cogeneration *(Rumanian)* 85−27289
industrial market potential of small heat and power units *(Dutch)* 86−45839
industrial nuclear power plants, microcomputer based fault tolerant control system 86−12576
industrial plants, Benson boiler conversion to coal fired operation *(German)* 85−60579
industrial plants, estimation and control concepts 85−38835
industrial power plant, retrofitting with automatic controls, for shutdown and startup *(German)* 85−21420
industrial power plant automation using Pro Master control system *(Croatian)* 88−42917
industrial power plant design, construction and operation *(German)* 85−48822
industrial power plant energy management systems 86−33868
industrial power plant turbine design optimisation *(German)* 86−6576
industrial power plant with circulating FBC, design, construction, commissioning *(German)* 88−23738
industrial power plants, trends in load management 85−39373
industrial powerhouse control by microprocessor-based system 86−19076
industrial powerhouse system coordination paper mill appl. 86−33886
installation employing Poisson eq., elec. load distrib. description *(Russian)* 88−10721
installation optimisation, planning and operation *(German)* 86−32885
instrumentation and control for power plants, needs and trends 85−48643
instrumentation and control system retrofitting 86−45182
instrumentation cables in power plants 86−53101
insulating materials for nuclear power plants, multistress behaviour and insulation structures 86−47909
integrated coal gasification combined cycle power plants 87−4571
integrated coal gasification-combined cycle power plant, coproduction of methanol and electricity 85−27280
integrated commercialization analysis for new power generation technologies, fuel cell power plant example 85−16701
integrated control energy management system. 86−33027
integrated gasification combined cycle concept simplification 87−15511
integrated gasification combined cycle power plant assessment with British Gas/Lurgi gasifier 86−61341
integrated gasification combined cycle systems, commercial scale demonstration power plant 85−38828
integrated gasification combined-cycle power stations, off-design performance 87−78456
integrated gasification-combined cycle power plant heat exchanger alloy and coating corrosion obs. 86−46391
integrated power and building services management system for British Telecom 87−21878
integrated solar thermal electric complexes 85−9803
intelligent power plants 86−56519
intensive automatic excitation control systems influence on dynamic behaviour *(Rumanian)* 87−9522
interactive computer system for selective decision making, nuclear power plant site selection *(Russian)* 87−15120
interactive graphic system for control board arrangement drawings *(Croatian)* 87−22003
interdependent power plant outages, reliability calc. 85−27278
intervention power and inherent control capacity of a coal-fired BC-100 power unit under emergency conditions *(Polish)* 86−19098
investment cost recovery and incentives for power plant construction 88−42920
ion chromatography for water and steam anal. 86−33084
Ione cogeneration plant, circulating fluid bed combustion, financial structure 86−19080
Irish Electricity Supply Board overall system efficiency improvement by combined-cycle plants 86−45158
isolated phase generator busbars for power plant reliability improvements 88−55103
isolated transmission network of West Berlin, load dispatching and power plant operation *(German)* 85−38477
Japanese coal-fired power plant practices compared with US practices 87−71962
Japanese National Railways' power supply system and plants 86−61789
Jebel Ali heat and power plant in Dubai with sea water desalination plant *(German)* 88−17342
jointly owned generating unit of interconnected system, cost and reliability eval. 88−10733
Karl Carstens ferryboat, electrical equipment *(German)* 87−43578
Kentucky no.9 coal cleaning for improved power plant performance 87−51019
Kentucky No. 9 Seam cleaned coals, combustion characterisation 87−57728
Keystone coal gasification combined cycle project 86−33127
Kinda Dam hydroelectric power plant, Burma's power supply contribution 88−69176
Kolyma Hydroelectric Power Plant with thyristor independent excitation system for generators 87−78538

power plants continued
Krsko Nuclear Power Plant, operating experience *(German)* 87−78323
KRW coal gasification process 86−6669
Kuwait, assessment and prospects for energy resources, economic anal. of power plants 88−75258
Kuwaiti Institute for Scientific Research, solar energy programme 85−9566
La Grande hydroelectric plant, develop and operation 87−30419
Lagrangian reduction of search-range for large-scale unit commitment 87−57492
large current equipment for power plants [electric generators] *(Polish)* 85−21554
large scale, simulator model development procedure 86−18916
large-scale power plants, explosion protection measures effectiveness investigation 85−48856
larger generating plant installation and commissioning problems and countermeasures 86−12538
laser Doppler vibrometer testing for power plant diagnostics 87−63575
Lausward combined cycle power plant, pollution, NO_x reduction *(German)* 87−15521
Lausward Power Plant brown coal dust explosion, cause, cost, consequences *(German)* 88−30561
Leibstadt nuclear plant, moisture preseparator and special crossunder pipe separator 87−71857
level control system for storage vessels, performance 86−25903
life expectancy improvement by pipe maintenance and inspection 88−30431
life extension, pipeline system example *(German)* 86−56511
life extension, preliminary test and ERA approach 86−56591
life extension, risk and regulatory issues 87−71768
life extension and performance improvement by using ceramics 87−50998
life extension by corrosion control 87−51002
life extension economics, competitive production strategies 88−10942
lifetime evaluation using computerised temperature and pressure meas. 85−43664
lifetime extension project risk analysis techniques 87−51837
lighting, indoor, computer program for design engineers *(Croatian)* 87−22890
lightning induced voltage observations of power distribution lines 86−51097
lightning-produced overvoltages in cable ducts, simulation 88−8518
lignite fired boiler at Antelope Valley power plant, design and operation 86−33091
lignite fueled cogeneration power plants, small scale, assessment of options, economics 85−48862
lignite open-cut mine computer-controlled centre for Loy Yang power plant 87−15418
limited scope simulator, high fidelity fossil power plant simulator for control board training 87−15545
linear programming for unit commitment of power systems with thermal power plants 86−32634
linear solar concentrator with tubular absorber, operating temperatures calc. for optimum power output 85−53609
liquefied natural gas (LNG) cryogenic power generation system in Japan 86−33226
liquid metal-cooled reactor design, low cost 86−33013
live-load valve packing to stop leakage in nuclear power plants, exposure reduction 86−65822
LMFBR pool plant, cost-competitive inherently safe design 86−33015
LMFBR pool plant, inherent safety 86−33016
LNG cryogenic power generating plant for Tokyo Electric Power Company *(Japanese)* 87−64491
LNG power generation systems and chemical systems, energy utilisation diagrams 86−56678
load dispatching, economic effectiveness of KSWDB computer system *(Polish)* 86−18913
load forecasting for thermal-hydroelectric power plant mix, daily operational planning 86−56394
load frequency control system, parameter identification 86−39017
load management in AEW supply area, energy consumption optimisation by remote computer control *(German)* 87−64037
logic simulation for basic circuit design using Petri-networks *(German)* 87−30115
low speed diesel engine generator for 40 MW barge plant, control system 86−33179
low-voltage plants, spare parts stocking *(German)* 86−18905
lunar power plants versus solar power satellites, practical and cost comparison 85−60083
Lurie systems with multiple nonlinearities, robustness anal. 87−64331
LWR plant status monitoring 86−39502
LWR power plants, fuel cycle energy requirements and costs 85−59938
LWRs, 200 MWe PIUS modular design 86−6526
machines with multishaft rotors and fluid film bearings, unbalance response determination 85−60143
maintainability design guide 86−51299
maintainability effectiveness evaluation and enhancement 86−51297
maintenance cost reduction by Predictive Maintenance Program 87−9382
maintenance management and work planning for reduced costs *(German)* 88−10928
maintenance management system, automated, effect on organizational communication 88−30331
maintenance of power plants, planning and economic execution *(German)* 85−27139
maintenance planning, financial and labour costs *(Russian)* 86−45042
maintenance strategy optimization for increasing power unit availability 87−15516
maintenance using IR thermography 87−14168
make-up water, ultrafiltration for total organic carbon control 88−11062
Mammoth geothermal power plant, operational characts. 87−42688
man-machine interfaces verification using models and mockups 86−45171
management control at power plant projects 86−61349
manufacture and supply by Northern Engineering Industries for power plants 86−52228
manufacturing industries, computer aided feasibility study of combined heat and power plants *(German)* 85−16484
marine heat and power generation plant, optimal planning method 86−45218
mass burning technique of municipal solid waste for energy 86−32911
Matimba power plant, location, climate, environment, primary energy resources 88−48784
MEAC, Maintenance Equipment Appl. Center, for nuclear power plant maintenance technology transfer 87−64250

power plants continued
MELRAP-T, a program for upgrading the reliability and availability of thermal-power plants *(Japanese)* 85−4896
METADAT data acquisition system for surveys in large industrial plant construction 87−70480
metal detection system, mill protection *(Russian)* 86−25852
methanol fuel cell power source 86−61733
micro hydro power plants, standardisation 87−57947
micro-hydro−some low cost alternatives 85−38890
microcomputer appls., planning, control and monitoring *(Polish)* 86−18911
microcomputer appls. to multiplexing and distributed control 86−33106
microcomputer power plant optimisation 86−33026
microhydroelectric power plants, rotary pumps in turbine regime *(Rumanian)* 85−21506
microhydropower systems supplying 5 or 10 kW, research directions 86−65962
microprocessor control, needs and system aspects for telephone exchange monitoring 85−64855
microprocessor control, report from large telephone office installation 85−64856
microprocessor-based distributed digital control system for power plant retrofitting 88−42919
microprocessor-controlled system battery plant, central office power concept 85−65021
microprocessors and power plant automation 87−35833
microwave relays, power supply and environmental adaptation 86−65985
Milan, choice of energy source for local and national corporations, advanced fuel systems *(Italian)* 87−64231
mill protection against covering up, active power control *(Polish)* 86−19063
mini-compressed air energy storage plant analysis and evaluation 87−16069
Moabit environment-compatible heat-power plant with circulating fluidised bed combustion *(German)* 87−64338
mobile power plant protective cut-out *(Russian)* 85−59988
mobile power plant simulator development 87−15407
model development for training simulators, coupling processes 85−59851
model development for training simulators, modularisation 85−59850
model-based failure diagnosis 88−36912
modifications for availability and performance enhancement 86−45044
modular high temp. reactor prospects 86−70791
Modular Modelling System (MMS) development, power plant dynamic simulation code 85−59849
modular solar power plants with quasi-paraboloidal concentrators 85−43893
modular turbocharged pressurised fluidised bed combustion boiler 86−61336
modularised turbocharged pressurised fluidised bed combustion plant assessment 86−61335
moisture separator reheater and condenser retrofitting for improved plant availability and heat rate 86−39561
molten carbonate fuel cell power generating system conceptual study *(Japanese)* 86−61725
molten carbonate fuel cell stack development *(Japanese)* 86−61728
molten carbonate fuel cell stack productivity and durability 86−13025
monitoring and control measuring instrumentation for power consumption *(Russian)* 86−39250
monitoring and control system, HIACS-3000 87−42639
monitoring diagnostics of coal power plants using fibre optic endoscope *(German)* 85−27263
monitoring of power plant performance, engineering, accuracy and simulation 85−15832
monitoring systems, computerised, reliability improvement case studies 88−30433
motor design, material and control innovations 86−51565
motor reliability in power plant appls., industry assessment study 86−56701
multi-heat source thermodynamic cycle power plants 85−60009
multi-megawatt fuel cells and power plants, features and future trends 85−21793
multi-speed motor drives for power plant fans and pumps 85−32739
multi-unit gas/steam combined cycle power plant, group load control 86−45174
multibed combustion plants as turnkey boiler installations, desulphurisation 86−33024
multifuel combustion systems, computer simulated performance anal. 85−60013
multifuels fluidised bed combustion testing in both bubbling and circulating bed modes, comparative test results 85−21449
multireservoir hydro-thermal power system, mathematical model for optimal operation 86−32637
multivariable control systems design and appl. 87−71969
multivariable nonminimum phase pilot plant, self tuning control 85−59993
municipal solid waste for steam and power generation in Warren County, New Jersey 87−57877
municipal waste burning power plant, using waterwalled incinerators, operation and performance 85−59981
natural gas for power stations, control using automatic calorimeters *(Russian)* 87−4544
natural-draught cooling towers, air-intake height optimisation *(Czech)* 86−33063
Netherlands nuclear power plant air filter testing and monitoring 87−4506
nitinol heat engine power plant system installation andcost optimization 85−53549
Nizhnekamskaya and Cheboksary Hydroelectric Power Plants, excitation system for hydroelectric generators 87−78539
noise control of induced draught fans at fossil power plants 88−17358
North Sea installations, electricity generating capacity, technical features *(Norwegian)* 85−27269
Northeast Utilities power plant maintenance performance indicators 88−10938
nuclear, Angra 1 power plant probabilistic safety assessment, event-tree anal. 87−42587
nuclear, gas-cooled reactors for advanced terrestrial appl. 87−42621
nuclear, maintenance management systems, functional requirements 87−9287
nuclear, safety training via emulators 87−50948
nuclear, simulator qualification using the EPRI methodology 87−78393
nuclear, training of operating staff, experience and development 86−70758
nuclear and coal fired, holographic NDT appls. 87−22032
nuclear and fossil power plants, flaw detection and assessment 87−71955
nuclear and fossil-fired power plants, Water Quality Audits 86−32969
nuclear and thermal power plant maintenance, reliability information system *(German)* 86−25702
power plants continued
nuclear energy development, power plant and reactor aspects *(Rumanian)* 86−32943
nuclear fuel brokerage, effects on nuclear power plant operators *(German)* 85−38612
nuclear fuel cycle optimisation using multi-objective stochastic linear programming 87−78257
nuclear heating plant, circulating air-cooled water supply *(Russian)* 86−61219
nuclear operations personnel computer based training 87−71852
nuclear plant accident sequences event trees and their treatment on PC computers 87−57758
nuclear plant analyser, interactive power plant computer simulation for thermal-hydraulic behaviour 85−59916
Nuclear Plant Analyzer, review 88−10991
nuclear plant dual speed induction motors for cooling system pumps 86−56535
nuclear plant engineering and operations improvement using configuration control 87−50938
nuclear plant equipment qualification 87−57757
nuclear plant feedwater system component faults, classification and anal. 86−51224
nuclear plant feedwater treatment *(German)* 87−57799
nuclear plant maintenance, trend anal. 86−45067
nuclear plant power factor correction, technical problems, economic benefits 87−71872
nuclear plant preventive maintenance support expert system *(Japanese)* 86−32980
nuclear plant shutdown probabilistic safety assessment, process flow model appl. 87−42588
nuclear plants, 1000 MW turbogenerators, parameters and structural features 87−42777
nuclear plants, reactor vessels dosimetry *(Hungarian)* 87−64247
nuclear plants, robotic maintenance system 85−27261
nuclear plants, transient anal. by appl. of transfer fns. *(Croatian)* 88−10964
nuclear plants Class 1ED equipment separation, IEEE STD 384, test program develop. and results 87−64254
nuclear plants instrumentation and surveillance systems, optical data transmission method 86−49700
nuclear plants process instrumentation, micro electronic surveillance and calibration techniques 87−70394
nuclear power block bulk compensator, dynamic tests *(Russian)* 86−51197
nuclear power plant, cascaded state feedback control 87−35730
nuclear power plant, digital control system, NURECS-3000 *(Japanese)* 86−39304
nuclear power plant, fault tree analysis, expert system 87−50956
nuclear power plant, human performance evaluation system 86−45081
nuclear power plant, project management impact on construction lead times 85−43705
nuclear power plant, simulator qualification using engineering computer codes 86−18961
nuclear power plant, spare parts classification and procurement program 87−71853
nuclear power plant, training simulator interface system software 86−61889
nuclear power plant, training simulators of EDF *(French)* 86−18945
nuclear power plant, UNIRAM modelling for availability improvement 87−9268
nuclear power plant advanced concepts reviews, Chernobyl accident implications 87−42618
nuclear power plant analyser, computer codes for system anal. 85−59915
nuclear power plant as-built efforts, photogrammetry appl. 87−71858
nuclear power plant at Krsko, Yugoslavia, electrical power generation system *(Slovenian)* 85−38615
nuclear power plant auxiliary distribution system upgrading, reliability, availability and maintainability goals 87−9279
nuclear power plant availability impact of limiting conditions for operation 87−9271
nuclear power plant availability improvement by reactor trip prediction software 87−9317
nuclear power plant BWR load dispatching and regulation 86−33009
nuclear power plant commissioning, chemical regime of nuclear power plant commissioning *(Rumanian)* 85−53391
nuclear power plant component decontamination by ice-blasting *(Japanese)* 87−78258
nuclear power plant component reliability assessment data sources 87−9284
nuclear power plant computer control system, operating experience 86−70762
nuclear power plant computer replacement/upgrade project, software and user interface considerations 86−12600
nuclear power plant condition monitoring of cables, motors, solenoids, circuit breakers and transmitters 87−9252
nuclear power plant construction project in US, technical and economic aspects 87−71863
nuclear power plant containment coatings 86−25706
nuclear power plant control room design reviews, human factors 86−45093
nuclear power plant control rooms, human factors 86−45075
nuclear power plant control rooms, IEC design standard 86−45095
nuclear power plant conversion to coal firing, eval. 85−59891
nuclear power plant dependent event data classification system 87−9280
nuclear power plant design, standardised Westinghouse NUPACK system 85−43684
nuclear power plant design safety requirements *(Croatian)* 87−15441
nuclear power plant design simplification using EPRI advanced LWR program 87−30308
nuclear power plant dismantling and waste disposal problems 86−45101
nuclear power plant disturbance anal., digital simulation 85−59917
nuclear power plant equipment, requirements in production *(Croatian)* 87−78284
nuclear power plant failure-on-demand model, time-related parameter requirement 87−9282
nuclear power plant high reliability control system (NURECS-3000), fault tolerant system 86−70752
nuclear power plant human factors, conf., Monterey, CA, USA (June 1985) 86−40383
nuclear power plant human performance data collection, error rates from control room simulators 86−45088
nuclear power plant in-service inspection and reliability programme 87−9285
nuclear power plant instrumentation and control system, improvements to user interface *(Japanese)* 88−30450

power plants continued
nuclear power plant Integrated Living Schedule Program 86−61241
nuclear power plant life extension, sampling programs of reevaluation 87−71860
nuclear power plant maintenance, IEEE recommendations based on reliability concepts 87−9277
nuclear power plant maintenance and human performance programs 86−45078
nuclear power plant neutral oxygenated water conditions appl. efficiency for corrosion protection *(Russian)* 87−4499
nuclear power plant operation in Taiwan 86−70759
nuclear power plant operation simplification by reliability data collection 87−9273
nuclear power plant operator errors during simulator training 87−42593
nuclear power plant operator training simulator, Grafenrheinfeld PWR plant 87−50930
nuclear power plant operators, simulator training 87−15430
nuclear power plant performance improvement using traditional engineering anal., life extension 87−30312
nuclear power plant personnel, training simulation, legislation effects in USA 85−54068
nuclear power plant piping systems, seismic restraint reduction approach 87−71908
nuclear power plant probabilistic risk assessment microcomputer software 87−9269
nuclear power plant pumps, pulse end seal testing *(Russian)* 86−61221
nuclear power plant reliability-centred maintenance progress report 87−9281
nuclear power plant reliability-centred maintenance techniques 87−5300
nuclear power plant repair using Isis robot system *(French, English)* 87−15460
nuclear power plant reversible valves, hydraulic characts. and operating lifetime *(Russian)* 86−61220
nuclear power plant risk anal. methodology *(Japanese)* 86−51216
nuclear power plant safety, BETA test facility using induction heating, computer routine verification *(German)* 86−25700
nuclear power plant safety, cause-consequence relation disturbance model 85−48677
nuclear power plant safety, human factors *(Hungarian)* 85−32280
nuclear power plant safety, human factors perspectives, European activities 86−45076
nuclear power plant safety surveillance, online plant analyser for control room utilisation 85−59918
nuclear power plant simulation and reactor safety 87−71892
nuclear power plant simulation using advanced simulation codes and workstation 86−18960
nuclear power plant simulator, design, development and operation 88−10993
nuclear power plant simulator for demonstration purposes, PWR appl., NOPS 88−55155
nuclear power plant siting, meteorological considerations *(Croatian)* 85−59871
nuclear power plant snubber reduction program, cost benefit 86−61243
nuclear power plant staff training develop. 86−51226
nuclear power plant status monitor design and operation 87−9276
nuclear power plant steam generator dynamics, math. models *(Czech)* 86−65819
nuclear power plant steam generator dynamics anal. using Rieman's method *(Czech)* 87−9247
nuclear power plant steel pipes, ultrasonic flaw detection and continuity operational control *(Russian)* 86−65824
nuclear power plant training simulator data collection and anal. 86−45091
nuclear power plant turbines life extension by implementation of steam generators 87−50922
nuclear power plant turbines life extension by implementation of coal fired steam generators 87−50947
nuclear power plant water cooled VVER 1000 reactor, automatic parameter control system *(Russian)* 86−65870
nuclear power plant welding problems 86−32966
nuclear power plants, 1984 world survey *(German)* 85−38610
nuclear power plants, advanced monitor, control, diagnosis and guidance systems 86−70793
nuclear power plants, artificial intelligence research at Electric Power Research Institute 86−70764
nuclear power plants, chemical decontamination 85−48700
nuclear power plants, corrosion-erosion in PWR secondary systems 86−33012
nuclear power plants, database management systems for complex system's safe operation 85−59919
nuclear power plants, emergency management decision support, system design aspects 85−38622
nuclear power plants, epoxy coating penetration by contaminants 87−71867
nuclear power plants, exterior reliability information systems *(Czech)* 86−65820
nuclear power plants, financing of small systems 86−12574
nuclear power plants, human errors as sources of disturbances, Sweden 86−45082
nuclear power plants, human factors and ergonomics 86−45077
nuclear power plants, independent technical reviews of surveillance test procedures 85−43706
nuclear power plants, information retrieval algorithms for transient and emergency states *(Polish)* 86−18931
nuclear power plants, man-machine design verification 86−45089
nuclear power plants, man-machine system verification in the NORS/HALOexperiment [nuclear reactors] 86−45117
nuclear power plants, MINET computer code validation study using steam generator data 85−59923
nuclear power plants, operation and construction in Western Germany *(German)* 85−48672
nuclear power plants, periodical safety revaluation 86−70761
nuclear power plants, process information system, operator support 86−70763
nuclear power plants, qualification tests for class 1E electrical equipment 86−65837
nuclear power plants, quality assurance for maintenance work *(German)* 85−59886
nuclear power plants, removal from operation *(Russian)* 87−35725
nuclear power plants, risk reduction through human perform. management 88−11008
nuclear power plants, safety prediction technique 87−15489
power plants continued
nuclear power plants, safety-related piping system, snubber reduction 87−71866
nuclear power plants, seismic requalification advancements 87−71868
nuclear power plants, short-circuit current boosting from induction motors *(Russian)* 86−25697
nuclear power plants, simulators for training and operation 85−59921
nuclear power plants, temp. meas., some problems *(Czech)* 86−65821
nuclear power plants, training simulator life cycle support 85−54071
nuclear power plants, ultrasonic and eddy current materials testing *(French)* 86−25689
nuclear power plants, vital area determination techniques 87−22054
nuclear power plants, work structure and plant personnel 86−45085
nuclear power plants construction cost comparison between France and USA 87−15465
nuclear power plants final safety analysis report (FSAR), organised approach 86−56540
nuclear power plants financial anal. 87−9253
nuclear power plants flammable pool fire damage, probabilistic model 87−4507
nuclear power plants in France, present situation and future prospects *(French)* 85−32292
nuclear power plants in Switzerland, safe operational experience 86−70785
nuclear power plants in Transylvania, optimal cooling system *(Rumanian)* 86−39302
nuclear power plants in USA, low power units for second nuclear era *(German)* 85−38611
nuclear power plants maintenance improvement for increased availability 86−32963
nuclear power plants parallel operation, higher reliability, math. modelling *(Spanish)* 87−50636
nuclear power plants with binary steam ammonia cycle *(French)* 86−18934
nuclear power plants with water-moderated, water-cooled reactors, power system manoeuvrability *(Russian)* 86−32940
nuclear power reactor, cost estimation within regulatory process 87−71869
nuclear power station, CAD of ventilation systems *(Russian)* 86−39296
nuclear power station computerised control boards, cognitive task anal. for design 86−45087
nuclear power station field cycle scoping anal. using microcomputers 86−56539
nuclear power station safety, comparative assessment 86−25707
nuclear power station safety guide-lines for conditions of disturbances in coolant losses *(German)* 86−39409
nuclear power station safety system reliability, influence of technical maintenance *(Russian)* 86−39295
nuclear power station scheduling and planning, commitment control 85−59893
nuclear power station steam generators, dynamic characts. and water level control *(Russian)* 86−39298
nuclear power stations, leak detection and localisation *(French)* 87−15443
nuclear reactor display systems upgrading 87−15471
nuclear reactor safety margins reevaluation for LOCAs 86−51264
nuclear reactor surveillance using noise anal. technique *(French)* 86−25743
nuclear station blackout rule, effects on nuclear plants 87−35739
nuclear steam generator, dynamic model based on multivariable domain theory 88−62095
nuclear valve stem packing improvements and gland adjustment for leakage reduction 87−9257
nuclear/fossil power plant simulation, Modular Modelling System 86−70753
offshore drilling platform, power plant for thyristor elec. drives 88−43523
oil and gas utilization efficiency in power plants 87−36286
oil to coal firing conversion of Vasteras district heating plant *(German)* 86−65930
oil to coal reconversion, stoker or pulverised coal firing, economics 86−33120
oil-fired boilers for power plant, 2-stage Bayesian method for outage rate estimation 87−51008
oil/gas fired power plant, Malaysia 87−64354
old power plant life extension and production cost model 86−25886
once-through type power plant boiler, back-up controller design using state space models *(Korean)* 87−78458
onsite fuel cell power plants, for combined heat/power generation 85−21521
Ontario Hydro fossil fuelled generating plants, life cycle assessments 88−10941
open cycle OTEC, flash evaporation effects 86−65994
open-cycle OTEC components, system studies 86−65995
operating personnel, training *(German)* 88−55164
operating personnel actions, digital simulation *(Russian)* 87−22095
operating regimes eval., computer model 87−64216
operation, command documenting systems future development goals *(German)* 85−32260
operation and monitoring system OS254E, hierarchically structured, features *(German)* 87−15543
operation management, effect on electricity cost in developing countries 88−10926
operation with reduced pollutant emissions *(German)* 85−48823
operational description and potential improvement analysis 87−64218
operational limitation of half-hourly loading maximum, optimisation *(Russian)* 87−42547
operator friendly man-machine system for computerizedpower plant automation 86−12540
operator information system development *(Czech)* 86−65794
operator training benefits of computerised simulators 87−51780
operator training simulators, fossil fueled boilers and gas turbine, survey 87−71961
operator training simulators, system-level simulation 86−45975
operator training using distributed control system simulator 87−35708
optical links for bidirectional signal transmission between power plant minicomputers *(German)* 85−3442
optical waveguide transmission lines failure anal. *(German)* 85−52329
optimal control system synthesis methods *(Hungarian)* 87−50910
optimal daily scheduling of electricity production 86−12309
optimal power flow calc., modified Newton method using quadratic approximate power flow 86−33028
optimisation by math. modeling in USSR energy sector 87−21999
optimum layout eval. using reliability theory *(Croatian)* 87−22005
Oradea thermal power plant RO-165 boiler with coal dust centrifugal concentrator, performance tests *(Rumanian)* 86−25862

power plants continued
organic coatings in simulated flue gas desulfurization environments 88−17367
organic fluid generators for heat recovery *(Rumanian)* 85−53534
organic Rankine cycle heat recovery system for waste heat to electricity conversion 85−53548
organic Rankine cycle power plants perform. under part-load and off-design conditions 86−32890
organic Rankine cycle power systems, working fluid thermal stability 85−53550
organic Rankine cycle turbogenerators for electricity production from solar ponds and geothermal sources 85−27357
organic Rankine cycle waste heat recovery systems, working fluid selection via computer assisted anal. 86−39554
OTEC and tidal power plants, review of ocean energy utilisation research 85−32405
OTEC power plant operation and underwater sound generation 86−65996
OTEC power plants, energy efficiency 86−45258
OTEC power plants, land based, site selection studies 86−66000
OTEC technology, constraints affects Jamaica's utilisation 85−32401
OTEC tropical island short-term development prospects 85−5021
outdoor lighting, computer aided computation *(Croatian)* 87−22891
overhead line fault location using FIN fixing devices *(Russian)* 86−25608
Paka (Malaysia) combined-cycle power plant burning South China Sea gas 86−61326
Pakistan rural airport hybrid power systems using wind and solar power 88−62273
Paks nuclear plant consistence gauges of hermetic spaces measured for overpressure *(Hungarian)* 87−64248
Paks nuclear power plant, semi-axial water cooling pumps starting, partial immersion of running wheels *(Hungarian)* 87−64246
paper factory installation of gas-turbine/steam combined-cycle plant *(Dutch)* 86−33885
paper mill powerhouse coordination 85−65674
paper mill powerhouse optimisation and control economics 86−26456
parabolic dish concentrator with 24 kW Stirling engine power conversion unit 87−15602
parabolic dish solar collectors, technology and appls. 85−60090
parallel diesel power plant control system design 87−78529
parallel operation, in-plant generation in industry 86−19053
particulate control, optimisation of fabric filters and electrostatic precipitators 87−50994
particulate emission control, retrofitting new scrubbers and upgrading existing units 85−15809
peat fired power plants availability *(Finnish)* 86−39548
peat for power generation in West-Kalimantan(Indonesia), economics *(Dutch)* 86−51178
peat fuel for district heating plants in Finland 85−4722
peat-fired power plants, Finland, technology, operating experience *(German)* 88−69150
Pelton turbines in micro-hydropower plants and Mirsa hydroelectric develop. *(Rumanian)* 87−30418
PERF-EXS power plant performance ES 88−55191
performance monitoring, workshop, Washington, DC, USA (Oct. 1984) 86−56521
performance monitoring and system dispatch workshop, Washington, DC, USA (Nov. 1986) 87−78229
performance monitoring for higher efficiency 87−35791
performance optimisation by microcomputer 86−12535
performance standards and efficiency assessment techniques 85−65018
performance standards programme evolution and effectiveness 87−9128
personnel, computer eval. of operator performance 86−32893
personnel training from maintenance and safety viewpoint *(German)* 87−36355
petrochemical complex utility system simulation for online management justification 86−26453
PGU-250 steam turbine-gas turbine power plants, automatic changeover system study 85−4900
pH measurements of high-purity water in power plant boilers 85−58935
phased in life extension 87−51001
Philippine nuclear power program, safety, training and economics 85−59877
phosphoric acid fuel cell power plants, capital costs assessment 88−75527
phosphoric acid fuel cells, research and development at Mitsubishi Electric 85−16226
photogrammetry, computer-based, for locating embedded inserts, power plant erection 85−15700
photovoltaic, sun tracker, two-axis universal mount, electronically controlled, design and construction 85−26319
photovoltaic central station power plants, power conditioning subsystems 86−56667
photovoltaic DELPHOS plant design, realisation and operating experience 88−5611
photovoltaic plants in utility interactive operations, experiences with three US facilities 86−39634
photovoltaic power generation system, construction, research and development 88−17470
photovoltaic power plants, cost, design and performance tradeoffs 85−53617
photovoltaic power system utility interconnection, design studies 86−65989
photovoltaic powered, DC motor driven, water pumping system, CAD and simulation 87−15613
photovoltaic system tracking and concentrator collectors, linear and Fresnel optics, cost comparison 87−9435
pipe inspection and maintenance, mobile robot design 88−49469
pipe inspection and maintenance, mobile robot design 88−49469
pipe support optimization in nuclear power plants 86−32964
piping CAD, cost effectiveness and training 85−59842
piping design using ISAP-III, integrated structural anal. program *(Japanese)* 86−51215
piping layout, computer aided design 85−4898
planned maintenance, rational monitoring and modern technology for reliable operation of power plants *(German)* 85−27140
plant maintainability, human factors 86−51298
Plant Scherer steam generator: from conception togeneration 86−25900
plasma-gasified coal as fuel in turbogenerators, KATEK power system optimisation *(Russian)* 87−57870
PMSP, plant modelling simulation program developed by Central Electricity Generating Board 87−35810
Polish power and industrial heating plant maintenance, spare parts demand forecast *(Polish)* 85−48641

power plants continued
power generating equipment, retrofitting and upgrading 86−45045
power plant centralised/distributed microprocessor-based control/data acquisition systems, cost comparison 86−12678
power plant components, welded joints, X-ray flaw inspection optimisation components, welded joints, X-ray flaw inspection optimisation 88−70388
power plant performance, book 85−10320
power plant technology, book 85−32962
power plants, educational simulation 86−18917
power station control room information system 86−45183
power supply in rural exchanges 85−5201
power system and power plant design interrelation, standardisation and computer programs *(Croatian)* 87−21834
power utilities radio network, with space diversity *(German)* 85−14112
power/energy 1984 developments review 85−32386
PowerBarge hydroelectric plant 87−72049
powerhouse auxiliary motor failure analysis updated 86−25679
precautionary replacement timing optimisation *(Russian)* 87−35781
predictive maintenance following power plantrehabilitation 87−4555
predictive maintenance for incipient failure detection 87−71954
pressurised fluidised bed combustion boilers, comparison with pulverised coal power plants 88−30586
pressurised fluidised-bed combustion power plant gas filter and turbine designs 87−30381
pressurized fluidised bed combustion in utilities planning 87−9348
preventative maintenance, computerised diagnostic systems 87−57880
preventive maintenance programme optimisation, analysis and engineering approach 87−9231
PRISM, passively safe, economic and testable advanced power reactor 87−71903
private generating plants, the law and the installer *(French)* 87−57962
private generating units, legal and commercial considerations, Italy *(Italian)* 87−51084
problem root-cause identification by logic trees 87−9233
processes, instationary simulation models *(German)* 88−37042
Procontrol P-system with graphical back-documentation for Heilbronn power station *(German)* 87−9341
productivity and reliability information system 88−62160
project control tools for future power plants 87−71956
project documentation, interactive graphic system for circuit diagrams *(Croatian)* 87−22002
protection logic design, using TRUTH-ANALYSIS technique 86−6561
public awareness of nuclear power generation in FRG, opinion poll results *(German)* 85−38606
pulp and paper industry power plants, experience with adjustable speed drives 85−22032
pulp mill and board machine for Duplex packaging board manufacture, power supplies 87−22942
pulse-jet fabric filters for coal-fired utility and industrial boilers, data compilation 88−11073
pulverised coal and fluid-bed furnaces, aerodynamics of firing *(Czech)* 88−5507
pulverised coal fired power plants, coal burn and fireside tests 88−75445
pulverised coal power plants, advanced plant development in USA 85−48861
pulveriser technology, safety and perform. grains 88−37037
pumped storage power plants, flexible switchover and other worldwide trends *(Hungarian)* 85−32384
pumps for nuclear power plant, vibration velocity limits, ASME standards 86−66220
Punjab, India, power develop. 88−48764
purchasing of power plant equipment, cost effective project management 86−110
PWR, French 1400 MWe reactor, requirements characts. 86−70784
PWR, Westinghouse, cold shutdown capability, safety-grade and fire hazards, simulation 87−71911
PWR core management at Electricite de France 86−70779
PWR nucl. plant, training on operator simulators 86−70796
PWR nuclear power plant, self-tuning control appl. 86−51272
PWR nuclear power plant simulation using hybrid computer *(Hungarian)* 86−25704
PWR nuclear power plants, measurement and calculation comparison of radioactive liquid effluents *(Croatian)* 85−38717
PWR nuclear power plants, training facilities, Belgian approach 86−70797
PWR plant-specific availability modelling 87−9286
PWR power plant, phase usage of training simulator 85−54070
PWR power plant, variable power generation to match network requirements *(French)* 85−59956
PWR power plant chemistry control, computer assisted data trending and problem assessment 87−71909
PWR power plant in Arkansas, retrofitting of feedwater heaters 85−48698
PWR power plants in France, radiation protection *(French)* 86−18936
PWR steam generator tube degradation, water chemistry improvement 86−32970
Qatar's solar energy programmes 85−9568
radioactive pollution, relative population exposures from coal-fired and nuclear power plants in India 87−64358
Rankine cycle energy recovery steam generators for combined cycle power plants 85−9695
Rankine cycle power plants, coupled turbine-condenser behaviour 85−53572
Rankine cycles of steam power plants, efficiency improvement using ceramic components 85−48881
rapid processes computerised meas. and recording *(Russian)* 87−22121
recirculating cooling water treatment for scale control 86−33123
recirculating valves, erratic stroking diagnosis and correction, in power plant 86−51436
redundancy management procedure for fault detection and isolation 87−15492
refinery cogeneration facility electrical design, opportunity for industrial power distribution system upgrading 85−16504
refueling outage management project control system 86−33117
refuse pyrolysis for organic waste disposal and power generation at Goldshofe 87−57876
refuse-fired, dioxin emissions, control problems 85−15831
refuse-fired steam and power plants, design modifications 85−21468
regional power stations, power supply reliability improvement *(Russian)* 86−32661
regional spare-parts network expt. 87−30287
regulation of power plants, design of near optimum system 85−48639
relational database approach to design 87−71960

remote multiplexing data communications for power plant computer control 85−43867
remote photovoltaic solar power plants, design optimisation 85−9796
remote redundancy in 6 kV relay protection of electric heating plants *(Russian)* 87−4437
remote supervision 85−65020
remote telecommunication systems, diesel engine generating systems 86−61645
remote water level measurement in power plant boiler drum *(Polish)* 85−21430
renewable electrical energy resources, in developing countries 86−25682
repair and operational servicing of equipment, organisation *(Russian)* 87−35773
research, power plant design and operation, role of science *(German)* 86−51446
residential solar photovoltaic/thermal collectors, for combined electric/thermal energy generation, control aspects 85−60087
residual service life of high temperature power plants components, CEGB assessment approach *(German)* 85−4872
retrofitted control systems to improve power plant operations, microprocessor-based 87−71921
retrofitted economiser tube replacement for coal-fired power plant 86−25877
retrofitting and modernisation of old turbogenerators *(German)* 85−43857
retrofitting of precipitator for no visible emissions with low sulphur coal 87−64380
Reuter West coal-fired heat-power plant in Berlin *(German)* 87−64337
Rio Escondido thermal power plant, temperature meas. for cooling pond model validation 85−60011
River Bend Station Unit-1, nucl. construction project, planning and scheduling 87−71864
river power plant control simulations by ACSL and SIMSTAR 87−35841
Riyadh 8 gas turbine power plant with BBC turbines, initial operating experience 85−43883
Romanian hydroelectric power plants, design of harbour moles *(Rumanian)* 85−53591
Romanian power plant development correl. with cogeneration resource availability *(French)* 86−6451
rotating equipment monitoring, continuous vibration signal anal. 88−11187
Rovinari thermal power plant, lignite enrichment technology *(Rumanian)* 85−53532
RSAS, Reactor Safety Assessment System, situation assessment aid 86−45142
Russian power industry, reduction in costs in fuel, power, labor and material resources in power engineering, measures 85−4710
S emissions, environmental effects *(Finnish)* 87−15517
salient pole type generators in hydroelectric power plants, causes of damage *(German)* 86−19152
Salzach river power plants, construction using KOPF system *(German)* 86−19158
sampled-data control system for power plant computer control, transients modelling 86−12534
Sava River hydro power plants chain; effect of Trbovlje thermal power plant *(Slovenian)* 88−62226
Sayano-Shushenskaya hydroelectric power plant, machine room magnetic fields, expt. study 86−45221
scheduling optimisation for energy generation 88−30434
sea thermal energy, evaluation for CEC *(French)* 86−39622
seawater coolant electrochlorination for increased safety and heat transfer in condenser 87−42669
security system, CCTV camera layout concepts 85−133
seismic analysis of fossil fired power plants 86−33109
selective catalytic reduction of NO_x flue gases from power plants 86−51441
self-contained, feeding industrial distribution networks, thyristor convertors operational charact. *(Russian)* 85−21729
Seminole power plant units 1 and 2, flue gas desulphurisation system 86−33100
service life extension by optimised operation mode and preventive maintenance *(German)* 86−25676
servicing, computer inspection system *(Polish)* 88−11044
SHERPA, human error reduction and prediction, computer-assisted technique 88−11007
simulation, real-time, conservation eqn. appl. 87−71769
simulation model, validation 85−65133
simulation of power plants, conf. Cuernavaca, Morelos, Mexico (Nov. 1984) 85−54041
simulation software to insure the operability of large, newcoal gasification power plants for the 1990s 87−9362
simulator design 87−51781
simulator DIYAC, overview 85−65019
simulator-based study of nuclear plants operators behaviour under abnormal conditions *(French)* 87−64239
simulators for operator training, new generation 85−27138
Skoda steam turbines for power plants, reliability eval. *(German)* 86−25911
SLICE cable information systems for power plant design 87−71953
sliding pressure OTEC plant design 86−33208
slurry and feedwater pumps for power plants, design, maintenance and reliability 85−21282
power plants continued
small combined heat and power installation with microcomputer control 87−9334
small compressed-air energy storage plants 86−51542
small expansion power unit characteristics and selection criteria *(German)* 86−12537
small heat and electricity generating unit, cost effectiveness *(German)* 85−4885
small hydro plants, common design and construction problems 87−57945
small hydropower stations in China, financial anal. 87−57949
small power producing facilities under energy spot pricing policies, optimisation 87−57869
small-scale power generation using homegrown fuel, in developing countries, prospects 85−38806
SMUDPV1-1-MW_{AC} photovoltaic central station power plant, system design features 86−6655
SNPE Bergerac cogeneration plant, using multifuel burners, features and operation 85−21484
socioeconomic impact assessment 85−4714
software development for nuclear power station process information system 87−15461
solar cell arrays of ARCO Solar photovoltaic power plants, tracking optimisation 85−53624
solar central receiver plant, high temperature solar thermal energy absorption withsolid particles 85−60088
solar central receiver power plants, technical and economical aspects 88−5615
solar electric systems, book 85−9562
solar energy systems embedded energy costs 85−48905
solar gas turbine for pump and electric generator drive 87−15596
solar heated cavity receiver of gas turbine plant, dynamic behaviour 87−51109
solar micro-utility system for buildings 85−60086
Solar One, 10 MW solar central receiver pilot plant, operational results 86−39627
solar photovoltaic cell arrays power generation, effects on utility operation 85−60089
solar photovoltaic system optimal sizing 85−48902
solar power plant, feedforward control for distributed parameter model 88−5606
solar power plant, feedforward control of primary circuit 86−33214
solar power plant heliostat field control, optical communication system philosophies 86−51533
solar power plant in geostationary orbit *(French)* 86−6611
solar power plants, feasibility assessment of solar radiation parameters *(Russian)* 85−38931
solar power plants, stand-alone, for remote areas in Libya 85−9804
solar power plants, thermal solar-energy convertors, cylindrical heat receiver 86−19516
solar power plants for developing countries, African pilot installation *(German)* 86−45254
solar power plants with solar collectors with air as heat transfer medium 85−53640
solar thermal central receiver power plant, prefeasibility study 86−39626
solar thermal collector-central receiver system, approximate model for sizing and costing 85−60082
solar thermal electric conversion plants, components 85−9801
Solar Thermal Electric Pilot Plant receiver design validation tests 86−65993
solar thermal electric power plants, using distributed collectors and central receiver systems 85−9802
solar-fuel fired cogeneration plants−sizing andcosting model for molten salt storage systems 85−60080
solar-thermal power plants, heat engine performance and plant efficiency improvement 86−65984
solid fuel, microprocessor-based instrumentation for moisture meas. and flame monitoring 87−35824
solid fuel power plants, intelligent instrumentation 88−5517
solid fuel power plants, new intelligence in instrumentation 87−4573
solid waste management option 85−4897
solid-waste fuelled small power and cogeneration plants, growth 87−22118
solid-waste steam power plant planning, risk management using probability criteria 85−15875
solids handling system design, two-phase flow 88−10932
South Carolina Electric & Gas Company PC installation for improved turbine efficiency 87−71985
Southern California Edison Co. Cool Water plant combined-cycle unit reliability, availability and maintainability audit 86−12656
spontaneous load oscillations on large power systems, anal. 86−32689
squirrel cage vertical-shaft motors for circulating pumps of nuclear power station reactors *(Russian)* 86−39765
stack gas emission from thermal power plants, atmospheric dispersion models 85−15847
staged coal combustion and its application to low cost power plants 87−42658
standards, national and international, for power plants, steam plant example 86−6459
starting conditions of GTE-150 gas turbine power plants 85−4961
static compensation plant, computer aided layout and design, simulation program *(German)* 85−32104
static stability, anal. using catastrophe theory 87−35537
steam condenser reliability improvement 86−25929
steam condenser tube corrosion and fouling 86−56626
steam condensing installation of Kostrom regional power plant, operational testing and control *(Russian)* 87−4540
steam generator chemistry control, intelligent chemistry management system 87−71999
steam generators, supercritical steam parameters, design 88−11064
steam generators, U-tube type for nuclear power plants, model for MMS 85−59914
steam generators in PWR power plants, operating experience 86−33107
steam generators of Super Phenix power plant, acoustic detection of water leakage *(French)* 86−25690
steam generators with integrated fluidised bed combustion for industrial power plant *(German)* 86−70813
steam piping eval. for safer and life extended plants 88−5528
steam piping of Eddystone 1 power plant, failure investigation 86−25901
steam power plant, coal-fired, exergoeconomic anal. and eval. 85−60024
steam power plant high-pressure heaters, intensification of heat transfer *(Russian)* 86−33140

power plants continued
steam power plant thermodynamics, second law anal. at nominal and off-design loads 85−48880
steam power plant units, load variation effects *(German)* 86−70821
steam power plant with recovered gas combustion, digital regulation system *(Italian)* 86−70818
steam power plants, coal-fired, exergoeconomic anal. and eval. 85−60025
steam turbine cycle simulation using MODSIM computer code 88−62189
steam turbine generators, computerised monitoring 86−45194
steam turbines, remanent life calc., advantages and limitations 87−4593
steam turbines for powerstations, development trends *(German)* 86−39529
steam-solar power plant using truncated cones collector, design and layout 86−39628
steel heat exchanger protection by enamel against corrosion and gamma radiation 87−71932
Stirling engines, technology development for rural areas of China 85−48860
stochastic expenditure minimisation for electric power plants *(German)* 86−18906
Stockholm pressurised fluidised bed combustion gas-turbine combined-cycle cogeneration plant retrofit 86−45162
STOK microcomputer based management and monitoring system for power plants *(Swedish)* 88−17234
stress corrosion crack model in laboratory tests 87−15537
subcontrol scheme incompatibility and updating 86−12536
substations and generating plants, IEEE device function number standards 86−51105
Sudan's wind and solar energy programmes 85−9806
sugar factory, cogeneration and interconnection 85−49236
Sulzer 20 MW industrial gas turbine, development design and operation 85−60044
supercritical power plant performance assessment 87−42678
supercritical pulverized coal power plants, EPRI development program 86−33093
supercritical variable-pressure thermal power plant, optimal steam-temp. control of boiler 87−71971
superheater/attemperator system control, real-time simulation 88−55193
supervisory generating station and substation control, IEEE standards 86−56520
supply and demand for electricity generating capacity, Netherlands *(Dutch)* 85−4888
supply network load regulation, AF pulse code control system *(Chinese)* 86−39012
SURBOT, mobile surveillance robot for nuclear power plants 86−25729
surveillance CCTV, high mast lighting for nuclear power plant security 87−22895
Susquehanna steam elect. station, reliability evaluation using GO methodology 88−11100
swimming pool heat and power cogeneration gas engine with exhaust catalytic convertor 86−45163
Swiss electricity statistics on power generation and consumption in 1986 *(French, German)* 87−64036
switching overvoltages across high-voltage house-auxiliarymotors at power plants 86−45333
synchronous for rolling mill power plant, optimum excitation current, comment *(Russian)* 86−39724
synchronous generator protection, out-of-step relay system anal., abbreviated version 85−43950
synchronous generator protection, out-of-step relay system anal. complete version 85−43951
synchronous generator system, convertor fed, for medium and large power plants 86−66055
synchronous machine internal and external stability in multigenerator power plant *(Croatian)* 86−33348
synchronous machines, internal and external stability analysis 87−30541
synthetic fibre factory power plant, turbogenerator frequency control *(Polish)* 86−26454
system planning and policy anal., regional energy facility location models appl. 85−4595
T20 process control system for 2×300 MW thermal power plant 87−78522
TCC-84P motor control center *(Japanese)* 86−70742
technology promotion in Federal Germany, Volklingen power plant example *(German)* 85−4863
technology transfer for Vandellos II Nuclear Project 87−50952
telecommunication centres, rectifier develop. for central power plants (1957-87) 88−30824
telecommunication power plants, appl. of microprocessors 86−61612
telecommunication stations, unmanned, power supply for diesel-electric power plants 85−38877
telecommunications appls. conf., Stockholm, Sweden (June 1987) 88−24342
Texaco gasification-based combined-cycle power plants, lignite feed systems 86−56615
thermal, design criteria for corrosive environments and implications for maintenance 85−21453
thermal, economic aspects, case study 87−71547
thermal, information management system for man-machine systems 87−42640
thermal, low-waste no waste technology appl 85−4895
thermal, optimal preventive maintenance scheduling 88−43030
thermal and hydro plants in energy production systems, deterministic control theory appl. 85−53553
thermal efficiencies forecasting in technology importing countries 86−25881
thermal energy storage, technical and economic criteria *(Russian)* 87−4973
thermal energy storage in connection with cogeneration and district heat 86−65933
thermal fluxes in power plant components, meas. 86−44453
thermal generating unit, coordinated control system design *(Chinese)* 88−48775
thermal hydraulics model, development for full scope power plant simulators 88−17236
thermal IR sensing for diagnostics and control, conf., Cambridge, MA, USA (Sept. 1985) 87−10001
thermal plants, long term model for grid restoration and training simulators *(German)* 86−65910
thermal power plant, 180 MW, modelling and control 85−53284
thermal power plant, 6×220 MW, commissioning and operation, Baiji, Iraq 88−17359
thermal power plant, automatic computation algorithm for cable bundle determ. *(Rumanian)* 87−30350
power plants continued
thermal power plant, lignite fuelled boilers, automatic thermal load regulation 88−62137
thermal power plant automated switch room design *(Rumanian)* 86−33060
thermal power plant automatic monitoring installations, operational reliability estimations *(French)* 87−50977
thermal power plant auxiliaries networks with neutral grounding system 87−50978
thermal power plant boiler manufacture, worldwide developments *(Croatian)* 85−38812
thermal power plant cable bundles determ. by automatic computation algorithm 87−50981
thermal power plant combustion fume desulphurisation 87−4568
thermal power plant control, simulation study *(Chinese)* 88−48774
thermal power plant control, tripping to houseload system 86−51452
thermal power plant controller, computer aided optimal control method and design *(Japanese)* 86−33074
thermal power plant electric power production costing by Kapas 6 model 85−53538
thermal power plant equipment replacement and reconstruction 87−22111
thermal power plant logic model for productivity, reliability, availability and maintainability 87−9363
thermal power plant maintenance system with state dependence *(Hungarian)* 86−39526
thermal power plant oriented distributed control system 87−42641
thermal power plant preventive maintenance technology 86−39535
thermal power plant residual life analysis 87−50992
thermal power plant spares requirement optimisation *(French)* 87−50980
thermal power plant steady-state power under-utilisation anal. *(Russian)* 86−51429
thermal power plants, chemical regeneration of heat for improved efficiency 87−22117
thermal power plants, computer aided planning of annual scheduled maintenance *(German)* 87−50985
thermal power plants, computerised supervisory control system *(Chinese)* 88−30529
thermal power plants, control in relation to power system freq. control *(Croatian)* 88−5515
thermal power plants, control systems and electrical equipment 88−5524
thermal power plants, control using distributed microprocessor system 86−33133
thermal power plants, controllers and communication networks 87−42642
thermal power plants, electricity only generation and cogeneration from Brown Boveri 87−42629
thermal power plants, energy input optimisation *(German)* 86−39525
thermal power plants, exhaust gas diffusion into atmosphere, statistical data anal. *(Japanese)* 86−33076
thermal power plants, finite element modelling of axisymmetric thermal fields, TERMAX software appl. *(Romanian)* 88−11042
thermal power plants, flotation purification of waste water petroleum products *(Russian)* 86−25859
thermal power plants, fuel cell waste heat appl. *(Japanese)* 86−33075
thermal power plants, N compound processing of desulphurised waste water *(Japanese)* 86−12653
thermal power plants, operating reliability, water steam quality maintenance *(Croatian)* 88−75412
thermal power plants, optimal regulator design and system identification 86−12666
thermal power plants, principles of wear protection *(Russian)* 86−33054
thermal power plants, specific costs for power generation, Yugoslavia *(Croatian)* 88−17348
thermal power plants, training simulators development *(Italian)* 88−30571
thermal power plants, use of dissociating gases as working fluids 86−33132
thermal power plants, wastewater treatment and utilisation problems 85−4899
thermal power plants, water supply considerations *(Rumanian)* 85−53531
thermal power plants by ELIN, rating up to 330 MW *(German)* 88−11040
thermal power stations in developing countries, availability and reliability *(Polish)* 88−17346
thermal unit, optimal dynamic dispatch owing to spinning-reserve andpower-rate limits 86−33070
thermal unit, optimal static dispatch, effect on fuel costs 86−33071
thermal-electric power plant, OP230 boiler pulveriser unit, sequential control system *(Polish)* 86−19067
thermionic cogeneration burner assessment 85−53645
thermionic cogeneration burner module, design and construction 85−53932
thermionic convertors with oxide collectors, characts. 85−53854
thermoelectric power generation from low-grade heat sources *(Japanese)* 85−16269
thermoelectric power plant burner control modernisation using PLC 87−64348
three-generator plant, operational behaviour, Boolean function technique 87−9068
three-generator plant, reliability and mean-time-to-failure anal., Boolean function technique 87−9069
THTR-300, operating experiences *(German)* 87−35760
tidal power plants, bulb unit design 86−65978
tidal power plants, optimal design, alternative criteria effects 86−25953
toxic emissions from fossil fuel power plants, risk assessment 88−11071
training and education of nuclear power plant staff *(German)* 85−48673
training and simulators 86−52176
training of operators to start-up and shut-down generators using flowcharts 85−27988
training of personnel using microcomputer simulation 85−54066
training simulator, condensing tandem compound type steam turbine simulation 86−19087
training simulator design for large dynamic systems, marine steam power plant appl. 88−30579
training simulator fidelity 87−78394
training simulator of plant operation for Tarong power station 87−36383
transformer maintenance and workshop practices for power plants and systems *(Russian)* 86−61545
transients anal. of nuclear, steam and hydroelectric plants *(Rumanian)* 86−56536
transportable fuel cell power plant 85−65364
treble Rankine cycle efficiency in cascaded potassium/diphenyl/steam turbine plant 86−33080
TRIGA power reactors for district heating 85−43814
trimburner system for combined-cycle, wood-fired power plant gas turbine 88−62212

power plants continued

Monticello nuclear power plant feedwater control, fault-tolerant digital system *(Japanese)* 87−78334
MSHIM control system for nuclear power plant load-follow operation 88−42985
multi-unit gas/steam combined cycle power plant, group load control 86−45174
NOVATUNE adaptive controller, 660 MW power plant simulation appl. 86−70817
nuclear fuel handling system, computer-controlled 85−32304
nuclear plant CAD construction control system appl. *(Japanese)* 88−10974
nuclear plant field test systems, architecture of computerised monitoring, testing and maintenance *(French)* 88−30457
nuclear plants, knowledge bases 87−57565
nuclear power generation control computer system fault defence mechanisms 86−45074
nuclear power plant, digital control system, NURECS-3000 *(Japanese)* 86−39304
nuclear power plant, simulation technique *(Japanese)* 85−9581
nuclear power plant, supervisory, monitoring, control and electrical systems for PWR's 88−5469
nuclear power plant computer control system, operating experience 86−70762
nuclear power plant computer replacement/upgrade project, software and user interface considerations 86−12600
nuclear power plant control and monitoring using FIELDBUS concept, NERVIA network presentation *(French)* 88−30458
nuclear power plant control room, semigraphic intelligent terminal colour display *(Czech)* 88−23606
nuclear power plant control room with computer generated displays 85−15746
nuclear power plant control rooms, IEC design standard 86−45095
nuclear power plant control using AI-based expert systems 88−75271
nuclear power plant control using knowledge based expert system *(German)* 88−55136
nuclear power plant disturbance analysis using artificial intelligence, SAAP-2 system 87−15478
nuclear power plant instrumentation and control systems, user interface improvements *(Japanese)* 88−30450
nuclear power plant operators training, Loviisa training simulator 87−15468
nuclear power plant reliability and availability enhancement, generic software package 87−9278
nuclear power plant reliability improvement using maintenance centered expert systems 88−55130
nuclear power plant safety surveillance, online plant analyser for control room utilisation 85−59918
nuclear power plant safety system status monitoring for operation and maintenance 86−25735
nuclear power plant water cooled VVER 1000 reactor, automatic parameter control system *(Russian)* 86−65870
nuclear power plants, Experimental Breeder Reactor-II proof testing, safety enhancement 86−25833
nuclear power plants, fuel element positioner 86−12637
nuclear power plants, user interfaces, supervisory control *(Japanese)* 88−69108
nuclear power station, computerised diagnostics of 440 and 1000 MW primary circuits *(Czech)* 87−15427
nuclear power station computer system VDU displays 86−45096
nuclear power station control, arguments in favour 86−18938
nuclear power station control system personnel, information supply improvement *(Russian)* 86−61216
nuclear power station monitoring and control 86−18937
nuclear power station Operator Advisor expert system *(French Dutch)* 87−50941
nuclear power station steam generator feeds, automatic regulation, experimental checks *(Russian)* 86−61217
nuclear power station steam generators, automatic control system adjustment *(Russian)* 86−32941
nuclear power station steam turbine automated control *(Russian)* 87−22020
nuclear power station supervisory control centre, information retrieval system *(Russian)* 86−32934
nuclear power stations, control room simulator for training purposes 88−75345
nuclear power stations, safety checking 88−11018
power station computer control continued
nuclear reactor display systems upgrading 87−15471
online computer systems for power stations, architectural develops. 88−30456
online monitoring for predictive maintenance of hydro power plants 88−43087
online power plant performance monitoring system for reliability and availability improvement 87−9390
Ontario Hydro nuclear plants control, computer usage 88−48744
operating procedures, design and presentation 86−45048
operator and technical means of control interaction eval. for power station control systems 88−55133
operator friendly man-machine system for computerizedpower plant automation 86−12540
optical links for bidirectional signal transmission between power plant minicomputers *(German)* 85−3442
Ornskoldsvik T100 power station, power network control using fibre optical cables *(Swedish)* 88−17344
Paluel 1 and 2 PWR power plants, commissioning of CONTROBLOC and SPIN automatic systems *(French)* 86−61229
particle accelerator control, mechanical system synchronisation *(Russian)* 85−65048
peat-fired power station, flexible control system *(Dutch)* 88−30274
performance monitoring using microcomputers 88−11075
PFR steam drum level control system, multivariable control system anal. 86−65875
photovoltaic power station computer control, Cork 86−51532
Pickering A, operator-machine interface upgrade, annunciation system 88−48684
plant automation, microprocessor appl. 87−71959
plant instrumentation, fibre optics appl. 88−60610
plant operation using computerised procedures 87−71947
plant operations improvement using PLCs 88−55102
plant performance optimisation by microcomputer 86−12535
plant subcontrol scheme incompatibility and updating 86−12536
power overflow control along transmission lines, frequency and active power control *(Russian)* 88−17233
power plant computer control, theoretical study *(Chinese)* 85−15463
power plants, remote supervision 85−65020
power station operator communication and monitoring subsystem withintegrated alarm processing 86−56604
power-generating boiler, discrete automatic control of efficiency and ecological performance 87−71928
PRAUT, process computer systems aid decisions in power plant control and monitoring, Brown Boveri 85−15694
PRAUT for higher-order power control and optimization in the combined cycle power plant Tung Hsiao 85−15855
PRECICONTROL automated process control system for electrostatic precipitators 86−25916
predictor displays for complex, dynamic tasks: a preliminary investigation 87−22056
prevention and control of nuclear power plant accidents 88−48696
process control system for power stations *(German)* 86−45154
PROCONTROL P, Brown Boveri's control and monitoring systems for power plants, appl. concepts 85−15693
PROCONTROL P digital distributed control and monitoring systems for power plants, Brown Boveri 85−15692
PROCONTROL P electronic systems for power plant control and monitoring, Brown Boveri 85−15691
PROCONTROL P electronic systems for turbine and boiler protection 85−15853
PROCONTROL P for the Mellach district heating plant in Austria, Brown Boveri system 85−15856
PROCONTROL P power plant control system *(Hungarian)* 87−64215
PROCONTROL P process bus system used for signal transmission in power plants 85−15695
Procontrol P-system with graphical back-documentation for Heilbronn power station *(German)* 87−9341
productivity and reliability information system 88−62160
programmable control system PC-4k for pumped-storage power station Zarnowiec *(Polish)* 85−5007
Promaster computerised process control for nuclear power plants 87−71819
PROTROL, digital protection and control system from AECL 88−55120
pulverised fuel fired steam power stations, computerised combustion monitoring 88−75472
pump turbine performance characteristics, numerical representation 88−5599
pumped storage power station at Leitzach, control and operation 87−15594
pumped-storage plant optimal weekly operating schedule program *(Korean)* 86−12736
pumped-storage power station control system security *(Slovak)* 87−30428
pumped-storage power station digital control system for regulation and protection 88−75518
PWR, computerised advanced control board 86−70795
PWR boron conc. control by real-time expert system PMS-2 87−50966
PWR design of 1400 MW, computerised control and monitoring system 86−70794
PWR nuclear power stations, MC-PWR digital anal. package for control appl. 88−75347
PWR power plant, suboptimal control using approx. model following method 88−36935
PWR power plants, modular system for transient response prediction 86−12602
PWRs, Japanese annunciator system for control room, accident conditions 87−78319
PWRs, Paluel, 1300 MWe, external core meas. *(French)* 87−50936
qualification concepts for instrumentation and control systems of nuclear power plants 87−15496
Rabenstein hydroelectric power station control and monitoring by double computer system *(German)* 88−23781
RBMK-1000 power reactor, computer program for dynamic conditions calc. *(Russian)* 86−61250
RBMK-1000 reactor, operator training simulator, software development *(Russian)* 87−71876
real power generation control systems in elec. eng. *(Korean)* 88−23750
real-time digital simulator for testing a steam power plantcontrol system 86−6586
real-time distributed digital control systems, network access protocols 87−40415
Reid Gardner Station control system replacement 88−69084

power station computer control continued
REKO-T, multi-centre energy management system for hydroelectric power stations 88−17403
reliability assessment of power station computer control system *(Russian)* 85−27273
reliability increase *(Czech)* 85−59975
reliable automation, design principle and background practices 86−6463
remote multiplexing data communications for power plant computer control 85−43867
retrofitted control systems to improve power plant operations, microprocessor-based 87−71921
reversible pump-storage hydroelectric power plant, process information system *(Croatian)* 88−43094
Riedersbach II power station building layout and computerised operation *(German)* 87−78493
Riedersbach mixed fuel power station steam turbine plant, condensers, cooling and control *(German)* 87−78491
Rifaa II gas turbine power station, project engng., construction and commissioning 86−51477
river power plant, digital simulations on SIMSTAR and with ACSL 88−17424
Riyadh 8 gas-turbine power station supervisory control and data acquisition system 86−19126
Robinson NPP, digital implementation of ATWS mitigation system actuation circuitry 88−43012
run-of-river power station chain automation 87−9409
run-of-the-river power plant chain operation management by computer *(Croatian)* 88−23775
safety and diagnostic system design for microcomputer-based power station automation *(German)* 87−50993
Salto Grande hydro power plant, control system, South America 87−42692
sampled-data control system for power plant computer control, transients modelling 86−12534
Sayano-Shushenskoe hydroelectric station automatic water expulsion control 88−30601
SEMAC, microprocessor system for remote monitoring and control of engine generators 85−65162
Shearon Harris NPP, digital implementation of ATWS mitigation system actuation circuitry 88−43012
Siemens microprocessor-based station control system for new andexisting switchgear 86−12987
SIMATIC S5 programmable controller system for standby diesel generating plant 87−15570
simulation, model reduction and stable controller design 88−17425
simulation software to insure the operability of large, newcoal gasification power plants for the 1990s 87−9362
small combined heat and power installation with microcomputer control 87−9334
small hydropower plant operation, centralised and decentralised control *(Romanian)* 88−11117
small thermal power station automation, Audatec system *(German)* 85−60031
soft simulator for fossil-plant operator training 88−37022
software development and production effort *(German)* 86−44862
solar power plant, distributed collectors field automation 88−48822
solar power plant heliostat field control, optical communication system philosophies 86−51533
solar power station, computerised control and exptl. results *(Russian)* 87−78558
solar power station CAD, heliostat array control system optimisation 86−19160
solid fuel power plants, new intelligence in instrumentation 87−4573
Spanish nuclear power stations, computer-assisted operation and maintenance management system 87−15455
spare hardware components for automated process control systems in electric power station *(Russian)* 85−21280
St. Lucie NPP, on-line digital feedwater control system for plant trip minimisation 88−62110
stabiliser, microprocessor based for pumped-storage power station 86−51515
steam power plant desktop computer applications and software 86−33149
steam power plant life extension by control modernisation 86−51461
steam power station, integrated turbine/load-dispatch control, design, implementation 86−12677
steam power station monitoring system for boilers and heat exchangers 88−75455
steam power stations, computerised control using AI systems for optimal boiler perform. 88−43050
steam power stations, instrumentation and control system study 88−75460
steam turbine control system at Tiszapalkonya power station, Hungary 87−57917
steam turbine K-800-240-5, automated control system *(Russian)* 86−39564
steam turbine thermal control computer *(German)* 86−19117
STOK microcomputer based management and monitoring system for power plants *(Swedish)* 88−17234
Studstrup (Denmark) steam power station commissioning and operating experience *(German)* 86−51467
substation reactive power compensator, automatic computer control *(Chinese)* 85−9558
Super Phenix fast breeder plant, emergency systems training simulators 87−42626
supervision system and man-machine interface design in nuclear power station *(Italian)* 88−30506
T20 process control system for 2×300 MW thermal power plant 87−78522
Talkha (Egypt) power station conversion to combined-cycle operation 87−64435
TCC-84P motor control center *(Japanese)* 86−70742
telecontrol via satellite 88−66931
TELEPERM M power station control system computer aided calc. of bus load 85−59994
TELEPERM ME power station forced-draught fan control subsystem 86−25880
Teleperm-M control system with OS254 E screen operation and monitoring *(German)* 87−15405
Temex system for telemetering at power stations *(German)* 86−56579
testing strategies and testing environment for reactor safety system software 87−15495
thermal, control rooms 85−15804
thermal, with equipment malfunctions, sequential start/stop control *(Japanese)* 85−38824
power station computer control continued
thermal and nuclear power station control systems and instrumentation *(Spanish)* 85−48826
Thermal Information Program (TIP) for coal fired electric power plant operator guidance 87−35808
thermal plants, information management system for man-machine systems 87−42640
thermal power plant, fault location 88−17372
thermal power plant automated switch room design *(Rumanian)* 86−33060
thermal power plant automatic control limitations and optimisation *(Croatian)* 87−42638
thermal power plant automation for computer control *(Chinese)* 86−25847
thermal power plant control, simulation study *(Chinese)* 88−48774
thermal power plant oriented distributed control system 87−42641
thermal power plants, computerised supervisory control system *(Chinese)* 88−30529
thermal power plants, control using distributed microprocessor system 86−33133
thermal power plants, controllers and communication networks 87−42642
thermal power station, math. model of steam production for control system design *(Croatian)* 88−62145
thermal power station fuel consumption monitoring, effect of meas. errors *(Russian)* 86−39541
thermal power stations, automation evolution *(Italian)* 88−30570
thermal-power processes regulation, high-quality systems design *(Russian)* 86−6564
Torness AGR, data processing and auto-control software 88−55119
TOSPHICS, thermal power plant hierarchical integrated digital control system 85−21472
total power plant performance monitoring system results 87−64425
touch sensitive video monitor for power station computer control 86−45047
touch-screen control displays, performance and appl. 86−60149
training and simulators 86−52176
training simulator for Heysham 2 nuclear power station 87−15467
training simulators, PC based 88−75254
training simulators for operating personnel in thermal power station control rooms 85−15806
Trangslet hydroelectric power station computer control, Asea Generation HPC300 *(Swedish)* 87−72020
turbine, digital control system in Northern Territory, Australia *(Japanese)* 87−78228

power plant operation, command documenting systems future development goals *(German)* 85−32260
power plant simulation model, validation 85−65133
power system dynamic behaviour, influence of turbine control *(German)* 85−15491
predictive control system, advanced, for thermal power plant with large load fluctuations *(Japanese)* 87−78507
private generating stations modernisation in Italy *(Italian)* 87−57941
protection logic design, using TRUTH-ANALYSIS technique 86−6561
pumped storage power station at Markersbach, electrical equipment and power system operation *(German)* 85−32385
pumped-storage power station electrical equipment complexity and automation *(Russian)* 86−39614
PWR nuclear power plant, self-tuning control appl. 86−51272
PWR nuclear power plant simulation using hybrid computer *(Hungarian)* 86−25704
quick-acting valves for nuclear power stations 88−36926
refuse incineration plant for power generation, remote process control *(German)* 87−64405
regulation of power plants, design of near optimum system 85−48639
remote control system for Zamosc power station, operational experience *(Polish)* 85−21429
remote power plants, control strategy for transient stability improvement 88−69086
Revelstoke hydroelectric power station, control and protection design 85−60055
self-tuning for power-station control loops, current state of development 87−4585
sequential control systems appl., fault tree synthesis *(Japanese)* 86−52305
simulation of power plants, conf. Cuernavaca, Morelos, Mexico (Nov. 1984) 85−54041
Skoda control element drives for VVER 440 power reactors 86−51262
SKODA steam turbines automation, far thermal and nuclear power plants *(Czech)* 85−60018
solar power plant, feedforward control for distributed parameter model 88−5606
solar power plant, feedforward control of primary circuit 86−33214
solar power station adaptive control system at Almeria *(Spanish)* 85−48897
solar power stations, automatic heliostat control systems 85−48891
solar thermal repowering system dynamic capability during partial and full cloud cover transients 86−33213
solar-boilers large disturbances effects, control of systems subject 85−5396
solid fuel power plants, intelligent instrumentation 88−5517
space power systems static state estimation, algorithm and real time control appl. 86−60908
spillway gate and outlet automatic controls 86−45231
stability and control of power stations with different generator types *(Russian)* 87−4468
power station control continued
steam and temperature control in power stations *(German)* 87−57896
steam condensing installation of Kostrom regional power plant, operational testing and control *(Russian)* 87−4540
steam power plant, automatic regulation analysis and synthesis by computer *(Russian)* 85−15868
steam power plant upgrading and controls for pulp mills 85−5590
steam power plant with recovered gas combustion, digital regulation system *(Italian)* 86−70818
steam power station feedpump drive controls for cycling boilers 88−75462
steam power stations, fluidised bed boiler modelling for control appls. 88−75473
steam power stations, variable/constant pressure operation and control *(German)* 85−9701
steam turbine deaerator-free cycle system development and operation 88−11091
steam turbine power stations, optimal distribution of electric and thermal charges 86−56624
stepping control system for constant head water level in hydroelectric power stations *(Polish)* 86−25947
substations and power station interference voltage problems in control equipment 86−48619
Superconducting Magnet Energy Storage for power system stabilizing control 87−30084
supercritical once-through boiler unit adaptation to utility generation management plans 85−65132
supercritical once-through steam generators, optimal control 86−12665
supercritical variable-pressure thermal power plant, optimal steam-temp. control of boiler 87−71971
superheater steam temp. control, in 200 MW power plant *(Czech)* 86−45184
supervisory generating station and substation control, IEEE standards 86−56520
telecommunication stations, unmanned, power supply for diesel-electric power plants 85−38877
thermal, operating reliability of automation devices *(Russian)* 85−21441
thermal power generation plant optimal control approximation under rapidly-changing load 85−38826
thermal power plant, 180 MW, modelling and control 85−53284
thermal power plant control, tripping to houseload system 86−51452
thermal power plant control systems and equipment in less industrialised countries 85−65130
thermal power plant DDC systems 88−17334
thermal power plant distributed control system architecture 88−17333
thermal power plant man-machine interface design 85−48868
thermal power plants, control in relation to power system freq. control *(Croatian)* 88−5515
thermal power plants, control systems and electrical equipment 88−5524
thermal power plants, optimal regulator design and system identification 86−12666
thermal process simulation, math. model *(German)* 85−9683
thermal-electric power plant, OP230 boiler pulveriser unit, sequential control system *(Polish)* 86−19067
thyristor control of auxiliary equipment *(Polish)* 86−45043
TMI nuclear reactor accident, role of management communication 86−51203
turbine electrohydraulic control system at nuclear power plant, reliability assessment 87−71834
turbine high-speed valve control, stability under sustained first valving *(Japanese)* 86−51464
two generating stations, dynamic equivalent using parameters estimation algorithm 85−64849
two-circuit automatic control system for power plants, reconstruction *(Russian)* 86−32879
Uglegorsk power plant, turbo drive control systems, feed pumps and air blast units *(Russian)* 86−25860
ultrasonic flowmeter for power station boiler *(Japanese)* 87−41314
unknown-but-bounded disturbance effect minimisation in power plants 88−43045
utility generating plant life extension programmes, instrumentation and control aspects 87−78230
utility plant header control and optimization 86−6585
VAr control for multiunit generating station power losses minimisation 87−78473
VVER 440 reactor unit control and safety protection system *(Hungarian)* 87−50959
West German fossil-fuel power plant technology changes *(German)* 86−56611
wind power generation effects on power systems, control and unit commitment 85−60101
wind-photovoltaic power plants for battery charging, controls 87−22191
Zaporozh state regional power station, control, steam distribution and protection systems improvement *(Russian)* 86−33043
H_3PO_4 fuel cell power plant control and instrumentation systems 87−64791
SF_6 switchgear performance in power station auxiliary control 87−78827

power station load
25 MW Aniwhenua hydroelectric power station; computer based supervisory control system 86−56659
250 MW pumped storage units of Wivenhoe power station, excitation control system 86−45250
600 MW wash-tailing combustion steam turbine unit *(German)* 86−6573
750 MW bituminous coal power station at Bexbach, construction and operation *(German)* 85−60003
2000 MW HVDC Cross Channel Link, static compensators installation 86−12390
active power flow limitation, automatic nonlinear system input extrapolation criteria *(Russian)* 86−56341
auxiliary load acceptability evaluation methods 87−78221
boiler steam temperature control, microprocessor-based method 85−9708
coal-fired generating unit minimum load capability improvement 87−64424
computer system, KSWDB type, for load dispatching, economic effectiveness *(Polish)* 86−18913
control system using centralised methods for priority disconnection *(German)* 88−42916
cost effective modular design for high density loads 88−24098
direct load control, electric utility experiences/assessments and system characts. 85−64824
distribution systems, integrated data acquisition and information processing for load anal. 87−4376

power station load continued
district heating power stations, load distrib. between power units *(Russian)* 87−57873
district heating steam power plant, loading and controlling, analysis *(Russian)* 85−4914
electrohydraulic control system with feedback for 215 MW power unit control *(Polish)* 86−19060
fossil-fuelled power plant cycling problems and possible solns. 85−53547
gas turbine cogeneration plant, thermodynamic performance and partial load operation, computer aided analysis 85−4966
grid load forecasting, time series anal. adaptive model appl. *(Chinese)* 85−9457
hydro-thermal power system, decentralised suboptimal load-frequency control using state variable model 85−43531
hydroelectric power plants, load controlled energy generation *(German)* 86−19147
hydroelectric power stations, power increases at peak loads *(Russian)* 86−25941
hydrothermal, fixed-head, optimal load flow problem 87−21867
hydrothermal coordination problem solution using the continuation method 87−4317
HYSS, Pacific Gas and Electricity's hydroelectric system scheduling package 86−45233
large power stations auxiliary service networks neutral grounding 85−59817
Littlebrook D and Grain power station operation 86−56622
locally isolated metropolitan power system, supercond. mag. inverter/convertor unit 87−30083
loss of load probability evaluation, real-time emergency dispatch based 85−43517
micro-hydroelectric power station generator with self-ballast load, equivalent load *(Russian)* 88−69188
microprocessor-aided telequipment with regional loads summation *(Chinese)* 85−7994
nuclear power station with single loop, saturated steam characts. over variable part of load curve *(Russian)* 87−15475
nuclear power stations, continuous load *(French)* 87−9267
nuclear power stations and thermal power stations generating units, loading rates comparison 85−4562
parameter identification of load frequency control system 86−39017
power plant auxiliary load reduction and fuel saving with adjustable-speed drives 87−30387
power system generation schedule optimisation using modified coordination equations 86−61051
power systems, automatic energy management with generator scheduling and medium term planning 87−4315
power systems, operational planning, thermal unit commitment, fundamental concepts and asemi-rigorous solution method 87−4314
PRAUT for higher-order power control and optimization in the combined cycle power plant Tung Hsiao 85−15855
protection for emergency power limiting of power stations with 300 MW units *(Russian)* 86−25672
PWR power station load variations and their chemical effects *(German)* 86−45071
Superconducting Magnet Energy Storage for power system stabilizing control 87−30084
supercritical pressure boilers with pressure reducing valves, for base load unit operation flexibility 85−38852
thermal, optimal load distribution, math. model 85−21428
thermal generating set commitment/scheduling optimisation using dynamic programming *(Chinese)* 85−43873
thermal power station load distrib. operation with cross-linking, multi-purpose programme *(Russian)* 88−30534
thermoelectric power station, model and algorithm for optimised management *(Bulgarian)* 85−15835
transmission system performance methods, probabilistic transfer capability 85−64865
turbine throttle, steam preheating and burner regulation methods for load increase *(German)* 85−60004
unit commitment using composite thermal generator operating cast function 87−4316

Belchatow Power Station, Poland, regional atmospheric air protection *(Polish)* 86−39528
biofouling by microorganisms, treatment using Cl-Br biodispersant mixture 86−32899
biofouling control using targeted chlorination for improved heat transfer 88−62172
bituminous coal fired power plants, 'Cold End' design, economics and heat requirements *(German)* 85−43856
bituminous coal-fired slag tap furnace at Aschaffenburg power station, NO_x reduction *(German)* 87−15518
bituminous coal-fired unit design and licensing requirements at Altbach/Deizisau power station *(German)* 87−64360
block heat and power plants in BRD, overview *(German)* 86−33059
block operating economy and production price model 86−32889
boiler combustion control, model reference adaptive algorithm 86−25883
boiler drum water-level indication *(Chinese)* 86−56575
boiler feed pumps, converter-fed synchronous motor as high speed drive 86−66372
boiler implosion control in fossil fuel power plants 86−25882
boiler water treatment, isoascorbic acid for oxygen scavenging 86−33124
boilers, assessment of limiting thermal conditions for furnace-wall tubes 85−43861
boilers, water circulation, correctness control by temp. meas. method *(Polish)* 88−75418
boilers with chemical demineralisation plant, effect of raw water quality 85−48842
Brayton Point power station, failure anal. of C steel tubed feedwater heaters 86−56599
Brown Boveri's power station service department to aid plant management 86−18902
brown coal fired power plant, clean air arrangements *(German)* 88−48785
Buer district heating power station steam turbogenerator, regulator *(French)* 88−62207
Buschhaus power station, W. Germany, problems of low-grade lignite combustion *(German)* 88−62183
cable design and installation in nuclear and nonnuclear power stations, IEEE standard 87−21965
cable fire protection and prevention 86−51451
cable flame propagation resistance 87−15287
cable inflammability standards revision *(Italian)* 86−44984
cables thermal stability tests at voltages up to 1 kV *(Russian)* 87−42471
capacitive-storage power station, charging-discharge convertor with capacitive store system, emergency power supply 87−64830
Cape Town power system computer-based control centre and energy management system 88−23323
cathodically protected system on-line corrosion monitoring in power station 88−75249
CEGB power station effects on aquatic life 85−43665
chimney exhaust stocks, use of silicone concrete *(Russian)* 87−4546
circulating fluidised bed boiler retrofit at Nucla station 88−37023
circulating fluidised bed combustion operation in power stations *(German)* 87−15524
clarifying plant with computerised dispensing of clarifying agent *(Russian)* 86−45150
Claus power station, dynamic behaviour of turbogenerators and grid, joint study *(Dutch)* 85−53527
Claus power station, turbogenerator and power system interaction and noise measurement *(German)* 85−53528
closed Brayton cycle waste fuel power cogenerationsystem 86−33130
coal, enrichment and effects on national economy *(Russian)* 86−25680
coal, hammer mill pulveriser efficiency improvement *(Russian)* 86−39269
coal combustion for emission control and pollution control 87−4553
coal combustion study for cost optimisation purposes 88−75450
coal fired power station, plant for NO_x reduction 87−4534
coal fired power station at Cool Water using integrated gasification combined cycle technology *(Chinese)* 87−4536
coal fired power stations, ash removal plants and pneumatic waste product conveyors *(German)* 85−21424
coal fired power stations, control of NO_x emissions 85−32334
coal fired power stations, pollution emission reduction in FRG *(German)* 86−6554
coal fired power stations, SO_2 and NO_x removal from combustion products *(German)* 86−19058
coal fired power stations in Queensland, Australia, ash handling 87−9354
coal fired power stations using gas-solid fluidised combustion process 88−11047
coal flow stoppages due to foreign objects and wet coal plugging 87−15534
coal for power utilities, real-time anal. to improve efficiency 86−18919
coal gasification combined cycle power plant, Cool Water 86−56603
coal gasification power stations, methan prod. using liquid-phase mass transfer 88−75442
coal preparation, metal recovery system *(Russian)* 86−39270
coal quality effect on cost of power generation 87−71550
coal quality for thermal power station, effects on USSR national economy *(Russian)* 87−15410
coal reserve assessment and effects on coal consumption in Australia 87−9246
coal-burning thermal power plants, electrical dust collection characts. *(Japanese)* 86−51439
coal-fired, operation, maintenance, refurbishment 88−48765
coal-fired, SO_2 emission reduction, cost minimisation model 86−45161
coal-fired once-through type boiler and power station training simulator 87−71966
coal-fired power plant dust suppression and collection 88−75428
coal-fired power plant occupational health risk model, input-output analysis 86−12662
coal-fired power plants, atmospheric pollution caused by metal and halogen elements, SO_x and NO_x *(Dutch)* 87−22101
power stations continued
coal-fired power plants, operating efficiency improvements *(German)* 88−43042
coal-fired power station, clean coal recovery from anthracite culm 88−37046
coal-fired power station, hybrid cooling towers, design and operation. *(German)* 87−51014
coal-fired power station boilers, utilisation of flame monitoring device *(German)* 87−9358
coal-fired power station flue gases, selective catalytic reduction for denitrogenization *(German)* 85−43865
coal-fired power station for industrial heating *(German)* 85−48833
coal-fired power stations, fire/explosion hazard prevention 88−43038
coal-fired power stations, polycyclic aromatic hydrocarbons emissions, Netherlands 88−5521
coal-fired power stations, pulverisation techniques *(Chinese)* 87−4537
coal-fired power stations in India, radiation exposures 87−21700
coal-fired power stations with turnkey flue-gas desulphurization plants 87−15497
coal-fired utility boilers, retrofit NOx controls, overview 86−25899
cogeneration, combined gas/steam cycle characts. 86−65911
cogeneration, development and effects on consumers 86−70810
cogeneration and small renewable resources power production, effects of PURPA 86−6460
cogeneration and the environment at Mellach district heat thermal power station *(German)* 86−65915
cogeneration energy supply system, a case study at Princeton University 86−12647
cogeneration for East German industrial plants, potentials, limits and economics *(German)* 86−33064
cogeneration for industrial and mixed use parks, identification and eval. method 86−61328
cogeneration of electricity and district heat, fuel savings calc. *(Slovak)* 86−45155
cogeneration of heat and power, decentralisation in Germany, technical-economic study *(German)* 86−19057
cogeneration of heat and power, power plant conversion in Czechoslovakia *(German)* 86−25865
cogeneration of power and district heat, development in Hameln *(German)* 86−65917
cogeneration plant at Kaweczyn, operation, economics and maintenance *(Polish)* 86−25864
cogeneration plant for Diamond Shamrock Chemicals Corporation 86−71162
cogeneration plants, air interchange characts. *(Russian)* 87−4545
cogeneration plants, frequency and pressure regulator 86−70802
cogeneration power plant, modular, with heat pumps, for conserving energy, operation mode *(German)* 85−4881
cogeneration power plants, double-flow heat exchanger for temperature condition improvement *(Russian)* 86−65906
cogeneration power station operation, ash dump hydraulic dredge effects *(Russian)* 86−65908
cogeneration power station thermal systems, research method *(Polish)* 86−45156
cogeneration project design, costing and economic optimisation program 85−53377
cogeneration system for industry, electrical system arrangement 86−39559
cogeneration turbines incorporating adjustable guide disc *(German)* 86−33067
combined cycle power plants, BBC's KA 8 and KA 13E series 85−32335
combined cycle power plants, selective catalytic reduction for NO_x emissions 86−61338
combined cycle power stations, thermodynamic and technological foundation of gas-steam cycle 87−4569
combined heat and power plant based on refuse gas, operating experience *(German)* 86−19051
combustion/firing monitoring by photoradiometry and photothermography, application to power station monitoring *(German)* 85−38810
components and machines, NDT methods *(German)* 88−69144
compressed air generator for driving gas turbine during peak demand *(Polish)* 88−75955
computer aided anal. for power station optimisation *(German)* 85−43667
computer based collation and evaluation of analytical data *(German)* 86−51448
computer program for power station information and planning *(German)* 85−21277
computer-aided layout of power cables *(German)* 85−4638
condensation turbogenerators, initial steam pressure change effects on efficiency *(Russian)* 86−33046
condenser/circulating water system configuration for efficiency improvement 86−25905
condensers, leak tightness check simplification 87−30375
condensers in nuclear and thermal power stations, operating condition anal. *(French)* 86−6481
condensing flue-gas wet scrubbers for power station air cleanup 88−75237
condensing section, optimal design and development system 85−48710
condition monitoring of power generation process for maintenance downtime reduction 86−61321
condition monitoring to prevent breakdowns and improve maintenance 88−5418
Conesep resin separator for water treatment plant improvement at Drax Power Station 86−56588
conf., Chicago, IL, USA (April 1984) 86−26491
conference, energy systems, risks, benefits, Julich, Germany (April 1984) 85−27936
connection to main grid, planning, site selection, CEGB, EDF, ENEL 88−48788
conservation of energy and renewable energy sources, conf., Washington, DC, USA (April 1985) 86−33897
construction, engineering development prospects *(German)* 86−51173
construction, legal and administrative requirements, Austria *(German)* 87−35787
construction, supplier costs and planned construction costs *(Czech)* 87−42545
contracts, Brown Boveri pipework packages with CAE/CAD 86−66575
conventional and nuclear, cooling water systems, optimisation *(German)* 88−69113
cooling tower splashing system, warm water design and testing *(Polish)* 88−5514
cooling towers, reliability and effectiveness improvement *(Russian)* 87−9338

power stations continued
cooling water discharge streams, dechlorination regulations in USA 86−33122
cooling water intakes, minimising impact on marine life, EPRI research program, USA 85−9696
cooling water treatment, new inhibitor appls. 86−32901
corrosion protection of steel pipes in power station steam cycle *(German)* 85−21427
current transformers for power station differential protection *(Czech)* 86−70953
Czech power generating plants maintenance and repair *(Czech)* 88−23588
Czechoslovak development of power, up to year 2000 *(Slovak)* 85−59570
Czechoslovak power system development, thermal and nuclear generation facilities *(Czech)* 86−25863
decentralised electricity generation using small power stations 88−69081
demineralising plants, electrodialysis water treatment with soda-lime pretreatment 85−15841
design, social infrastructure expenditure *(Russian)* 88−17338
design and construction of 500, 800 and 1200 MW regional power stations *(Russian)* 86−65904
desulphurised flue gas introduction into natural draught wet cooling towers for atmospheric discharge *(German)* 87−15526
desulphurization system for Provence power station thermal generating unit *(Polish)* 88−17347
deterministic-stochastic calc. of power station operation and construction planning *(German)* 86−56514
developing countries' power station operator training for self-sufficiency *(German)* 86−51175
diesel generators under emergency run down conditions in thermal power stations *(French, English)* 85−4883
digital computer package for hydro-thermal power generation coordination 86−56364
digital dynamic model of turbogenerator for training of thermal power station personnel *(Russian)* 87−22120
digital simulation, hardware and software reviews *(Chinese)* 86−38990
direct coal-fired combustion gas turbine R&D requirements 85−60006
distributed digital control system design for Malakoff power station, USA 86−12676
district and space heating from large power stations over distances greater than 50 km *(German)* 86−39531
district heat power station, construction engineering *(German)* 87−71937
district heating distribution in Kiel, peak load model *(German)* 86−19073
district heating power station, effects on atmospheric pollution *(Russian)* 86−45151
district heating power station, feedwater quality testing *(Russian)* 86−39508
district heating power station conversion to variable electric load mode operation using turbodrive *(Russian)* 87−4560
district heating power stations, additional heat generation, analysis methods *(Russian)* 85−53536
drainage water neutralisation using automatic regulation system *(Russian)* 87−4548
Drax power station desulphurisation units, elastomeric coating for flues 88−23735
drinking water production at Dubai power station, distillation and desalination *(German)* 88−18274
dry cooled air condensers for Touss and Kendal PowerStations 86−56582
dry-cooled power station for South Africa 86−56581
Duisberg power station, electrotechnical design and equipment *(German)* 87−64370
Duisburg heat supply station with circulating atmospheric vortex layer firing, operation *(German)* 87−78461
dynamic hour-by-hour power production simulator, appls. 86−32894
dynamic stability improvement using anti-breakdown automatic power discharge system *(Russian)* 86−25670
dynamic stability with induction motors and synchronous machines *(Russian)* 86−56516
economic efficiency estimation of new units at sketch design stage *(Czech)* 87−15399
economics of replacement of old generating plant by new 86−12655
education of specialists by thematic discussions *(Russian)* 87−30348
effluent cleansing and environmental protection at power stations *(German)* 87−35795
Ekibasturzkaya State regional power stations instruction-training centre for operators *(Russian)* 88−17336
Ekibastuz coals in power stations, plant modifications *(Russian)* 86−33036
Ekibastuz power complex, regional power station design and operation improvements *(Russian)* 86−61318
electric distrib. system control and protection using programmable controller 88−36910
electric generators/power transformers, short circuit currents calculation by using the impedance correction method *(German)* 85−32434
electric pipe heating control and alarm systems design and installation, report on IEEE, recommended practise 85−53935
electric power consumption, measuring package for monitoring and control 87−41324
electric power develop in Madhya Pradesh 88−5519
electric power station CAD systems, graphic operating mode develop. *(German)* 88−23591

Finland, electric power expansion programs, profitability comparisons 86−25866
fire prevention, fundamental problems and automatic safety systems *(Russian)* 86−18903
fire protection and risk identification 86−61323
fire-hazard control during coal handling 85−10416
fires in electrical installations of thermal and nuclear power stations, specific cases *(French)* 85−16727
flame detector for boilers of West-Nagoya thermal power plant *(Japanese)* 86−31390
float/sink testing for coal cleanability meas. for power stations 88−75248
flue gas analysis computer for all measurements *(German)* 88−29219
flue gas cleaning by pulsed electrostatic precipitators for air pollution control 87−4154
flue gas cleaning considerations for power plant design *(German)* 85−59845
flue gas cleaning in West German power stations *(German)* 88−48756
flue gas cleaning procedures, technical, operating and financial aspects *(German)* 85−48825
flue gas cleaning process using ammonia electron beam technique *(German)* 88−55186
flue gas desulphurisation, using soda, Ca, and MgO treatments, R and D *(German)* 87−35790
flue gas desulphurisation data collection methodology, field tests 85−53543
flue gas desulphurisation for Coleto Creek power station 86−33099
flue gas desulphurisation for UK power plants 88−48755
flue gas desulphurisation for West Germany power stations *(German)* 85−43864
flue gas desulphurisation plant construction and operation at Altbach/Deizisau power station *(German)* 87−64364
flue gas desulphurisation spray tower design 86−33098
flue gas desulphurisation system, maintenance guidelines 87−15533
flue gas desulphurisation using organic acids 86−56600
flue gas desulphurisation using wet limestone method *(Polish)* 88−5510
flue gas purification, market requirements *(German)* 88−42914
flue gas purification in Austria, politicat, technical and information problems *(German)* 87−35789
flue gas release from cooling towers, meas. at Volklingen power station 87−78444
flue gases of power boilers, fuel components influence on SO_2 content 85−48850
flue-gas cleanup system expansion joint materials 88−62173
fluidised bed combustion boilers, achievement of early promise 85−59984
fluidised bed utilisation for power station air pollution reduction 86−12530
fluidised beds for power generation, economic assessment 87−22128
fly ash disposal by wet slurry decanting 85−48832
fossil fuel combustion, effects of global climate change 88−17361
fossil fuel combustion wastes leaching into groundwater, chemical charactn. 88−11070
fossil fuel fired power stations, effects of US environmental protection legislation *(German)* 86−70814
fossil fuel power plants, coal and LNG trends in Japan 88−48760
fossil fuel power plants, corrosion monitoring system for FGD equipment 88−75440
fossil fuel power plants, DDC of training simulator 88−75454
fossil fuel thermal power station design, pollution control, fire protection etc. 88−23709
fossil fuel-fired power stations, life extension *(German)* 87−78471

power stations continued
fossil fueled power station electric machines, reliability assessment from statistical operating data anal. 86−51582
fossil fuelled power, furnace implosions anal. 86−12671
fossil-fuel, fired boilers, life evaluation and extension 86−33088
fossil-fuel fired power stations, personnel training using simulators *(German)* 85−38802
fossil-fueled, IEEE recommended practice for unique identification, source of component function identifiers, report 85−53540
fossil-fueled, IEEE recommended practises for unique identification, principles and definitions, report 85−53539
fossil-fueled, molten salts latent storage systems for peak load average, economic aspects 85−49126
fossil-fuelled power plant cycling problems and possible solns. 85−53547
fossil-fuelled power station off-design exergy audit 88−75432
foundation design for power station machines 86−25968
French national electric network, electric heating development effects *(French)* 85−26986
French power stations output, annual report for 1984d, availability and efficiency *(French)* 85−38600
frequency condition effects on thermal power plant units and consumers 87−50634
fuel, design, operation, power apparatus and control conf., Liege, Belgium (Oct. 1985) 87−23
fuel accounting automation *(Russian)* 87−9340
fuel consumption, power losses and optimum distribution between power stations in groups *(Russian)* 86−12531
fuel consumption comparison for power stations with differing load distribs. *(Russian)* 88−42910
fuel oil, preliminary S purification, cost effectiveness *(Russian)* 86−65903
fuel oil replacement by coal, expt. study *(Russian)* 86−33038
fuel utilisation efficiency improvement in USSR national economy *(Russian)* 87−78420
Fujian province, China, electric power systems and generating plants 88−68744
gas turbines, 2nd generation *(German)* 86−65913
gas/oil-fired and bituminous coal-fired units, very low-load operation *(German)* 88−69151
gastight drum boiler, thermal loads and temp. conditions of waterwall tubes 87−71930
generating capacity develop. and siting, power system interconnection 88−68790
generating equipment, safe operation period extension between major overhauls 87−64534
generating station ground practices, station and substation interconnection, IEEE guide 87−64202
generating unit availability improvement through operator training [power plants] 88−6171
generation plant, reliability and maintainability techniques 88−69087
generator replacement, installation policies 88−62001
generator voltage quality improvement for consumers *(Russian)* 88−30535
generators and large motors, monitoring 86−45343
generators for power stations, economics, design life, cyclic duty, maintenance and spare parts policy 86−70878
generators under cyclic duty, life extension design considerations 86−70877
generators with automatic excitation regulation under phase asymmetry, steady-state stability *(Russian)* 87−4675
German Federal Republic electricity supply economics, annual report *(German)* 85−4536
Gobo No.1 middle-load thermal power station on artificial island, elec. system aspects *(Japanese)* 85−43869
Grain and Littlebrook D power station commissioning method and results 86−56621
Grain power station boiler construction and commissioning experience 86−56619
grid system power feeding using small power stations 88−61846
ground potential rise from power fault, IEEE recommended practice 88−62007
guidance documentation by COM technique *(German, English)* 88−54945
Hague power station, power and district heating using boilers and gas turbines *(German)* 85−60005
heat and power cogeneration power stations, fuel economy operation and applications *(German)* 85−4886
heat and power generation from coal, SO_2, SO_3, NO, NO_2 and CO removal from flue gases *(German)* 87−35778
heat exchanger system optimization 88−36911
heat exchanger tubeside pressure drop evaluation using BASIC program 85−43670
heat storage, porous water-bearing collector, technical characteristics and costs *(Russian)* 88−5504
heat-resistant ferritic steel component creep damage anal. 88−10939
Heilbronn Unit 7 bituminous coal fired power station, environmental considerations *(German)* 87−57891
Heilbronn Unit 7 district heating station, design and operation, flue gas desulphurisation *(German)* 87−57892
high and medium voltage power stations, man and equipment protection *(Croatian)* 85−64946
high-capacity furnaces emission measuring equipment 85−4498
house-set motor self-starting condition calc. methods compared *(Russian)* 87−78584
Hungarian research and development in electrical energy field *(Hungarian)* 85−33074
HVAC system subsynchronous resonance excitation control 88−69155
HVDC convertor station, creepage distances and clearances survey 85−65016
HVDC transmission in Indian national grid 87−15248
hybrid cooling towers in economic comparison with wet and dry cooling towers *(German)* 87−78466
Hydro-Quebec's power system, hydro-thermal power scheduling model 86−56365
hydroelectric and thermal power stations automatic excitation controller, tuning QC *(Russian)* 86−39513
hydrothermal generation systems, operating reserve evaluation 85−21090
hydrothermal power generating system, operation planning using risk constrained stochastic dynamic programming 85−38902
hydrothermal power system unit commitment, branch-and-bound soln. *(German)* 85−53596
ignition of explosive mixture, preventive measures 85−33114
Inconel 625 corrosion monitoring in power station heat extractor tubes 88−75447
power stations continued

lifetime prediction for parts in corrosive environments 85−21284
limestone injection multistage burners at Edgewater power station, acid rain reduction 88−62168
line outage detector generation reduction scheme using relays 86−39264
Littlebrook D and Grain power station construction, commissioning and operation 86−56617
Littlebrook D and Grain power station operation 86−56622
Littlebrook D and Grain power stations, colloquium, London, England (April 1986) 86−52146
Littlebrook D power station boiler design development 86−56618
load forecasting for thermal-hydroelectric power plant mix, daily operational planning 86−56394
load increases, turbine throttle, steam preheating and burner regulation methods *(German)* 85−60004
Maasvlakte power station, conversion to coal burning *(Dutch)* 85−59986
maintenance, using black-out and failure statistics of the German Power Station Union *(Hungarian)* 85−33091
maintenance planning, financial and labour costs *(Russian)* 86−45042
maintenance programmes using computerised instrumentation 88−75242
maintenance work teams for specific tasks *(Polish)* 88−75232
maintenance zones and field maintenance teams *(Russian)* 86−39000
manufacture and supply by Northern Engineering Industries for power plants 86−52228
Mellach CHP station, flue gas desulphurisation plant for environmental protection *(German)* 88−23729
Mellach CHP station, power to transformers from switching stations *(German)* 88−23723
Mellach CHP station, PROCONTROL P management system using PRAUT process computer *(German)* 88−23732
Mellach CHP station air quality monitoring for environmental protection *(German)* 88−23728
Mellach CHP station boiler plant, performance features *(German)* 88−23719
Mellach CHP station boiler plant for coal and natural gas firing *(German)* 88−23726
Mellach CHP station communication and telephone links, data links and telecontrol *(German)* 88−23730
Mellach CHP station digital control using PROCONTROL-P 13/42 *(German)* 88−23724
Mellach CHP station elec. protection scheme for machines and transformers *(German)* 88−23722
Mellach CHP station feeding Graz district heating network *(German)* 88−23731
Mellach CHP station variable speed drive induction motors for fans *(German)* 88−23725
microcomputer operating and control system commissioning experience *(German)* 86−12654
microprocessor signalling unit for coal mills *(Polish)* 86−19068
Middle Eastern power station operation and maintenance contract types 86−25674
mini power station with gas or diesel engine driving generator 88−5498
mini-power plants with synchronous generators, standardised installation diagrams *(Italian)* 88−42913
Minsk district heating power station safety, accident prevention *(Russian)* 86−39518
model plate type electrostatic precipitation in cool fired power stations, electrical and collecting characteristics 86−15855
modelling, systems approach 86−32643
Modesto tyre-fuelled power plant, USA, state-of-the-art combustion system 88−55178
modular modelling system (MMS) for power system perform. anal. 88−75322
Modular Modelling System for large energy system anal. simulation 86−70753
modular turbine-generator unit construction 86−56620
motors for auxiliary drives in power stations, UK practice and experience 86−70882
Mulheim-Karlich power plant, erection and commissioning 87−50965

power stations continued
multi-unit gas/steam combined cycle power plant, group load control 86−45174
multipurpose test facility for power network life extension 88−75130
multiunit power generation by coal gasification, research and development in Japan *(Japanese)* 87−15498
natural gas for power stations, control using automatic calorimeters *(Russian)* 87−4544
natural-draught cooling towers, air-intake height optimisation *(Czech)* 86−33063
network analysis, component and system techniques *(German)* 86−32718
Neudorf-Werndorf CHP station, heat recovery from cooling systems *(German)* 88−23727
Neurath brown coal fired power station, boiler tube failures 88−43022
neutral/oxidant water treatment conditions, anal. 85−5608
Niederaussem power station, flue gas duct erection for desulphurisation plant *(German)* 88−17366
North American generating capacity construction survey (1984) 85−53372
north eastern region, India, power requirements and meeting the demand 88−36913
Norwegian gas fired power stations, design considerations *(Norwegian)* 88−62144
Nucla power station with circulating fluidised-bed boiler 88−62170
nuclear and fossil fuel power generation, future growth planning for Swiss utilities *(German)* 85−4887
nuclear and thermal power stations, condensing section, optimal design and development system 85−48710
nuclear power plant conversion to coal firing, eval. 85−59891
oil burning power stations, electric filter for flue gas cleaning *(Russian)* 86−45148
oil-fired baseload units, 500 MW, two-shift conversion 87−4591
oil-fired power plant fuel handling, coal/water slurry 88−75430
oil-fired steam boiler, combined coal dust and oil burning, test results *(Romanian)* 88−5506
online plant models used to improve thermal efficiency of large generating units 85−15849
operations personnel training using algorithmic systems *(Russian)* 86−39511
operative personnel action plans, decision-making process modelling *(Russian)* 87−42633
optical fibre data transmission reliability *(German)* 88−17235
optical sensors appls. *(German)* 87−35777
optimal active power, economic redistribution 86−65646
optimal load flow of hydro-thermal power systems, computational using Newton's method 87−9057
optimal reduced order model for power system with two generating stations 88−23287
optimisation in conjunction with purchase under maximum demand tariff 86−45180
overvoltages produced when power station turbogenerators synchronised with circuit breakers *(Russian)* 85−38558
peat for power generation in West-Kalimantan(Indonesia), economics *(Dutch)* 86−51178
performance limitations in electric power generating systems, imposed by high temp. corrosion 86−25868
performance monitoring to obtain optimum financial return 87−21996
personnel behaviour simulation when diagnosing fault situation, matrix method *(Russian)* 86−57137
personnel training simulator, critical contact opening time determ. *(Dutch)* 86−52179
personnel training simulator, struct. of generator simulator *(Dutch)* 86−52178
petroleum coke co-firing for existing oil-fired boilers of Yokkaichi power station *(Japanese)* 86−70805
phase differences of overhead lines, effects on power systems *(Russian)* 88−61824
pinch temperatures in Rankine cycle power generationutilizing heat sources of medium and small temperaturedifferences 86−25867
planned maintenance, for avoidance of emergency repairs, example of power station turbogenerator repair 85−28016
planning, operation and cost effects of environmental protection *(German)* 85−48821
planning system, KWIPS *(German)* 85−59837
plant modernisation, turbine design modifications *(German)* 88−62147
Plume Model Variation and Development database quality assurance for moderately complex terrain 85−53546
PMSP, plant modelling simulation program developed by Central Electricity Generating Board 87−35810
Polish Northern Power District develop., history, organisation *(Polish)* 88−75046
Polish power station closed-circuit cooling in cooling towers, simulation system *(Polish)* 88−75417
pollution, maintenance and upgrading of control equipment 86−25447
pollution, sociologic and economic effects 85−59983
pollution emission control using catalytic reduction DENOX plants *(German)* 87−15520
Pont-Brule power station new number 3 unit, generator, turbine and equipment *(French)* 87−42631
power plant steam condenser reliability improvement 86−25929
power station engineering and economics, book 85−27925
power system anal. for failure prevention *(Japanese)* 86−70575
power system CAD for supply downtime and documentation reduction *(Norwegian)* 85−38461
power system fault limitation automatic control, economics improvement *(Russian)* 87−9099
power system multidimensional time series forecasting for control *(Russian)* 88−48488
power system protection, harmonisation of HV network, power station and generator policies 85−4672
power systems, large-scale low-frequency oscillations damping by strong control of excitation field *(Russian)* 85−59549
power systems, multimachine, subsynchronous resonance, line representation, for Koeberg power station 85−26988
power systems, probabilistic operation considering environmental constraints of power stations 88−68743
power transformer design, construction and operation for power station appl. in USSR *(Russian)* 86−66136
predictive maintenance using online diagnostic monitoring of equipment 88−30430
pressurised fluidised bed combustion for coal-fired power station 86−61315
power stations continued
private power station cogeneration in Spain, economic analysis of financing and profitability *(Spanish)* 85−15800
programmable temperature control device for power station turbines *(German)* 85−38807
pulse disturbances analysis in power plants AIR-85 analyser design and props. *(Slovak)* 86−68789
pulverised fuel combustion plants, NO_x reduction *(German)* 87−15519
pulverised fuel flame monitoring 85−15850
pump motors, group rundown calc., resistance torque formula *(Russian)* 86−45328
quality assurance in power station design and construction *(German)* 88−17231
railway power supplies, traction power from coal power station at Lunen *(German)* 85−10168
RAPAS, installation design *(German)* 87−15216
RAPS-2 power station, India, report on fire incident, future protection recommendations 88−42909
rational variants for development of power systems *(Russian)* 88−5297
real-power controller for large power pools, plant power delivery control *(Russian)* 88−61823
recuperative control of feedpumps of thermal power stations 85−15840
refuse heat/power plant employees blood serum anal. for Cd, Pb, Hg *(German)* 85−21419
regenerative FGD using Wellman-Lord process in industrial power station *(German)* 88−37045
regenerative heat exchanger, thermal anal. 88−69140
regional air quality computer models, EPRI research project RP1630-21 85−4577
regional power stations, power supply reliability improvement *(Russian)* 86−32661
Reid Gardner Station control system replacement 88−69084
relay protection for in-house needs networks of electric power stations *(Russian)* 87−64204
reliability information system for power plant maintenance *(German)* 86−25702
reliability-availability-maintainability techniques and appls., conf., Toronto, Canada (May 1987) 88−6120
remote sensing of power station thermal discharges 87−30137
remote visual testing for power station inspection appls. 88−75241
remote-controlled protection circuit for 35 to 330 kV lines *(Russian)* 87−64335
renewable energy resources to supplement fossil and nuclear fuels *(German)* 88−23599
research, power plant design and operation, role of science *(German)* 86−51446
retrofitting for environmental protection and new construction *(German)* 87−51011
Rhenish-Westphalian lignite-fired power station retrofit requirements for environmental protection *(German)* 86−19085
Riedersbach II power station, noise reduction in 160 MW block *(German)* 87−78450
risk comparison for different power supply options 88−69120
Romanian power station development planning, Wien Automatic System Planning software package appl. *(Romanian)* 88−10817
roof covering reliability, power station construction *(Russian)* 88−36904
Rovinari thermal power plant, effects of coal characts. on technical/economic parameters *(Rumanian)* 85−21434
Rovinari thermal power plant, lignite enrichment technology *(Rumanian)* 85−53532
Rybnik Power Station boiler leak detection using acoustic instrumentation *(Polish)* 88−75420
safety systems for fire detection and control 88−75238
Sarni, India, surface atmospheric electric field near thermal power station 86−65926
scientific and technical progress in electric power generation in USSR, an overview 85−4711
SCR converters in drive control systems at Opole power station *(Polish)* 88−75718
SCR DeNOX plant at Altbach/Deizisau power station, operating experience *(German)* 88−69143
self-starting electric drives, initial motor voltage *(Russian)* 87−58351
services motors starting *(Russian)* 85−43916
SETPOS program system, simulation of electric transients in power stations, FORTRAN-77 standard 88−23249
Shajiao coal-fired power station, boiler plant design and operating experience *(Japanese)* 88−69142
short-circuit currents in power station substations and lines *(Polish)* 87−4442
SICLE software package for power plant behaviour studies 88−75252
simulation of power plants, conf. Cuernavaca, Morelos, Mexico (Nov. 1984) 85−54041
simulator design using gateway devices 88−75253
simulators for operator training, new generation 85−27138
single speed synchronous motors in American and Canadian power stations 87−42840
site allocation, optimisation *(Russian)* 87−15510
site selection, energy parks *(Italian)* 87−78430
siting, mathematical problems and environmental effects allowance 85−48848
Skoda 125 MW and 350 MW steam boilers for Jorge Lacerda thermal power station 85−48827
smoke emissions from chimneys, math. model *(Russian)* 87−9345
soil heating by power station waste heat *(Hungarian)* 86−19681
solar-thermal power plants, heat engine performance and plant efficiency improvement 86−65984
solid fuel handling plants in thermal power plants in Romania *(French)* 85−15805
Soma B power plant condensing turbine electro-hydraulic control 88−62178
steam and gas turbines, efficiency of Soviet units *(Russian)* 86−33042
steam condensers, circulating-water pipe internal surface cleaning equipment develop. *(Japanese)* 87−35816
steam extraction line corrosion-erosion mechanism 88−75245
steam generators, Babcock and Wilcox service life extension program 86−25898
steam plant, high-pressure preheater header systems, thermal stresses *(Russian)* 86−33041
steam plant, water chemistry aspects of rifled tubing 86−32902
steam plants, testing of membrane modules in feed pump collectors *(Russian)* 86−65795

power stations continued
steam raising from H_2 for power generation *(German)* 87−15523
steam system macrofouling control, continuous low-level chlorination 86−32900
steam turbine condensers, optimal flow of circulation water 85−15839
steam turbines for powerstations, development trends *(German)* 86−39529
steam-cycle corrosion control in power stations by water treatment 88−75235
steel corrosion, by water, rate determ. using polarisation resistance measurement method *(Polish)* 85−21431
steel tube weld life prediction using PODIS software package 88−75448
storage batteries for generating stations and UPS, sizing by duty cycle and load 87−30901
structural analysis, nonlinear finite-element computer code manual 85−53375
structural materials, transient phenomena, effects and prevention 85−59626
Subsaharan Africa, power stations utilising renewable energy resources, develop. limitations 88−69088
substations and generating plants, IEEE device function number standards 86−51105
subsynchronous resonance in power station with two identical turbogenerators 86−25869
subsynchronous resonance of two neighbouring turbogenerators 87−4650
Sulzer 9RTA58 diesel generator, Guernsey power station, operation 88−69131
supercritical once-through boiler unit adaptation to utility generation management plans 85−65132
superheater tube life prediction, ultrasonic thickness meas. technique 88−70401
supervisory control, data acquisition and automatic control systems for power facilities, IEEE standard 87−64757
supply and demand for electricity generating capacity, Netherlands *(Dutch)* 85−4888
Swaziland, power stations, distrib. systems and storage position optimisation *(German)* 88−48758
swedish electrical power installations, principally hydroelectric, measures for increasing capacity *(Swedish)* 85−15914
Swiss electricity supply, develop. prospect *(German)* 87−42380
Swiss power station trends and policies *(German)* 86−70743
switch, cond. tester development *(Japanese)* 86−70725
switched operating conditions economic simulation *(Russian)* 88−61822
switchgear heater power supplies, centralised control using relative humidity detectors *(Japanese)* 85−39101
switchgear maintenance to prolong power station working life 88−55100
switching operations, computer aided automatic completion of forms *(Russian)* 86−45041
synchronous motor applications in power stations, bus transfer and reliability comparison with induction motors 86−70887
synchronous multi-channel recording, automated oscillograph for EM wave and lightning surges *(Russian)* 87−77318
technical water supply, use of sea water in power stations, problems and solns. *(Russian)* 87−78224
telecommunication equipment, IEEE standard service conditions, report 85−51851
thermal, cooling water intakes, measures for preventing entrainment of living organisms *(French)* 85−38820
thermal, cooperation with hydro plants for fulfilling supply demands *(German)* 85−53245
thermal, coordination optimisation with hydroelectric power plants 85−48545
thermal, electricity generation, potential health hazards 85−9594
thermal, environmental pollution by power industry−an overall view 85−15817
thermal, environmentally acceptable *(Dutch)* 85−15808
thermal, high-pressure feed heaters, advanced design, future improvements *(German)* 85−15802
thermal, in Soviet Union, effectivity improvement experiences *(Hungarian)* 85−15815
thermal, operating conditions for meeting demand in Switzerland *(German)* 85−38884
thermal, regenerative preheat in flash evaporators *(Russian)* 85−43866
thermal and hydroelectric power system optimal operation, decomposition and co-ordination *(Chinese)* 86−25490
thermal economy improvement of distinct heating power stations, Russian *(Russian)* 87−9335
Thermal Information Program (TIP) for coal fired electric power plant operator guidance 87−35808
thermal plant in energy production system, deterministic control theory appl. 85−53553
thermal power generating unit commitment, Lagrangian relaxation and nondifferentiable optimisation method 87−64099
thermal power plant boiler manufacture, worldwide developments *(Croatian)* 85−38812
thermal power plant component wear, preventive maintenance and salvage 88−75411
thermal power plant life extension using systematic maintenance programme 88−48762
thermal power plant pressure parts, creep fatigue damage 86−33087
thermal power plants, exhaust gas diffusion into atmosphere, statistical data anal. *(Japanese)* 86−33076
thermal power plants, N compound processing of desulphurised waste water *(Japanese)* 86−12653
thermal power plants, use of dissociating gases as working fluids 86−33132
thermal power plants, water supply considerations *(Rumanian)* 85−53531
thermal power plants and the environmental impact of nuclear power plants *(Croatian)* 88−36983
thermal power station, automatic isolating system for emergency reduction in frequency *(Russian)* 87−42634
thermal power station, math. model of steam production for control system design *(Croatian)* 88−62145
thermal power station, optimal load distrib. of turbogenerators, computer procedure *(Russian)* 87−57855
thermal power station, protection and protective devices, modern trends 86−65900
thermal power station auxiliary plant and equipment, reliability and economy *(Italian)* 86−39546
thermal power station boiler plant coal ash, dielkometric determ. of C content *(Russian)* 88−43024
thermal power station chemical water treatment plants, automatic water composition monitoring using microcomputers 88−11066
power stations continued
thermal power station coal-dust preparation system, explosive ejection protection *(Russian)* 86−39512
thermal power station conversation from oil to gas in USSR unified power system *(Russian)* 87−64333
thermal power station cooling towers, pollution effect on overvoltage safety equipment operation *(Hungarian)* 88−55187
thermal power station design maintainability standards requirements, maintenance and repair *(Russian)* 87−57856
thermal power station effects on environment, influence of drives for air and fuel supply *(Slovak)* 87−4551
thermal power station equipment selection and construction *(Polish)* 88−11045
thermal power station feedwater, chemical purification methods *(Russian)* 86−33055
thermal power station hydraulic ash-removal system used in unfavourable weather *(Russian)* 87−57854
thermal power station maintenance, chemical and metallurgical laboratory tests (July-Dec. 1984) *(Japanese)* 87−30378
thermal power station NO emission, power system scheduling method 87−42373
thermal power station operational planning, reliability assessment computer program 86−33069
thermal power station steam turbine plant regulation, polyblock principle 86−51437
thermal power station turbines, monitoring of operating life *(Croatian)* 85−32339
thermal power station with circulating water supply system with cooling towers, power limitations *(Russian)* 87−64332
thermal power stations, ash-clinker residues usage, economic effectiveness *(Russian)* 88−17335
thermal power stations, circulating water cooling by external sprinkling systems *(Russian)* 88−62030
thermal power stations, combustion characteristics of heavy oil *(Japanese)* 87−35783
thermal power stations, dumper type fuel loaders, fault location of electrical equipment *(Russian)* 86−33044
thermal power stations, earthquake damping effect *(Japanese)* 87−35784
thermal power stations, expected energy generation and fuel costs, approx. eval. methods *(Czech)* 88−10818
thermal power stations, generating units performance characts. revision using real-time approach 85−38821
thermal power stations, heated air supply to turbine and boiler rooms *(Russian)* 86−33049
thermal power stations, long term storage techniques *(Japanese)* 88−75423
thermal power stations, NO_x/SO_2 flue gas contents reduction technology *(German)* 85−15813
thermal power stations, operation and plant monitoring criteria *(German)* 85−21425
thermal power stations, standards for toxic substance emission in USSR *(Russian)* 87−15500
thermal power stations, technical reliability planning, effects on annual production costs *(German)* 87−50984
thermal power stations efficiency improvements in USSR 88−69133
thermal power stations in developing countries, availability and reliability *(Polish)* 88−17346
thermal power stations in Kazakhstan, suitability of Borlinskii coal for firing 85−32345
thermal power stations in Yugoslavia, operating life of equipment *(Croatian)* 85−32338
thermal power unit commitment anal. by hybrid dynamic programming *(Korean)* 85−300
thermal-electric power plant, OP230 boiler pulveriser unit, sequential control system *(Polish)* 86−19067
thermo-hydro coupled power systems optimal scheduling 85−38464
thermodynamic limits to efficiency 85−59990
thermodynamic methods for water treatment systems in thermal power stations, complexing agents *(Russian)* 86−33035
thermoelectric power station coal, international seaborne trade 87−4486
Tisza thermal power station, combustion of natural gas with high inert content *(Hungarian)* 86−12645
TMGP-204 KhL boiler heating conditions optimisation *(Russian)* 88−43023
training courses for power station maintenance personnel in USSR *(Russian)* 86−40399
training of operators to start-up and shut-down generators using flowcharts 85−27988
training of power station operators: strategy against mistakes *(Russian)* 88−31327
training of power station operators using advanced trainers and simulators 85−27987
training of power station staff by computer simulation of 200 MW power unit *(Polish)* 86−33965
training of power station thermal-power engineers training in USSR *(Russian)* 85−32949
training simulator, condensing tandem compound type steam turbine simulation 86−19087
training simulator of plant operation for Tarong power station 87−36383
training simulators, PC based 88−75254
transformer fire at Volklingen power station, causes and fire fighting procedures *(German)* 85−39502
transformers, resonant overvoltages initiated by cable network switching transients 86−51708
transformers for power stations, construction aspects 85−60257
transmission network and power station protection, harmonisation of policies 86−51116
transmission network loss factors, load distrib. and energy consumption, computer anal. *(Hungarian)* 88−68872
treble Rankine cycle efficiency in cascaded potassium/diphenyl/steam turbine plant 86−33080
Treble Rankine Cycle thermal power stations, IEA study results *(German)* 85−48835
truck tipper replacement *(Russian)* 88−5505
Tsing Yi Power Station, Chloropac generating units for seawater hypochlorination 87−21995
turbine low pressure rotor crack, Lavrion power station *(German)* 86−25677
turbine modelling for control system anal. 85−59847
turbine plant equipment characts. determ. by full scale computing expt. 88−43040

power stations continued
turbine value control systems for thermal power plants, research *(Japanese)* 86−12652
turbogenerator, TGV-500, nonsynchronous operating conditions *(Russian)* 86−39677
turbogenerators, high power machine development, operation and appls. 86−70858
turbogenerators for power generation 88−30647
turbogenerators in cogeneration power stations, noise characts. *(Russian)* 87−4658
UK electricity industry privatisation, industrial effects 88−75095
UK future electricity demand, need for new power plants 88−10719
ultrasonic testing for reliability prediction of power station equipment *(Russian)* 86−26936
undervoltage relay for monitoring power station and substation DC operating supplies *(Russian)* 86−45025
unified power distribution systems, allowance for losses *(Russian)* 86−39115
UPS for power generating stations, appl. and testing, IEEE recommended practice 87−22542
utility cogeneration systems providing cost-effective district heating 85−53541
vacuum deaerator plant of district heating power station *(Russian)* 86−39514
valve headgear, lubrication and wear, case study 88−55190
variable frequency fed AC drive appls. in power stations 88−11080
variable pitch, fixed blade circulating pumps in Soviet fossil fuel power stations *(Russian)* 86−39515
variable speed drives for coal-fired power station auxiliaries 86−71090
vibration control apparatus for auxiliary equipment *(Russian)* 87−4541
vibration testing in thermal/nuclear power stations *(Russian)* 88−37038
vinyl ester resin pipework for desulphurisation of combustion gas in power stations *(French)* 87−57883
Volklingen model power station fire protection design and commissioning *(German)* 86−6462
vortex burners, aerodynamic investigation of channel flow at guide vanes outlet 85−48852
Ward-Leonard and semiconductor faults anal. *(Italian)* 88−23710
waste gases, NO_x removal by electron beam installation *(German)* 85−38354
waste heat from thermal power plants, utilisation for agriculture and horticulture *(Hungarian)* 86−12646
waste to energy power generation, refuse-derived fuels, waste fuels and cogeneration 86−56598
water chemistry research, EPRI reports 86−19017
water purification using magnetic filters, absorbing baffle model *(Russian)* 86−65796

EM launcher power supplies using homopolar generator charged inductors 87−19167
emergency power control by automatic transfer switching 86−6302
EMI, elimination and influence magnitudes *(German)* 85−46586
EMI and EMC specifications in power supply design 86−56850
EMI aspects in switching power supply design 87−33461
EMI design guidelines for switched mode power supplies 87−12758
EMI due to power systems, causes, effects and reduction 85−30057
EMI requirements of power supplies, description of enclosed open field test site 87−30836
emission filters for switched mode power supplies 86−20688
encapsulated PSUs and DC/DC converters 85−16107
energy characts. improvement for pulse loads at constant voltage *(Russian)* 87−36012
energy consumption of industrial establishment, in-house anal. and monitoring *(German)* 86−66512
energy efficiency innovations in electric motor technology 86−45526
energy recovery in electroluminescent drive systems 87−20948
energy resources used in production systems, economic-functional anal. *(Czech)* 87−15408
energy storage transformer design concepts for magnetic flux compression generators 88−43252
energy systems, communications technology impact 85−60329
energy-efficient residential appliances: performanceissues and policy options 86−45838
energy-saving power supply for New York Telephone Co. equipment 87−4815

power supplies to apparatus continued
environmental factor of supply to industrial electronic power equipment 85−64901
environmental stress screening 86−26175
environmental stress testing 86−26172
EPR spectrometer electromagnets, HV power supply system *(Polish)* 85−39109
EPR spectrometers with AFC, power supply of klystron oscillator 87−65833
Ericsson power supply equipment, operation and maintenance 87−62767
ERIPOWER MICRO-UPS 250 for personal computers and office equipment 88−17722
Eta-Beta II, poloidal and toroidal crowbar systems 85−4694
ETIGO-I pulse power generator, plasma diagnosis of ion diode 88−62499
Eurocard-mounting PSUs, linear and switched mode types 85−16108
European power electronics, historical review *(German)* 87−10644
European Synchrotron Light Source, magnet power supply 88−47953
evaluation of standard power supplies 86−52642
excavator power demand prediction using probability technique 86−45530
excimer lasers, high-energy, using thyratron switches 88−20565
excitation automatic regulators, relay control *(Russian)* 87−30758
exclusive feeding of important load by grid line and switchyard *(Portuguese)* 86−25563
experimental fusion reactors, power supply development 86−45490
expert system design for mining appls. 86−45880
explosive fuses for magnetic pulse generators, opening switch design 88−43309
explosive generator driven single step Meatgrinder circuit for 100 TW generation 88−43313
explosive magnetic generators, foil behaviour of explosive commutators 88−43308
explosive pulse power complex, fibre optic monitoring, pneumatic control links of capacitor bank 88−49169
explosive pulsed power, computational problems 88−37317
explosive pulsed power, firing complex 88−49056
explosively driven pulse power system driving explosive opening switch and inductive load 85−5257
external LV supplies for low power units 85−61070
external power supplies, features and selection 87−58182
external test power supply for Shinkansen system-100electric railcars *(Japanese)* 86−66408
facilities at 1985 Electric Installation Show *(Japanese)* 86−56824
factory electricity supplies in USSR, limitation curve development for loss minimisation *(Russian)* 86−33869
fast high current switch for higher power switching power supplies 88−63523
fast power MOSFETs in pulsed power application 88−71594
fault protection in high power pulse modulators 87−37081
fault tolerant power system design for fighter aircraft 88−5093
fault tolerant power system for flight-critical loads, software design 88−5092
fault-tolerant aircraft power system, conceptual design 87−77793
feedback control loop design, higher switching frequencies 87−78811
feeder protection, fully microprocessor-based 86−12988
Fermilab 1 TeV Switchyard, pulsed power supplies 86−26141
Fermilab Antiproton Source, high precision current regulated power supply 86−26145
Fermilab DO overpass power supply system 86−26142
ferrite circuits and materials for chopper power supplies *(French)* 86−67001
ferrite core characts. for 500 kHz switching mode convertor transformer 86−28704
ferrites, soft, trends in switched mode power appl. *(French)* 88−37319
ferroresonant circuit, transient characts. in AC failure *(Japanese)* 85−49735
ferroresonant line conditioner and current voltage transformer for power supply disturbance minimisation 86−56826
ferroresonant power supply circuits, transient response anal. 85−27507
ferroresonant-stabilised current supply units for disturbance suppression *(German)* 88−75715
FET full bridge switcher for inductorless capacitor charging for Nova 10 mm rod amplifiers 85−5238
FET generator for US piezoelectric transducer 88−12207
fibre optic hybrid sensors with optical power supply, GaAlAs laser array 88−29424
field chopper controlled two power supplies driven DC series motor, characts. 88−5701
fighting vehicle electronic/electrical systems, modelling and simulation 87−58375
film projection xenon lamp, 250 W, transistor power supply *(Russian)* 86−67028
film projector Xe lamp power supplies *(Russian)* 86−26162
Finnish PTT power equipment maintenance safety orders 88−30874
flash X-ray machine SWARF, pulse power supply improvements 85−4252
flat cables and overhead track systems 86−56428
flexible 19-in. power-supply rack eases system reconfiguration 88−6639
flicker voltage caused by arc furnaces *(German)* 86−19374
flight of stairs power supply for pulsed solid laser continuously adjustable voltage *(Chinese)* 86−9903
flue-gas desulphurisation plants, high speed transfer systems for uninterruptible power supply 87−78416
fluorescent lamp high frequency power supply, operating parameters *(Russian)* 85−39299
flux-stabilized spectral source of wavelengths from 0.25 to0.5 μm 86−7290
flyback converter-power supply unit for monitor and TV applications *(German)* 87−43192
flyback converters for power supplies to low power circuit 85−39905
flyback principle in control of a single ended offline quasi-resonant power supply 88−17751
flyback technology in small 50 kHz power supplies 88−30828
flywheel-generator set for the FTU poloidal fields power supply 85−49034
food processing industry, distribution network and electrical installation design for supply continuity *(Italian)* 85−10292
food processing machinery plant welder innovations 86−19684
four-terminal AC standards, correct use 86−38479
French Polynesian development of photovoltaic power 86−45282
Freon 113, immersed cooling appl. to power supplies for TORE SUPRA poloidal field coils 88−69614
frequency convector, transistorised, for three-phase induction motor supply *(Hungarian)* 86−12889
frequency convertors as power sources, damping network parameter optimisation 86−45520

power supplies to apparatus continued
frequency convertors for metallurgical heating *(Japanese)* 86−57053
frequency invertors for fan and pump motor energy saving 86−66147
FS-400M optical submarine transmission system, power feeder 86−30823
FTU power supply system, final design 87−72284
FTU power supply system design 88−69513
fuel cell, alkaline-matrix type for space vehicles 87−4876
FULLBACK transistor inverter type uninterruptible power supply for office computer *(Japanese)* 85−39100
fully programmable power supply system, high performance 85−53760
function generator for controlling the magnet power supplies of a superconducting spin synchrotron 88−607
functional tests and stability analysis 86−27077
fusion reactor pulsed load perturbation of mains power supply *(Italian)* 86−12572
fusion reactor pulsed power supplies, 13 kA 13 kV DC solid-state turn-off switch design 86−45577
fusion welding, electric arc characts., reignition, stability, power supply suitability, review 87−79245
G-shaped inductive-capacitive converter, influence of ferromagnetic core *(Russian)* 87−22538
GAMMA 10 tandem mirror operating and control system *(Japanese)* 88−43160
gas blown spark gaps of Advanced Test Accelerator power conditioning system 85−27130
gas laser exciter, thyristor/pulse transformer for magnetic pulse compressor circuits 87−46953
gas-discharge lamp of apparatus for pulsed automated microphotography, power supply unit 88−18203
gas-metal-arc-welding inverter power sources 87−79252
gas-metal-arc-welding power supplies, trends and develops. 87−79251
generalised energo-technical model for estimating consequences of power supply disturbances *(Russian)* 86−7341
GEODE, new power supply equipment for telecom. systems using microprocessor monitoring 87−30819
GEODE power source for telecom. equipment, decentralised power DC unit 88−30844
gigavolt potentials by electrically charged macroparticles 85−5246
glass melter for nuclear waste, power supply and controls 87−15868
glass melting for nuclear waste vessels, power supply and control 86−7302
global geometry of polyphase structures fed by complex current systems *(Italian)* 87−22512
Global Specialties model 1301, review 86−739
GPIB-controlled power supplies, cost reduction 86−20282
grain handling and feed production industry, electrical equipment and process control system 86−19683
graphic display controller operating from single 5 V power supply 85−49966
gridded power tubes for plasma heating applications 87−15900
Grundig 2×4 Super VCR, servicing 85−3756
Grundig VHS recorder stabilized power units *(German)* 85−14475
GTO appls. in resonant power supplies and power convertors, cct. anal. using PSPICE package 88−43325
GTO PWM inverters, parallel running and power balancing control 88−5759
GTO thyristors in invertors for uninterruptible power supply systems 86−61635
H7F ferrite material for HF switching power supply appls. 88−71904
half-controlled thyristor convertors, output filter design estimation 86−66193
half-wave voltage converter based design 87−59147
Hamburg U-Bahn railway switching station for energy supply monitoring and control *(German)* 88−11444
harmonic distortion reduction of power supplies loaded by thyristor convertors by using resonant filters 86−66182
harmonic vibration effects on power networks of power supplies to consumers *(German)* 87−15171
harmonics due to convertor-fed reversing drives, anal. *(German)* 86−40192
harmonics suppression in rectifier technique *(German)* 87−5656
Harris HV1000 Induction Motor Energy Saver *(Dutch)* 86−19267
hazardous areas in offshore oil facilities, electrical equipment requirements 85−22041
HCMOS logic ICs, battery backup 86−52779
heat sinks design 86−738
heavy current PCBs for power supplies for computer engineering *(Bulgarian)* 85−6585
heavy duty power source, math. model selection *(Russian)* 87−64710
Heidelberg sewage works, Brown Boveri supplied electrical and computer control equipment 85−65687
helical explosive magnetic generators, magnetic flux cutoffs 88−43301
helical flux compression generators, simulation and experiments comparison 88−49062
helical high explosive flux compression generators for exploding bridgewires, experiments 88−49061
helical magnetic flux compression generators for plasma focus 88−49059
helix MC-generators, magnetic flux diffusion losses 88−43299
hermetic power hybrid ccts. with high performance 86−35246
HEXFET fly-forward converter, new topology for switched mode power supplies 87−51364
HEXFETS improve switch-mode power supplyreliability 85−54653
HEXPAK power modules with MOSFETs, 60 to 500 V, 28 A, features 86−46557
HF, DC/DC and resonant convertors conf., Washington, DC, USA (April 1987) 87−65086
HF avionic flyback power supplies, practical design considerations 87−78809
HF chopper power supply transformers with partial turns on ECL41 ferrite core *(French)* 87−65811
HF convertors for induction heating appls., design and construction 88−55424
HF elec. process heating, computer control of Class-E amplifier power supply 88−43281
HF induction furnaces, series resonant power supply description *(Japanese)* 88−55726
HF induction heating, voltage-fed MOSFET power supply with PWM power control and protection 87−78770
HF inductors with ferrite on permalloy cores, design *(French)* 87−17411
HF power conversion, conf., San Diego, CA, USA (May 1988) 88−70012
Hf power convertors using fast recovery rectifiers 88−70546
HF power supplies, power semiconductors 87−78805
HF power supplies using hybrid IC technology 88−70542
power supplies to apparatus continued
HF power supply filters using amorphous magnetic materials 88−64882
HF power supply sources, harmonic resonance phenomena study 88−62428
HF power supply voltage and current measurements 87−77323
HF power switching, effective inductance of gapped ferrite cores calc. 85−61104
HF resonant flyback power supply, thyristor-diode study 88−69534
HF sequential switching invertor with inductive energy processing loops 86−33509
HF SMPS, ceramic multilayer capacitors for improved output filtering 87−24497
HF SMPS, output filter capacitor appl. and mounting 88−70510
HF SMPS output filters using ceramic capacitors 88−49053
HF SMPS transformers design, meas. techniques 88−55512
HF SMPS using bipolar and MOSFET switches 88−69594
HF switched mode PWM power convertors for supply appls., state-of-the-art review 88−69593
HF switching convertors using power FET modules 87−51340
HF switching-supply, appl. of magnetic materials in transformer cores 87−38664
HF transformer core selection for SMPS, ferrite characts. exam. 88−30926
HF transformers for power packs *(Swedish)* 87−6175
HF transistor invertors for low mass welders 85−65351
high availability power supply units *(French)* 86−39968
high density power supplies using synchronous rectifiers 88−75803
high frequency welding with 10 kHz convertors, electrical parameter pulsation effects on weld edge flashing 85−32849
high gain fusion target development facility 6-10 MJ driver 87−15899
high power high voltage generator using COMFET 88−69562
high power RF electron tube, heater power supplies 87−37770
high power switched mode power supply unit *(Hungarian)* 85−9990
high pulse rate freq. fast rise time pulse generator using H_2 thyratron 87−43278
high reliability power supply system for air data test equipment 88−63519
high stability 0-100 A supercond. mag power supply *(Chinese)* 87−36006
high voltage power supply with integrated photovoltaic cell array for satellite-borne instruments 88−75744
high-density resonant power supply using high-voltage IC 87−78810
high-frequency induction hardening with controlledcapacitors-discharge pulse-operation processes 86−52053
high-frequency supply sources for electrical equipment *(Russian)* 87−72237
high-performance computers, power supply current prediction 86−6918
high-power conditioning for space applications 88−61567
high-power static invertors for rolling stock auxiliaries 85−60319
high-speed superconducting foil breakers 87−68002
high-speed thyristor converter for electrophysical apparatus, with combined commutations 87−16864
high-voltage DC power supply developments, review 85−44089
high-voltage supply and control system for gyrotrons in fusion reactor 85−48793
higher voltage systems for cars, dual 42/12 V system, alternators 88−49256
highly integrated bridge-circuits for high power applications 88−70553
Hitachi arc welding robots, sensors and power source development 85−49224
Holec Dynamic Diesel UPS for computers, operation 88−37074
Holec Octonet system for automatic electricity supply switching *(Dutch)* 85−60350
hollow cathode ion source, starting cct. config. 85−39914
hollow emitter power transistors for switching power supply appls. 87−11756
home computer supply, power-line protection 85−21245
homopolar generator, coaxial energy storage inductor design 85−5119
homopolar generator power supply, compact pulsed, construction and testing 87−22409
homopolar generator power supply for EM railgun assembly and testing of compact lightweight system 85−5244
horizontal deflection circuit, design *(German)* 88−12141
horticulture, electricity and gas consumption *(Dutch)* 86−52087
hospital elec. and communications installations design *(German)* 88−54684
hospital operating theatres, safety aspects of electrical panels *(Italian)* 86−26130
hot strip rolling mill, static VAr compensator for power factor and harmonic current improvement 86−45850
house lights and video/audio recorders, control using home computers 85−10214
HPA for direct broadcast satellite appls. 85−42536
HT battery, 110 V AC and 12 V DC, speed charging 86−61578
Hubble Space Telescope Electrical Power Subsystem 86−38897
Hunting Hivolt Limited products for ion and electron beam appls. 87−15902
HV AC power supply with variable frequency output, 0.5 to 10 Hz 85−32602
HV aerospace circuits, testing and failure analysis 85−31898
HV asynchronous motor stresses when switching power supplies *(Romanian)* 88−62344
HV capacitor bank installations for industrial plants 85−53998
HV circuit breakers, UKP-220(380) power supply units, ballast resistor selection *(Russian)* 87−15855
HV current installations, earth protection conductors *(German)* 86−69272
HV electro-optic drive amplifier, using power MOSFET pair 88−56479
HV electron gun with grid control, power supply system 86−20285
HV excavator motor, heavy-duty, longitudinal compensation calc. under starting conditions *(Russian)* 85−16308
HV generator supply system, failure anal. by probing transformer LV side, computer simulation 86−12928
HV nanosecond pulse generator for streamer and spark chambers 88−32051
HV power cables in Intercity Experimental train *(German)* 86−45758
HV power source, pulsed, high repetition 85−11019
HV power sources for CRT displays, testing and safety 85−31401
HV power supplies, appls. and relevant safety requirements 88−62474
HV power supplies, market evolution 85−16109
HV power supplies to chem. plants, reliability measures and requirements *(German)* 87−72638
HV power supply appls. and safety requirements 87−15903
HV power supply design, recent technological advances 85−32628
HV power supply elec. characts. when feeding electrostatic precipitators *(German)* 88−37294
HV power supply for deflektron TV camera tube 87−65836
HV power-feed equipment for TPC-3 transpacific optical fibre submarine cable system 88−30872

power supplies to apparatus continued
HV pulsed power generation using transmission line transformers 87−51361
HV pulsed power system design, component evaluation 85−5251
HV rectifier sections, based on semiconductor breakdown diodes of tablet structure, for electron accelerator power supplies 85−44096
HV regulated supply for photomultipliers 88−50019
HV resonant power supply with high efficiency and low EMI 88−69503
HV supply and 100 keV electron gun for slot microtron 88−36344
HV supply for backward-wave tube, using semiconductor convertor 86−67022
HV transformer-rectifier units for supply systems of electrical industrial plants 87−9659
HVIC MOSFET driver for power supply appls 88−75812
hybrid and small wind energy conversion, BWEA conf., Reading, England (May 1986) 87−16290
hybrid circuits for power supply *(German)* 88−38387
hybrid offline power convertor module with high power density 88−69504
hybrid power modules as embedded power supplies, charact. 86−57642
hybrid power system for remote satellite earth station in Antarctica 87−72264
hybrid power systems using closed cycle vapour turbogenerators, telecommunication appls. 86−61067
hydraulic power pack drive using squirrel cage motor 88−43324
hydroelectric power plants, auxiliary electrical supply systems 86−45228
IC commutator, LM621, for brushless DC motors 85−44000
IC devices, power supply sequencing avoidance at chip power-on time 85−33648
ICF for pulsed power appls. using lasers, coronal fluid dynamics study 88−62495
ICF using ion beam propagation, microinstability study 88−62493
IEEE 488-based power supplies for ATE 86−17743
IEEE-488 power supplies expand capabilities and applications 88−556
IFSMTF power and switch system 87−15888
IFSMTF power supply regulator 87−10680
Ignitex experiment, pulsed homopolar generator power supplies 88−69520
image convertor, voltage supply to travelling-wave deflection system 85−23364
implosion based pulsed power generation, stability requirement simulation 88−62494
in-circuit process testing for power supplies 86−20304
independent power supplies using synchronous motor/generators, starting phenomena investig. *(Russian)* 88−48912
independent supply system for transport facility with AC and HVDC channels *(Russian)* 86−7253
independent supply system voltage regulator working order control *(Russian)* 88−55470
Indian Electricity Boards, LV on domestic premises leading to use of voltage stabilisers 87−15255
induction drive machine, failure-free source of supply with flywheel energy storage *(Russian)* 87−43509
induction furnaces, distorted supply voltage, single-phase load with compensation elements *(Polish)* 88−76047
induction generator/force-commutated rectifier system, appl. as DC power supply 87−78766
induction heating, dual-frequency, installation power sources, frequency conversion and control *(Russian)* 87−43657
induction heating, installation, inductors and power supplies, EDF research *(French)* 85−60555
induction heating power supplies using Philips BUZ80 MOS devices *(French)* 88−11493
induction heating power supply using Philips 800 V BUZ80 MOSFETs 88−18223
induction heating using thyristor convertor, inductor reactive power compensation 86−45821
induction motor derating for unbalanced three-phase supply 86−12822
induction motor drives, 3-phase, with single phase supply, transient phase balance 85−65480
induction motor variable-frequency supply with co-ordinated voltage and frequency control 86−70924
induction motors, controlled voltage source supplies, slip frequency control 86−26035
induction motors, current source invertor fed, comparison of star and delta connections 85−21614
induction motors, effects of nonsinusoidal voltages containing subharmonics 86−6743
induction motors, saturated, with series capacitor on supply, starting transients 87−9559
induction motors, supply voltage regulation 85−43984
induction motors fed by reduced frequency voltage source, adaptation of design *(Polish)* 85−5096
induction motors with PWM supplies, time domain response 85−43976
inductive energy accumulator appl. in synthetic test circuit for VVN-220 air break switches 88−43328
inductive energy storage plasma focus device, num. simulation 87−43263
inductive parametric periodic current generator stability *(Russian)* 87−4803
inductive-capacitive converters for electroplating power source equipment 88−43506
industrial agglomerations, thermal and power engineering decomposition *(Czech)* 86−7313
industrial and commercial power systems conf., New York, USA (May 1988) 88−55824
industrial and office power supplies, line disturbance effects, definition and mitigation 86−39123
industrial appl., conf., Denver, CO, USA (Sept./Oct. 1986) 87−36317
industrial automatic programmer appl. to energy usage management *(French)* 86−32735
industrial control cable network, cost reduction using tandem links 85−44325
industrial electrical installations, energy needs and supply contracts *(Italian)* 88−61888
industrial electrostatic precipitators, pulsed energisation study 85−24764
industrial grade supplies require semicustom design 85−28338
industrial laser power supplies using HF power converters 88−58612
industrial laser units, power supply requirements study 88−58611
industrial load supply, static convertor harmonic distortion and voltage drop causes and effects *(French)* 88−62806
industrial loads, electrical supply and renewable resource integration *(Italian)* 86−71149
industrial plant power conditioning 87−9682
industrial plant power supply systems, EM interference study *(Russian)* 85−21161
industrial plants, IEEE recommended practice for electric power distribution 87−21921
industrial power supplies from HV transmission lines *(Croatian)* 85−38504
industrial power supply harmonics, meas. using automated data acquisition system 86−38219
industrial power supply networks, harmonic interference 87−21925
industrial process supplies using regulating autotransformers 87−22502
industrial productivity improvement, contribution of electrical systems 85−21971
industrial sources and loads, analog simulation using SPICE 87−22591
industrial thyristor controllers, control concepts *(German)* 88−64539
industrial transmission networks, harmonics and reactive power compensation *(French)* 85−38506
inertial power supply unit design for carrier-based aircraft 86−38907
instantaneous load breakdown simulator using arc generation 85−65331
instrumentation, wiring systems, suppression of lightning induced transient overvoltages 86−33497
insulation transformer for small accelerators, semiconductor technology appl. *(Slovak)* 85−65298
integrated, stabilized power supply for X-ray tubes 85−31772
integrated AC line monitoring in large computer power systems 88−55514
integrated cascade of photovoltaic cells as power supply for ICs 85−10960
integrated control energy management system. 86−33027
integrated design for optimum thermal, electrical and RFI charact. 85−39111
integrated power supplies, design trends and innovations of IC based systems 88−62473
integrated power supply design using uninterruptible battery back-up 88−62478
intelligent AC-DC source, standard for power meas. 87−3408
intelligent power room for telecommunication office 86−61631
Intelsat satellite power subsystem using solar arrays and Ni-H_2 batteries, control 85−48420
interactive power supply programmers 86−45496
Intercity Experimental high speed train for BRD, electrical equipment *(German)* 86−40227
intrinsically safe batteries 85−65418
intrinsically safe measuring and control circuits for explosive atmospheres *(German)* 85−54087
intruder alarms, operation, design, installation and servicing 85−49307
invertor sources of welding current *(German)* 87−9968
invertors as AC power sources for telephone company field crews 88−62456
invertors with bang-bang control, load conditions study *(Hungarian)* 88−62440
invertors with high-output, harmonic effects of feeder network compensation *(Hungarian)* 86−12890
ion laser power source, controlled, operating principle and charact. 87−9654
ion nitriding installations, power sources 87−9656
ion optical system, improved indirectly controlled isolated voltage sources *(Czech)* 86−57639
ion plasma coating appls. of power supply sources with metered energy transfer 87−9652
ion plasma coating deposition units power supplies 85−44092
IPNS accelerator system 88−54059
iron ore concentrating plants during power supply interruption, stability of technological processes *(Russian)* 85−5615
iron-free asynchronous machine and power supply modelling 87−22362
ISDN power supply using DC/DC convertors 87−30813
ISDN S-interface, Am7936, Am7938 subscriber and exchange power controllers 85−61185
ISDN system of Deutsche Bundespost, power supplies 86−61638
ISDN telephone set, supplementary equipment, power supplies 86−61639
ISDN with digital switching system, architecture and reliability of distributed power system 87−30826
ISDN-terminals at basic access, power supplies 86−59749
isolating and retaining bus information on extension units 87−4784
ITT 1240 for Norwegian telephone network, mechanical struct., buildings and power supply *(Norwegian)* 85−36858
Japan TELECOM, electrical power supply facilities *(Japanese)* 87−15851
Japanese National Railways' power supply system and plants 86−61789
JET, electromagnetic system, development 87−72274
JET, flywheel generator convertor system, design, erection, commissioning 85−5213
JET, flywheel-generator-convertor systems 85−49032
JET, high voltage grid interface, operational requirements 87−72280
JET, ICRF power plant, operation and development 87−72275
JET, magnet power supplies and plasma control systems 87−43194
JET, neutral beam injection and RF heating systems, power supplies 87−43195
JET, neutral injector auxiliary power supply system 85−49030
JET, power supplies, the first years of operation 85−39120
JET Additional Switching Network for poloidal field system, design and operation 88−63825
JET integrated power supply system, design concept, installation, commissioning 85−5211
JET magnet power supplies, current transducer performance in 4-100 kA range 88−69511
JET magnet power supplies, operation, reliability, improvements 87−72282
JET neutral injection 160 kV transmission lines, snubbers, SF6 tower 87−72291
JET neutral injection/RF heating power supplies, design 87−9677
JET neutral injector, power supplies, reliability and improvements, operating experience, fault anal. 88−69512
JET neutral injectors, power supply and protection system 87−72290
JET neutral injectors, power supply and protection system 85−49029
JET poloidal field power supplies, development to nominal flux swing capability 87−72279
JET poloidal field power supply system, operation and control 85−49031
JET tokamak, future AC and DC power systems 85−48561
JFT-2M poloidal field coils, power supply and control system 87−9678
JFT-2M tokamak, high-power mm-wave transmitter, power supply 87−74633
JT-60, toroidal field coil power supply, 4 GJ flywheel motor-generator 87−22543
JT-60, toroidal field power supply, tests 87−22544
JT-60 NBI power supply system 85−49038

power supplies to apparatus continued
JT-60 poloidal field coils, thyristor convertors, control and protection 85−5212
JT-60 power supply operational experience 87−72285
JT-60 prototype injector unit, voltage regulated GTO value 85−44111
JT-60 toroidal field coil power supply, DC output control 87−9675
JT-60 toroidal field power supply, rectifier, voltage regulation characteristics 87−22545
Just-In-Time manufacturing and inventory management techniques 86−19845
KEK 12 GeV PS, main ring magnet power supply, multiprocessor control system 88−53992
KEK e^+ generator, magnet power supply control system *(Japanese)* 87−14648
KEK electron linac, klystron modulator controller, design 86−55939
KEK GEMINI project, performance of prototype rapid cycling magnet and power supply 88−42392
Kepco switching power supplies (SMPS) *(Italian)* 86−40876
kicker magnet for SLC electron damping ring, power supply 88−54301
klystron, 1 MW, DC power supplies, TRISTAN main ring 88−55492
klystron DC power supply for Racetrack Microtron 86−26139
lab./benchtop power supply buyer's guide 86−61584
laboratory, power supplies, overview 88−30786
laboratory and OEM appls., DC supplies *(German)* 86−52654
laboratory and system power supplies, designs and cct. configs. *(German)* 86−711
laboratory power source on PCB, 0-50 V, 0-5 A *(Spanish)* 88−44048
laboratory power supplies, switching vs. linear regulators *(German)* 85−9988
LAK 500 microcomputer controlled power source for advanced arc welding 87−58495
Lambda Electronics, company and products *(French)* 86−13600
lamp voltage flicker limitations of electric utilities 86−6875
LAMPF II, magnet design and power supplies 85−26654
LAN, power conditioning and protection 88−15113
land-based oil and natural gas exploration power systems *(Croatian)* 87−51686
LANs, power problems and protection devices 88−59626
laser, gas discharge, power supply, electrical aspects 85−18982
laser diodes, power pack 85−51315
laser discharge impedance, effect on circuit design 88−20566
laser plasma tubes, power supply, push-pull DC-to-DC convertor 85−18039
laser power circuit modelling for particle beam fusion accelerator 88−24054
laser power supplies, smaller, better 87−75192
laser power supply, highly stable, for He-Ne laser *(Chinese)* 85−46435
laser power supply, large current rectangular pulsed *(Chinese)* 86−52641
laser power supply, pulse generator realisation using thyristors *(Dutch)* 88−27245
laser power supply, quasi-CW, using HF thyristor, for HCD laser expts. *(Chinese)* 85−29879
laser power supply for gas laser tubes, crit. mech. aspects 85−2375
laser power supply with thyristor three-phase-rectifier *(Chinese)* 88−56428
laser power unit 87−36990
laser pulse generators, scaling 88−20707
laser-diode power supply, design 87−31687
lasers, constant current sine wave switching power supply 88−70509
LC^2MOS linear compatible CMOS switch for power supply appls. 88−69505
lead-acid battery for telecommunications appls. 85−65435
LEP electromagnet, DC power supply circuit, prepolarised smoothing chokes 86−13984
LEP injection system, high tension burst pulse generator 87−43268
LEP power convertors *(French)* 86−11812
Lethality Test System EM launcher and power supply 87−26697
LF energy sources, appl. in prod. and testing of large electric machines 87−72143
LF synchronous motor as blower drive for blast furnace 86−33748
Liebert 3600A power line disturbance monitor 86−12519
lighthouses, power supply systems with reduced maintenance requirements 86−61586
lighting, benefits of electronic circuitry 85−60536
lighting flicker caused by supply voltage fluctuations, statistical anal. *(German)* 86−19600
lighting networks in factories, voltage and frequency fluctuation, cost effects *(Russian)* 86−57009
lighting of engineering plants, methods for reducing power consumption *(Russian)* 85−44301
lighting power facility maintenance evaluation index *(Japanese)* 86−51971
lighting power supplies, flicker compensation using VAr compensators *(German)* 85−49192
line disturbance effects and quality improvement 86−56402
line disturbance monitor, 4800 graphics environmental monitor 85−27135
line disturbances, effect on computer and power-line conditioner perform. 88−24071
linear accelerator power supply using unipolar rotary pulse generator 87−51362
linear and switching regulated power supplies, functional testing 86−20305
linear induction accelerators for industrial applications, pulsed power supplies 88−61010
linear power supplies, quality and reliability improvement 86−26184
linear PSUs−still a cost-effective solution 86−62424
linear stepping motor, control unit and power supply *(Russian)* 87−22418
linear supplies provide efficient power conversion 85−44087
liquid metal granulation, electromagnetic process computer control using specialised power supplies *(Russian)* 85−60578
liquid metal MHD homopolar generator, high pressure, gas driven, for nuclear fusion device 88−37302
liquid-fed ceramic melter for vitrification, 3 electrode power supply system *(Japanese)* 88−56321
Lloyd's Insurance building, London, power supply system installation 87−21910
Lloyd's Insurance market, design of new buildings electrical systems 87−21911
LM2984CT, interference-free microprocessor power supply system and voltage regulator *(German)* 88−44038
locomotive heating circuits, short-cct. protection of static freq. convertors *(Romanian)* 88−62700
London Underground, generating considerations for future power supplies 88−5978
LorTech Power system inverters placate power problems 88−24064

power supplies to apparatus continued
lost time and utilisation time, computerised calculation for industrial circuits *(Spanish)* 87−15253
low DC supply, EM meas. appl., calibrator circuit *(Polish)* 88−18918
low power, HV power sources, voltage stabilisation *(Russian)* 86−66161
low power supply meas. system 85−65007
low voltage analogue components on a digital CMOS process 88−13593
low-jitter trigger generator, command charging circuit 87−43275
low-noise AC/DC voltage source with continuous zero crossing 88−18921
low-power breakdown-free power supply installations, types and Merlin Gerin SX1500/2500 units *(German)* 88−17713
Luxomat 2001 and Debut 1001 monochrome sets, review *(German)* 85−42733
LUXOMAT VT 2001 TV receiver, mains power unit, fault finding *(German)* 86−65053
LV, switching transient mechanism 86−33521
LV fluorescent lamps, mains-fed 100 kHz driver modules using half-bridge cct. config. *(German)* 86−34505
LV halogen lamps driving, 100 kHz mains unit design *(German)* 87−23894
LV high-density power supply module 87−31719
LV house-consumption power supplies using alkaline NiCd storage batteries *(Czech)* 86−19375
LV industrial power supplies, protection against short circuits *(Russian)* 85−38556
LV installation power supply evaluation and demand forecasting *(Portuguese)* 87−51657
LV power distrib. networks for telecom. systems, EMC requirements and interference control 88−30856
LV power supplies for chem. plants, reliability and safety measures *(German)* 87−72639
LV switching mode power supplies, standard power supply program for military appls. 86−20306
M51977 MOSFET driver PWM control ICs for switch-mode power supplies *(Japanese)* 88−56448
machining plants, power supply disturbance, consequences appraisal using simplified model *(Russian)* 87−43694
MAGLEV linear synchronous motor supply, cycloconvertor construction and control characteristics 86−66441

off-line low power sources for remote and back-up operation, overview 87−42738
off-line power supply, control and regulation 2-chip set implementing safety standards 88−17744
off-line switching power supplies, testing HV transistors 88−75849
off-line uninterruptible power supplies for microcomputer 86−56822
office automation, safety testing of power supplies 87−15901
office LAN equipment *(Italian)* 87−62465
office lighting, wiring and remote control of electricity *(French)* 88−42843
office service outlet quantity and location guidelines 88−68929
office wiring, modern system design 86−56411
offline switched-mode rectifier, double forward converter using MOSFET switching, develop. 87−23927
ohmic heating power supply for HL-1 tokamak 87−15892
oil drilling and production platforms, offshore power system optimisation 86−45882
oil production platforms secure electricity supply *(Norwegian)* 87−9647
Oltronic 2 V converter for VLSI boards *(French)* 85−60277
on-card DC/DC power convertors, design and perform. study 88−62470
open coal pit, electricity supply and distrib., economics *(Croatian)* 88−49326
open-cast mining power supply vacuum switchgear *(Russian)* 86−19694
operational amplifier circuit for tracing V I-curves of regulated power supplies *(German)* 86−67046
operational amplifier power supply circuit using LM 325 voltage regulator 85−10971
operational amplifier rail voltage supply, voltage regulator configs. 86−27083
operational amplifiers, stability and appls. *(Spanish)* 87−5691
operational amplifiers ICs for +5 V power supply, low noise and high speed use *(Japanese)* 87−73285
operational experience with SLAC energy upgrade 87−35262
optical fibre fusion splicing, microprocessor controlled power supply and fibre manipulation 87−26059
optical submarine transmission system, FS-400 M power-feeder *(Japanese)* 86−11060
optical subscriber system of BIGFON, power supplies 86−61640
optimised class-e amplifier with load variation 87−73335
optimum power system, guidelines for development 86−20298
ore smelting furnace productivity improvement by LF power sources *(Russian)* 86−19650
oscillating circuit current supply with HV switches for laboratory *(Romanian)* 88−31983
outdoor transformer stations for extractive industry 88−11271
output regulators using magnetic amplifier control for switched mode power supplies 85−54659
overhead contact system for Danish State Railways main line electrification 87−72488
overhead telecommunication systems with optical fibres, solar cell power supply system 86−61438
overvoltage protection using semiconductor convertor 88−69619
overvoltage surge protection of remote control system power units *(Russian)* 86−32816
ozone generator power supply plants 86−47895
ozone reactors, fed from impedance-free and impedance-containing sources, elec. performance 85−5582
PABX equipment, power supplies 86−61620
PABX power system, current mode control using magnetic amplifier power switches 87−30815
painting by electrodeposition, supply source charact. 87−9966
parallel supply connections 86−26154
paralleled power supplies current sharing 86−52678
parametric stabilisers with small stabilisation current *(Russian)* 88−63501
Particle Beam Fusion Accelerator II (PBFA II), quality assurance of R&D project 87−21325
passenger aircraft entertainment system, reconfigurable connectorless power supply 87−77791
power supplies to apparatus continued
passenger train power supply from central busbar *(German)* 86−33801
PBX, IBM Series/1 processor-controlled, power distrib. bus 86−10909
PBX, power conditioners use 87−4816
PBX back-up power systems 88−24066
PCB mount DC/DC converters simplify system power distribution 88−18898
PCB mounting, power supply modules, surface mounted devices 86−57641
PCB stiffener with integrated power bus 86−53203
PCBs, power distribution and track routing 86−8575
PCI '87 conf. Munich, BRD (May 1987) 88−11598
PCM-480 line regenerators, remote power supply system design 86−34513
PCMS line system power supply *(German)* 87−76506
PEARL, expert system for power supply printed wiring board layout CAD 87−65735
peripheral storage devices with +5 V PLL supply, charge-pump summing network 85−561
personal stereo cassette player, 4.5 V regulated power supply design and construction 85−10958
phase and series cascade voltage regulator, static charact. and operating limits 85−39906
phase sensor power supply 87−78762
Philips power supply, construction, operation, and quality control *(Dutch)* 86−40877
Phobos spacecraft plasma spectrometer with solar power generator 87−77592
photomultiplier, HV ripple elimination using active filter 88−67728
photomultiplier, low-gain supply cct. with divider 88−50020
photomultiplier, with output voltage adjustment from 0.9 to 4 kV 86−13997
photomultiplier small-size regulated power supply unit 88−50017
photomultiplier supply instability reduction 87−59162
photon factory, magnets and power supply system 86−24938
photovoltaic applications in the oil and gas industryinstrumentation field 86−11402
photovoltaic diesel engine generator for power supply for microwave relay in France, optimisation and economics 87−30454
photovoltaic power generators for radio communication systems in Jordan 88−75520
photovoltaic power supply for UHF/VHF radio repeater base stations, Canada 87−30452
photovoltaic power systems, supplying brushless DC motors, for transport and desalting of groundwater supplies in Australia 85−32397
photovoltaic water pumps, performance, reliability and maintainability 87−9423
photovoltaic-powered ice-making machine without compressor buffer battery 86−45836
photovoltaic-powered submersible pump development with brushless motor 86−45359
piezoelectric ceramic transformer high voltage power supply 87−52374
plasma arc welding of Al, HF reversing switch 85−44358
plasma compression switches, explosive driven for pulsed power generation, modelling results 88−43304
plasma compression switches for explosive-driven magnetic flux generators, charact. study 88−43305
plasma emitter, with adjustable parameters 88−38386
plasma erosion opening switch, application to a nanosecond generator 88−24970
plasma erosion opening switch, fluid simulation of the conduction phase 88−30797
plasma gas heaters, power supply description *(German)* 87−78764
plasma opening switches on the pulse power generators Pollux and KALIF 88−30795
plasma vacuum opening switch at ILE, pulsed power compression research 88−30796
PLT, lower hybrid current drive, 2.45 GHz system 85−1238
plug-in SMPSUs suit 19 in rack technology 87−72252
plug-ins bring modular power to supply-system integration 87−78756
pluggable multilayer ceramic three-dimensional module power and signal distributionmechanism 85−54144
Poland, present status of telecommunication installation power supplies *(Polish)* 88−69510
poloidal coil power supply system, construction and design for JFT-2M tokamak 85−570
poloidal field coil power supply for JT-60, test 85−53767
polymer batteries, construction, electrochemistry, conductivity, automobile appls. 88−49255
portable cassette tape recorder, ICs operated by single dry battery 87−14037
portable HF oscilloscope, transformerless power supply design *(German)* 86−55764
portable lightweight transceivers, suitable power supply 85−60270
portable mining equipment, power supply from autotransformers 87−65028
portable product supplies using batteries and power convertors 88−62562
portable video power supply *(German)* 85−47712
portable VTR power adaptor-charger *(Japanese)* 87−36029
powder particles melting plant using plasma-beam technology, thyresch power convertor appl. 88−37759
power and signal earthing for control and computer rooms 87−21979
power audio amplifier for digital preamplifier, high efficiency design 88−29156
power conditioning, effects of power system disturbances 86−45588
power conditioning system using sliding model control 88−75771
power converters under unbalanced supply conditions, anal. 86−45573
power convertor circuits supplying electrotechnical plants, thyristors with damping capacitors *(Russian)* 85−44110
power convertors, polyphase, supply voltage perturbations, cct. reaction *(Russian)* 87−78759
power demand control for power saving in Japanese National Railways Nagano Factory *(Japanese)* 86−6855
power diodes for TFTR, thermal protection calc. method, junction temp. calcs. 88−63521
power electronics, conf., Kyoto, Japan (April 1988) 88−70010
power electronics, conf., New Orleans, LA, USA (Feb 1988) 88−49366
power electronics, trends of electronic switching elements *(German)* 87−10643
power electronics and appls. conf., Grenoble, France (Sept. 1987) 88−62899
Power electronics show and conf., San Jose California (Oct. 1986) 87−58536
power IC, TDA 4814, for sinusoidal line current consumption, appls. 87−516

power supplies to apparatus continued
power line conditioners and protective devices, safety considerations 85−21708
power line disturbance simulators 85−9554
power modulators, IEEE conf., Arlington, VA, USA (1984) 85−22079
power MOSFETs as switch mode power supply component 87−11817
power pack test system, computer-aided, realisation and flexibility 86−24337
power packs, Swedish invention, features and fields of application *(Swedish)* 85−553
power protection for telecommunication systems, overview 88−55482
power protectors for computer equipment 85−32241
power sources, conf., Boston, Massachusetts, USA (Nov. 1984) 85−27950
power station auxiliary grid availability improvement with or without gas turbine in combustion air circuit *(Dutch)* 85−65149
power station for Cuban sugar industry, turbogenerators, switchgear, boilers and power supplies *(German)* 85−32870
power supplies. Catching up with technology 87−36026
power supply units computer-assisted testing system *(German)* 85−39114
power transformers, rated power and load selection *(Russian)* 86−39902
power transistor base drive circuit using current feedback, SMPS appl. 88−13410
power transistors, doping and configurations for voltage and amperage improvement *(French)* 87−11738
power-line monitoring system, low-voltage conditions for computer power supplies 88−42901
PPChV single-phase HF converters for induction heating power supplies, parallel operation 88−24029
precision supplies for laboratory power 85−27499
primary and buffer two energy source installation, capacity calc., parameters selection 88−24032
primary power, alternative sources 85−32630
printed circuit mounted filters for controlling switchmode power supply emissions 86−52681
process computer no-break power supply selection *(Danish)* 86−12893
process control and electronic power systems for ULCO Cement Plant production line 86−19674
process control computers and distributed control systems, grounding practice and National Electrical Code 86−39953
process control installation, computer-assisted hardware planning *(German)* 88−42832
process heating power supplies, process/utility interface 86−71121
process heating using solid state power supplies with invertors, computerised control 88−69932
product report 87−30755
product safety standards for power supplies and EDP equipment 88−24509
programmable, computer programmed power controller using the General-Purpose Interface Bus 86−51781
programmable controller and distributive controlinstallation practices 86−6917
programmable DC power supplies 86−34506
programmable hearing aid using CMOSICs 88−74886
programmable photomultiplier power supply 86−27817
programmable power supply interface with GPIB/RS232 86−39974
programmable power supply module, review *(German)* 86−20292
programmable PSUS speed up using IEEE488 87−63222
programmable voltage source, design *(German)* 85−54666
programming enhancement via general purpose interface bus 86−53094
proportional drive for discontinuous modeDC-to-DC convertors 85−61113
protection and monitoring of HV equipment, circuit breakers using microprocessors *(Swedish)* 87−64741
protection by residual current devices 87−72315
protection of computer in arctic conditions, data gathering and transmission system *(Finnish)* 87−34132
protection of power supplies for electronic equipment and computers 86−70979
protective multiple earthing for public mobile radio base stations 88−28746
Proto II accelerator, low inductance diode design for imploding plasma loads, insulator breakdown 87−22627
PROTO II crossover network, time domain reflectometry meas. 87−22620
pseudo-spark switches, high repetitive rate, for laser applications 88−20706
PSU reliability, manufacturing and field studies 87−44529
PSU standards, rationalisation 85−16106
PSU standards, specification guidelines for obtaining approvals 88−62475
PSUs−major expansion in specialist market 86−62425
PTC resistors as high power pulse switches 87−52893
public electronic switching systems, central uninterruptible supplies 86−39943
pulp and paper industry, power supplies and control, TAPPI conf., Boston USA (Sept. 1984) 85−16578
pulp mill and board machine for Duplex packaging board manufacture, power supplies 87−22942
pulse charging circuit, prototype for electrostatic levitation 85−27543
pulse forming network of low inductance and large energy storage density for laser 88−24056
pulse generator for powering semiconductor light emitters 85−22709
pulse generator inductor, power input *(Russian)* 86−62492
pulse generator supply for CO_2 laser 87−2224
pulse power electronics, markets, device testing 88−70552
pulse power for lasers, conf., Los Angeles, USA (Jan. 1987) 88−18297
pulse power generation, ion beam focusing for ICF appls. 88−62487
pulse power generation, plasma channel stability for ICF appls. 88−62488
pulse power generation using laser driven implosions, dynamics study 88−62497
pulse power modulation, history 87−43265
pulse power source for tacitron photomultipliers 86−40900
pulse power sources with capacitance energy stores, three criterion optimisation 87−5714
pulse power sources with two-stage periodic-action thyristor commutator 88−55434
pulse power supplies for injection lasers 87−65831
pulse power supply cables, development, terminations and appl. 85−59735
pulse power switching, nonlinear positive temp. coeff. resistor eval. 87−22624
pulse supply circuits for electrostatic precipitators, anal. *(Russian)* 87−10653
pulse-excited sinusoidal current source for nonlinear ohmic-inductive loads *(German)* 85−33625
pulse-frequency modulation of DKsSh DC arc lamps 87−52361
pulsed arc welding process control by IBM PC 88−6069
power supplies to apparatus continued
pulsed current welding simplification by synergic machines 86−33881
pulsed gas lasers, compact regulated 5 kW power supply 87−68564
pulsed high power high tension voltage source with inductive energy storage 87−15890
pulsed homopolar generator power supply design for high current laboratory 85−5245
pulsed laser power supply, predischarge voltage stability increase 88−63516
pulsed power, conf. Albuquerque, NM, USA (June 1984) 85−22
pulsed power and target implosion, conf., Yokohama, Japan (Sept.-Oct. 1987) 88−55847
pulsed power devices, transient mag. field, 3-dimens. finite element anal. 85−27515
pulsed power for high power electron-beam pumped lasers 88−24055
pulsed power for repetitively pulsed high-power discharge lasers 88−24053
pulsed power generation, explosive flux compression using laser irradiation ignition 88−62491
pulsed power generation, ICF simulation codes for radiative energy transfer 88−62489
pulsed power generation, ion beam expansions in ICF 88−62496
pulsed power generation, numerical anal. of target implosion and ignition 88−62484
pulsed power generation using explosive current peaker wires, commutation tests 88−43307
pulsed power generation using ion beam ICF, numerical anal. of target implosion 88−62490
pulsed power generation using laser diodes, EM field study 88−62485
pulsed power generation using plasma erosion switches 88−43303
pulsed power generation using rotating ion beams, kinetic theory anal. 88−62486
pulsed power generators, explosive flux compression modelling 88−62492
pulsed power generators, sub-ohm, coaxial, 0.2 to 1 TW, design and development 85−5247
pulsed power module, two-stage, magnetically switched, Comet II, for coaxial mag. switching expt. 85−27526
pulsed power sources, flashover ion diodes with cryogenic anodes 88−62500
pulsed power supplies, capacitor and inductor linking and pulse generation 85−39105
pulsed power supplies for industrial electrostatic precipitators 86−40961
pulsed power supplies for synchrotron kicker magnets of Spallation Neutron Source 85−27523
pulsed power supply, high power, for proton synchrotron 87−15913
pulsed power supply for discharge excited excimer laser, techniques and development 86−58891
pulsed power supply for RAPIER B amplifier KrF laser system 85−5255
pulsed power supply for semiconductor laser array using MOSpower switching transistors 86−57629
pulsed power supply with travelling wave charging for PBFA-II accelerator 85−27524
pulsed power systems, current sensors calibration 85−5243
pulsed power systems with synchronous machines, reactance anal. 87−22313
pulsed power technology, anode plasma behaviour in pulsed ion diodes 88−62498
pulsed power welding, system operation and advantages 85−22018
pulsed secondary electrical-supply source modelling *(Russian)* 87−64702
pulsed supercond. magnets, 3 MJ and 4 MJ, energy transfer expts. 85−56251
pulsed UPS system with high short circuit currentcapability 85−65346
pulsed voltage generator for electron gun, parameter improvement using H tiratron *(Bulgarian)* 88−5782
pulsed-power applications, numerical simulations of MHD and plasma processes 88−37318
pulsing, impact on electrostatic precipitator performance 86−29317
pump-lamp power supply for Nd:YAG laser 87−26362
pumping excimer lasers, using solid-state magnetic switching exciter 86−15749
pumping stations, of crude oil pipeline system, upgrading of electrical and control facilities 85−16539
purchasing considerations in power supply technology 87−10674
purchasing power supplies 87−72227
push-pull switching transformers, electronically controlled *(German)* 85−40207
PWM inverter and chopper using GTOs in dual thyristor operation 88−69573
PWM inverters with GTOs, design 86−12933
PWM invertor, deadbeat microprocessor control for sinusoidal output waveform synthesis 86−12918
PWM resonant converter for high-output voltage power supply, design 88−24038
PWM resonant converter for HV power supply, design 86−45568
pWM-FM 140 watt 100 kilohertz multiple output offline switching power supply 87−78812
quadrupole pulsed power supply for a GS polarized proton project 85−27525
quality of power, site surveys, disturbance monitoring, equipment 87−72267
quality of power supply at outlets, transient overvoltage causes and preventive measures *(German)* 87−36035
quality problems, disturbances and countermeasures 86−44885
quasitriangular current pulses supply for betatron magnet 86−18210
Rabenstein hydroelectric power station, elec. and mechanical auxiliaries *(German)* 88−23780
rack mounted battery power for telecom. systems using Pb-acid cell 87−30822
radar-system ground-loop problems reduced through single-power-supply data converter 87−70136
Rade Koncar HV regulated rectifiers for electrostatic precipitator power supplies *(Croatian)* 88−30810
radio equipment, regulated power supply 88−24955
radio equipment supply, 13.8 V 20 A 86−57635
radio relay equipment power supplies, natural sources *(Hungarian)* 88−62443
Radio Shack Model 100 remaining battery charge meas. and display 87−70732
radio stations, design *(Spanish)* 86−19389
rail guns driven by helical flux compression generators 88−40511
rail transit systems, electrical energy cost reduction methods 86−66461
railgun energy source, pulse forming network 87−47127
railgun power supply system utilizing traction motors and vacuum interrupters 87−22621

power supplies to apparatus continued
railguns powered by explosive driven flux compression generators 87−26673
railway air-conditioning systems for passenger trains, trends *(Japanese)* 88−5954
railway distribution substations, power distribution sequential controller replacement *(Japanese)* 86−66117
railway electric demand/supply control, office automation *(Japanese)* 86−66411
railway electric snow melting apparatus, power consumption economy using telecontrol *(Japanese)* 86−7229
railway electrification project, New Zealand 85−65499
railway flashing light units, solar panel power supply config. *(German)* 87−42721
railway LV supplies using auxiliary static convertors *(Spanish)* 85−49018
railway passenger coach central power supply system *(German)* 86−33799
railway passenger vehicle air conditioning and auxiliary power supplies 87−79148
railway power supply, computer aided switching and tunnel section adapted control, Munich *(German)* 86−66432
railway power supply installations, computer-aided maintenance *(German)* 85−65492
railway power supply protection and automatic devices *(Hungarian)* 87−72497
railway signalling equipment, power supply plant for Yugoslav railways *(Croatian)* 88−31127
railway signalling power supplies *(Japanese)* 86−66452
railway substation installation in narrow urban district *(Japanese)* 86−66118
railway traction power supply, Swiss Federal Railways in 1985 *(German)* 86−61782
railways, electric snow melting heaters, controller utilisation for energy consumption reduction *(Japanese)* 86−66414
railways, electrification of New Zealand North Island route, system design considerations 88−5985
raster scanning power supply system for relativistic heavy ion beam control, radiotherapy appls. 88−55486
RCF hydrostatic superimposed gear unit for ship's power supply from main engine 88−11305
reactive power compensation for supply networks with arc furnace disturbances *(German)* 86−39124
reactive power compensation using parametric current sources *(Russian)* 88−75043
reactors for reactive power compensation of 6-10 kV industrial power supplies *(Russian)* 85−27474
read/write head error monitor circuit 85−50835
real cost of overspecification of power supplies 85−28365
rectifier final control elements, EM compatibility *(German)* 86−26237
rectifier for mobile telephone systems 86−45523
rectifier transformer design criteria 86−56849
rectifier-exciter in independent supply system, reverse voltage study across diodes *(Russian)* 86−61608
rectifiers, controlled, for power supplies to plants with low differential load resistance 87−9661
reduced frequency power sources for industrial ore-reduction furnaces, regulation characts. 87−9655
redundant power sources for computer, test and communication equipment 86−26182
redundant power supply system using independent freq. convertors *(Russian)* 88−55426
regenerated solar arrays, efficiency after laser annealing 85−48381
regulated current supply for superconducting solenoids 86−13999
regulated HV supply for backward-wave tubes 86−57633
regulated inductive store energy conversion efficiency 88−69720
regulated linear power supplies and unregulated DC-DC convertors, book 88−31349
regulated power supplies for slow-electron diffractionanalyzer 86−13998
regulated power supply for linear and digital ICs and low-power transceiver 87−44526
regulated power supply for wire broadcasting transistor amplifiers 87−64687
regulated power supply units switching for electronic systems *(Japanese)* 85−21719
regulated supply for He-Ne/$^{127}I_2$ laser 87−59163
regulated supply for image convertor, 300 V to 20 kV 86−57632
reliability and choice of power supplies for specific applications 86−26186
reliable design principles for reduced cost 88−30921
reliable military power supplies 85−9978
reluctance generator system for vehicles, ships and airplanes 87−4686
reluctance machines, current supply optimisation *(French)* 86−19243
remote control system for power facilities for Tsugaru Strait railway line *(Japanese)* 87−5003
remote hybrid power systems for telecommun. 87−43215
remote telecom. equipment, power sources 87−43186
remote telecommunication systems, diesel engine generating systems 86−61645
remote UHF repeater, solar-powered 85−65179
renewable energy sources for telephone power supplies, with computerised control and supervision 86−61212
repetitive energy transfer circuit, computer model 87−30781
repetitive pulse power component technology advances 87−43266
requirements study, DIY 87−35688
reserve telephone power, economics 86−61634
resistance regulated arc furnaces, modelling of electrical characts. and parameters 85−32803
resistance thermometers with thermistors and Wheatstone bridges, supply voltage changes compensation *(Rumanian)* 86−31392
resistance welding microprocessor control device feeding three single-phase transformers *(Spanish)* 87−79246
resonant power converter switching mode power supplies, anal. 86−7992
restaurants, energy use study 86−40361
reverse conducting fast switching thyristors in industrial high power series resonant circuits 86−61653
reverse-field pinch reactor, power supply system 85−49036
RF linear amplifier, power supply, VK Powermaster, 13.8 V, 14 A, design, construction and short-cct. protection 85−10966
RFI from DP equipment, French regulation proposal *(French)* 87−19214
RFX fusion expt., Italy, design criteria for switching units 87−22606
RFX fusion expt., Italy, power supply protection against plasma disruption and fault conditions 87−22607
RFX fusion expt., multiconvertor supply system, steady state anal. 85−5210
power supplies to apparatus continued
RFX machine-supply system anal. 87−15897
RFX power supply, protection and switching system 87−72276
rice milling, economical comparative study between different energy sources 86−61831
Rifa distributed power supply using DC/DC convertors 87−44537
ripple ALU, selective powering for improved power performance 85−33783
robotic arc welding of thin sheets, electric current control 85−27881
robotic assembly 86−51747
rotary power conversion, use in power protection 87−9680
rotary UPS equipment, design advances, improved capabilities 85−9983
rotating electric machines for use in pulsed power supplies 85−5060
rural distribution networks, effects of cyclical mining loads using thyristor bridge rectifiers 85−43593
rural power sources for telecommunications 87−51083
rural telecommunications, solar power systems 88−43378
rural telecommunications power supplies 88−43258
rural telephone exchanges, power supply requirements 85−5201
safe communication, signalling and control systems in coal mines 86−30272
safe power supplies for amateur radio 87−4811
safety, standards and certification 86−46548
safety and emergency light systems, battery operation *(German)* 87−79197
safety lighting with battery power supplies, operation and circuits *(German)* 85−16411
safety lighting with central battery *(German)* 86−45810
safety requirements for uninterruptible power supplies 87−36044
satellite communication systems, DFS-Kopernikus satellites, technology *(German)* 87−76667
satellite Earth stations AC power systems, British Telecom International operational experiences 87−30827
satellite power supplies, DC/DC invertors for AC power distribution 86−12116
satellite power systems, lifetime extension and weight reduction considerations, developments *(Japanese)* 87−8962
Schottky power diodes save ICs from early death by preventing power supply turn-on delays 86−34508
Schottky power rectifiers for LV switching power supply appls. 87−30850
sealed Pb acid batteries for public switched telephone network and PABX 86−61716
secondary regulation using saturable core magnetic amplifier *(French)* 88−11283
secure power supplies, safety and maintainability requirements determ. using Markov model *(Russian)* 85−43572
See-Through Amorton, for translucent amorphous silicon solar cell 87−72397
selection, standard or custom built 87−43185
selection of power supplies for development of electronic apparatus *(German)* 85−33629
self oscillating power supply using EDT34 transformer and 3C85 ferrite material 87−44559
self-acting supply isolation for elec. current shock protection *(Polish)* 88−69051
self-contained relays, full power requirements of power sources *(Russian)* 88−30805
self-oscillating inverter for switch mode power supplies 86−27068
self-oscillating power supply using new two-part coil former and ferrite material 87−23920
self-oscillating secondary power supplies, effective starting up method 86−34511
semiconductor converter based power sources for industrial electrical process installations 86−45856
semiconductor convertor based multiply-coupled power supplies, anal. *(Russian)* 85−65325
semiconductor developments affecting power supply design 86−20302
semiconductor device fabrication/testing, power conditioning productivity-enhancing effects 86−49939
semiconductor injection laser supply, high-current pulse modulator design *(Polish)* 86−737
sequential mine conveyor systems, power demand, probabilistic model 86−32695
series resonant based invertors for aerospace applications, generalized control and protection 85−49027
series resonant invertor technology for high power, HV power supplies 86−26179
series resonant power supply converters as pre-conditioner converter, mains/line pollution problems solution 87−51369
sewage treatment plant and pumping stations in Libya, electrical and control systems 86−33889
shielded superconducting energy storage for poloidal coil power supply 85−5217
Shinkansen electric power control system 85−65497
Shinko HF pulse arc seam welders *(Japanese)* 85−32851
Shinko superconducting coil and pulse power supplies for universities and research institutes *(Japanese)* 85−32580
shipping on-board elec. equipment, power supplies for facilities 88−18149
ships, IEEE recommended practices for electrical installations and automatic control systems 85−49171
ships, Royal Princess cruise liner, propulsion, power generation and power supplies 85−16298
Shlobin (USSR) compact smelting plant power supply facilities 88−6063
shock wave-explosive energy generator of PZT ferroelectric ceramics 88−49057
short-pulse explosion-driven generator, conceptual design and cct. model 88−43296
Si9100, power IC for design of 80% efficient one-watt power supplies 88−7703
Siemens SMS system elec. supply to and interconnection of office equipment *(German)* 88−36824
Siemens supplied power supply system for Tomago aluminium smelter 85−60592
Siemens SV6 range, mainframe power supplies, thermal, elec. and RFI characts. 85−39121
Siemens Transdata communications processor power supply design 86−61627
sine-wave and square-wave power supplies for arc welding, reignition characts. 88−11522
single electrical sensor supply wire cross-section calc. *(Russian)* 86−18830
single phase leakage current anal. *(Russian)* 85−16115
single-armature clutch-brake using over-excitation power supply 88−31128
single-cycle voltage converter, design 88−11285

power supplies to apparatus continued
single-phase transformerless power supply for pulsed laser 88−63515
sinusoidal voltage source, control of current taken by noninductive load *(German)* 88−17717
SIT resonant HF invertors, induction heating appls. 88−69525
Skoda universal electric locomotives for AC and/or DC power supplies 85−49155
slabbing mill main drive motor supply capacity improvement *(Russian)* 86−19649
SLAC linear collider, modulator system and power supply 87−51359
sliding-contact overhead track and conductor rail supply *(Italian)* 85−61508
small power supplies, trends *(Japanese)* 87−43211
small-scale source of secondary electric power supply for 60 volt direct current mains *(Russian)* 85−10012
smartpower devices for easing power loads interfaces 88−7702
smartpower for small telecomms systems 87−72256
SMARTPOWER integrated circuits for switchmode power supplies 87−51367

ferroresonant circuit, output voltage holding characts. *(Japanese)* 85−49736
ferroresonant circuit current supply unit modification *(Russian)* 88−560
ferroresonant convertor for constant current source conversion to stabilised voltage source *(Russian)* 85−49738
FET generator for US piezoelectric transducer 88−12207
filament lamp continuous dimmer circuit harmonic characteristics *(Japanese)* 87−43634
finite output resistance power supply design, switched-mode 85−10992
firing angle control and alternative power circuits for HVDC convertors 86−12904
flash lamp power supplies for laser pumping 87−64705
flight of stairs power supply for pulsed solid laser continuously adjustable voltage *(Chinese)* 86−9903
flux-stabilized spectral source of wavelengths from 0.25 to0.5 μm 86−7290
flyback converters for power supplies to low power circuit 85−39905
flyback convertor anal. *(German)* 85−61076
flyback convertor SMPS, 10 W, control and protection using TDA 4814 IC 88−75730
flyback power supply with no oscillation, servicing procedure *(German)* 85−54644
flywheel recovery diode, struct. and characts. for HF switching power supplies *(Japanese)* 88−39366
FM regulated power supply, VHF switching, design and operation 85−49737
forced commutation topologies in thyristor chopper circuits 88−43322
forced-commutation circuit inductor and transformer specification and design 87−31722
forward convertor, adjustable reset voltage cct. 87−5670
forward DC/DC convertors, surge and noise generation anal. 85−577
frequency converters, analog-digital control *(German)* 86−40886
Functional Electronics, book 85−22157
functional testing of completed power supplies 88−32007
galvanically isolated switching supplies provide high power 88−18897
gas-discharge displays, Townsend discharge memory panel for colour TVs 87−8688
glitch catcher and line filter for power supplies 85−22635
grid analysis equipment *(Spanish)* 87−52328
ground and power distrib., design for EMI/TEMPEST control 87−59180
GS-R400 switching regulators, variety of protection features simplifies supplydesign 86−7956

power supply circuits continued
GTO thyristors, test-and-drive cct. 86−727
half-bridge convertors operation with current mode control, runaway conditions prevention 88−38379
half-bridge parallel resonant convertor, anal. and design *(Chinese)* 87−73302
half-wave DC voltage converter 87−44543
harmonic disturbances effect in supply *(Spanish)* 87−52327
heat sink config. satisfying miniaturisation and thermal protection criteria *(German)* 88−43706
heat sinks design 86−738
Heathkit HF linear amplifiers, modifications 88−38391
Heathkit SB-200/220 linear amplifier power supply improvement 87−65800
heavy current switchboards, power electronics and control *(Czech)* 86−71001
HEXFETS improve switch-mode power supplyreliability 85−54653
HF AC link PWM invertor 85−10025
HF AC power supply unit for capacitor HF ripple load test equipment *(Japanese)* 88−38784
HF DC-DC convertor based on parallel resonant bridge invertor, design 87−31716
HF electric process heating, efficient power source 87−72588
HF high-efficiency power supply development, advances in device technology 87−31715
HF induction heating power supply using power MOSFETs 87−36960
HF linear amplifier with separate PSU, G3ISD, low-cost construction 86−62461
HF losses in multiturn foil-wound air-cored inductors 87−26632
HF power conversion, conf., San Diego, CA, USA (May 1988) 88−70012
HF power conversion, conf., Virginia Beach, VA, USA, 1986 87−31152
Hf power convertors using fast recovery rectifiers 88−70546
HF power source using cycloconvertor, operation limit and power source side charcts. 87−51336
HF power supplies using hybrid IC technology 88−70542
HF power supply implementation technology *(French)* 88−6647
HF power switching, effective inductance of gapped ferrite cores calc. 85−61104
HF SMPS, elimination of leakage effects related to the use of windings with fractions or turns 85−572
HF SMPS, output filter capacitor appl. and mounting 88−70510
HF SMPS using bipolar and MOSFET switches 88−69594
HF supply from DC/DC resonant forward converter, appl. in distributed power systems *(Chinese)* 87−73319
HF switched mode PWM power convertors for supply appls., state-of-the-art review 88−69593
HF switching power supplies, transformer computer design aid 85−571
HF switching-supply, appl. of magnetic materials in transformer cores 87−38664
HF thyristor converters for electrotechnology, power circuit selection 88−24033
high current power semiconductor modules, cooling, factors and computer aided anal. 85−54149
high efficiency, 12-kW switched mode power supply operating on the 440-V mains 85−33661
high frequency transistorized induction heating power supply, computer simulation 88−6659
high voltage capacitors for microwave ovens *(German)* 86−33577
high voltage/high current IC technology 86−708
high-frequency, low volume, point-of-load power supply for distributed power systems 88−24972
high-frequency high-density converters for distributed power supply systems 88−56454
high-speed AC power clock for Josephson logic circuits 87−66288
high-voltage transistor converter for pulsed X-ray sources 87−37608
home made equip. 86−67025
horizontal scanning ccts. *(German)* 88−9715
HV, high power switched MOS transistors for transformerless power sources *(Russian)* 86−41783
HV AC power supply with variable frequency output, 0.5 to 10 Hz 85−32602
HV aerospace circuits, testing and failure analysis 85−31898
HV bipolar transistors for mains supply ccts., selection criteria *(German)* 86−35653
HV circuit breakers, UKP-220(380) power supply units, ballast resistor selection *(Russian)* 87−15855
HV electrometer follower, with floating power supply 87−21017
HV electron gun with grid control supply power supply system 86−20285
HV failure anal. and materials eval. for power supply circuit testing 86−20308
HV nanosecond pulse packets generator 87−59164
HV power supply design, packaging and testing techniques 87−10677
HV pulse supply, compact design 85−22657
HV solid-state power supply with current stabilisation, CO_2 CW lasers appl. 87−75185
HV stabilised source of charging voltages 85−22655
HV supply for backward-wave tubes, regulated 86−57633
HV thyristor commutator with optoelectronic control 86−40901
HV thyristor-transistor commutator 87−16865
HVIC for power supply appls. 87−44579
HVIC MOSFET driver for power supply appls 88−75812
hybrid circuits, thermal study using Napom software package *(French, English)* 88−56433
hybrid thick film power supply ccts. 86−702
IC for 120/240 V AC line input 87−65847
IC power input protection cct. 85−44882
IC power net sizing, nonlin, separable fn. minimisation 88−43996
IEEE standard for ferroresonant voltage regulators using transformers 85−39927
in-circuit process testing for power supplies 86−20304
in-circuit test and function test *(German)* 86−67006
indirectly controlled isolated voltage sources for ion optical system power supply *(Czech)* 86−57639
induction smelting cct., spectral analysis, output envelope of narrow-band modulated filter 87−45004
inductorless battery feed circuit 88−24986
initial power on reset circuit, design and operation 86−7941
injection converters for low voltages 87−514
inrush current suppression cct. using zero cross detector *(Japanese)* 88−24987
inrush limiter for bridge rectifier for switched-mode power supply 85−11006

power supply circuits continued
inspection with automatic test system 86−46541
integrated micro-assembly for controlling the switch voltage regulator MO82EK1 used for pulsed power supplies *(Russian)* 87−44552
integrated power module for compact power supplies *(German)* 86−34504
integrated power supplies, design trends and innovations of IC based systems 88−62473
integrated power supply design using uninterruptible battery back-up 88−62478

pulsed current supply for IMPACT diodes 86−67023
purchasing considerations in power supply technology 87−10674
push-pull current-fed DC-DC converter, smoothing capacitor effects 87−52334
push-pull DC/DC convertor, transformer magnetising current effects on dynamic characts. 85−576
push-pull driver with underlap 85−39919
push-pull power supply ccts. using cascode connected convertors *(German)* 88−63494
PWM control techniques for rectifier filter minimization 85−5259
PWM HF high power converter module, 3 kW, 1 MHz, circuit features 88−75745
PWM ICs for power supply control, product developments *(German)* 87−23899
PWM motor controller with intelligent power supply 87−51164
PWM switching power supply for video appls. 86−7923
quality control of manufactured power supplies using in-circuit testing 85−28073
radio equipment, power supply output regulator 86−34501
radio equipment home manufacture 86−17204
radio equipment supply, 13.8 V 20 A 86−57635
RAM, backup power from capacitor, cct. 85−10979
RAM back-up, Li battery vs. NiCd accumulator *(German)* 88−63491
RCA 723 regulated power supply chip *(Spanish)* 86−40906
real cost of overspecification of power supplies 85−28365
rectifier diodes for switching power supplies, optimisation 85−28358
rectifier-controlled DC power supplies, unified modelling 86−56832
rectifiers, synchronous, appls. in power converters 85−39900
redundant power sources for computer, test and communication equipment 86−26182
redundant power supply technique 86−719
reference-voltage supply 87−65835
regulated, feedback cct. improvement 86−7939
regulated, for microcomputers *(German)* 85−61079
regulated 10 A power supply 85−54638
regulated bipolar 0 to 200 kV supply 88−31998
regulated DC/DC power convertors, worst-case compensation networks CAD 85−6155
regulated high-voltage supply running from a battery using the voltage multiplier principle producing 100 V output 85−11005
regulated power supply, construction 88−24955
regulated power supply, saturable reactor cct. config. *(German)* 85−33634
regulated power supply considerations for 0 to 22 V, cct. 85−10973
regulated power supply developments, control ccts., dynamic response and transfer functions *(Italian)* 85−17135
regulated power supply for linear and digital ICs and low-power transceiver 87−44526
regulated supply with variable output voltage of 300 V to20 kV 86−57632
regulation with microprocessor, 1st, 2nd and 3rd order systems modelling *(Spanish)* 86−7954
regulator design methods 87−65837
regulator IC components for power supplies 85−10977
relative frequency monitor for mains voltage *(German)* 86−27055
relay hold current generating cct. 85−49712
relays, current reduction holding circuit *(German)* 85−11633
reliability test programme effectiveness and return on investment 86−168
reliable design principles for reduced cost 88−30921
reorganisation of power supplies *(Dutch)* 85−49744
repetitive railguns, circuit considerations 87−39341
reservoir capacitors and Zener diodes, construction details 85−49745
reset circuit 85−54635
reset circuit for microprocessors 86−57622
resistive transducers bridge cct., single supply design monitored by instrumentation amplifier 86−13966
resonant DC/DC convertors, zero-voltage switching and zero-current switching design 87−73325
resonant DC/DC power convertors, zero-voltage switching, energy conversion boundary calc. 87−73326
resonant inductor for VHF power supply 86−46545
resonant power converter switching mode power supplies, anal. 86−7992
resonant zero-voltage-switching DC/DC power convertor, state-plane analysis 87−73324
resonant-mode controller runs switching supplies at 1.5 MHz 88−56432
RF power conversion techniques 86−40895
ringing choke convertor, anal. 87−65807
ripple and transient analysis *(French)* 86−7932
ripple regulator power supply, low-cost design 86−40890
safety, standards and certification 86−46548
sampled data modeling for power electronic circuits 86−52662

power supply circuits continued
Scott convertor, 400 Hz, 2.5 kVA, interface suppression *(French)* 86−13985
SCR inverter circuit 86−27061
SCR preregulator for variable power supply 85−17131
secondary cycled power supply, timing cycle for current determ. *(German)* 86−46543
secondary power supply systems and sources for radioelectronic devices, CAD *(Russian)* 87−23914
selection criteria, appls., and terms *(German)* 85−61077
self-contained power source for direct current, current regulator and liquid-metal switches *(Russian)* 87−59165
self-isolating phase cutoff circuit 87−23906
self-oscillating inverter for switch mode power supplies 86−27068
self-oscillating secondary power supplies, effective starting up method 86−34511
self-oscillating switched mode power supply using a low-loss ferrite transformer *(French)* 87−44535
self-oscillating switching regulators, nonlinear loop compensation 87−36980
semiconductor device fabrication/testing, power conditioning productivity-enhancing effects 86−49939
semiconductor devices of high power for high efficiency power supply system 85−12264
semiconductor switched mode power supply from Brown Boveri *(German)* 87−23901
semicustom cell-based system 87−73274
SEMINET power circuit anal. program including numerical semiconductor device models 86−7906
SenseFET linear power supply 88−31994
sequential calculations for formulating models of power supply circuits and distribution networks *(Russian)* 85−15586
sequentially timed current-switch phase-modulatorcontroller with DC output 86−34516
series regulated high current stabilised power supply *(German)* 86−67005
series resonant power convertor, reduction of operating freq. range *(Japanese)* 86−27078
series resonant power supply 200 kHz, design *(French)* 86−46536
series-resonant, tap-changing as fast and efficient method of power control inhigh-frequency inverters 85−54677
series-resonant convertor design with normalised state-plane diagram 86−52647
SI7660 and SI7661 IC voltage convertors *(Italian)* 86−13978
Si 7660, CMOS voltage doubler IC 85−28357
Siemens power supply modules for printed circuit board assembly 87−36997
signal monitoring on current loops *(German)* 86−62431
Single chip checks resistance 86−40879
SIPMOS technology, AC contact and intelligent power switch with self protection *(Danish)* 87−10658
SIPMOS transistor feed supply without transformers *(Italian)* 85−6149
SIPMOS transistor power supply circuits, linear paralleling 86−34527
SIPMOS transistor-based stabilised voltage source *(German)* 85−6144
SIT switched-mode power supply with reson. energy transfer links 85−39915
SITAC used for automatic voltage switchover from 110 to 220 V 87−52368
slide projectors power supply *(German)* 87−52345
slim supplies switch at zero 87−44538
smart power circuits save vehicle cabling *(Swedish)* 88−18187
smart power ICs testing, ATE selection, effectiveness efficiency 88−22448
smoothing circuits using emitter follower 85−33654
SMPS, 12 V, for mobile transceiver 86−14004
SMPS, cascode-driven with HV Darlington transistors 88−63488
SMPS, current-mode control using current sensing HEXSense power MOSFETs 88−24978
SMPS., design considerations 88−12182

switching power supply using HF magnetic amplifier with amorphous saturable core 87−44570
switching power supply with stepping motor driver *(Japanese)* 85−39029
switching power supply with switching convertors, elec. and magnetic circuit interactions 87−44568
switching power-supply regulator ICs 87−73275
switching regulator compensation network, design optimisation 88−70533
switching regulator ICs *(German)* 86−27053
switching regulator magnetic snubbers using amorphous saturable reactors, amorphous beads 88−55511
switching regulator power supply transfer functions, calculation by computer 86−14005
switching regulator soft start cct. 87−5669
switching regulators, current mode control 85−6162
switching regulators using digital modulator, loop gain meas. 85−5260

power supply circuits continued
switching supplies for gas-discharge tubes and CO_2 lasers *(German)* 85−49726
switching time reduction using transistors and Darlingtons *(German)* 86−714
switching type power supply regulators with sinusoidal current input, anal. *(German)* 87−52383
switching-power supplies, protection circuitry elimination 85−22641
switchmode power convertors, generalised use of integrated magnetics and zero-ripple techniques 85−6166
switchmode power supply, 120 VA 85−61068
switchmode power supply transfer determination using SPICE-2 85−574
symmetric current-programmed DC/DC convertors, aux. ramps for saturation prevention 85−578
system component design *(German)* 88−50009
systematic electronics, book 88−24388
TEA 5110 twin-voltage regulated supply unit for microprocessors *(German)* 85−61078
telephone set, regulated power supply 86−10855
telephone subscribers in Japan's Information Network System, power feeding 87−59169
test equipment evaluation pitfalls 87−8652
test equipment sophistication trends 86−27058
testing automation, trends and tradeoffs 85−61072
thick film hybrid miniaturised modules improve power supply design 85−17146
thick film power hybrids for high density appls. 85−34404
Thomson integrated circuits for colour TV and VCRs *(German)* 87−70197
three-phase networks voltage asymmetry meas. , correlation method, error analysis 88−74543
three-rail power supply uses four diodes 86−20246
Thurlby/RS 15V/4A bench power supply 87−63451
thyristor circuit modelling using SPICE simulation package 88−50024
thyristor convertors using split-phase thyristor control IC TCA 785 *(Italian)* 87−10657
thyristor model for computer-aided power electronic circuit design 85−1549
TL7700 voltage supervisor for microprocessors 88−18914
TORE SUPRA neutral beam injector, HV circuit 85−44891
touch controlled PSU, 0-20V 86−13991
tracking power supply to increase follower speed 88−63514
transducer bridge power supply 86−46556
transformerless mains power supply, cct. design using power MOSFET 85−10972
transformerless power supply sources using chopper-type HV power MDS-transistors 87−43190
transformers for switched mode power supplies 85−33652
transient analysis of nonlinear networks. 2 *(German)* 88−50010
transient simulation algorithm for power electronics systems 87−73279
transistor switch oscillators with reduced switching losses, multi-purpose parameter optimisation *(Russian)* 87−17439
transistorized bridge convertors, improved efficiency, reliability and dynamic performance 85−33662
trickle-charging of sealed lead-acid batteries, monitoring cct. 85−22637
trip circuit with fast shut off 85−6160
trouble-free current supply for microcomputer systems *(German)* 86−13973
TSC 170 CMOS controller for SMPS, device perform 88−31996
TV circuit networks, operating charact. and repair methodology *(German)* 85−42731
TV multiscan deflection system, new magnetic flux control switched mode power supply 87−13910
TV power processor IC master slave concept 86−11261
TV satellite receive system, indoor unit 87−56352
two-stage SMPS cct. 86−7940
TWT grid modulator, cct. 85−54753
TWT power supply collector regulation without feedback 85−54676
U714 PC integrated LCD matrix driver circuit *(German)* 87−77336
U881 microcomputer controlled line translator converting −60 V to +5 V *(German)* 86−13988
UC1860 IC for resonant mode power circuits control 88−50025
Ukus camera, high-voltage power source for image tube *(Russian)* 85−22626
ULN-3750 family of power op. amps. simplify drive circuits 86−750
uninterruptible power supplies 85−22628
uninterruptible power supplies for computer systems 85−61094
uninterruptible power supplies using power transistors 85−6157
unit specifications, user significance *(German)* 87−73277
unity power factor off line switching power supplies 85−61110
universal 1 A current source and sink *(German)* 85−10984
universal mains supply, voltage and current rates *(German)* 88−70506
universal switched-mode supply sets using National Semiconductors LM 1578/2578/3578 monolithic device family *(German)* 86−52651
UPS, mini DC/DC supplies simplify redundancy in parallel systems 88−50003
user-friendly simulation modeling of generic powerdevices 85−61115
vacuum arcs, low-current behaviour and current chopping 87−73300
vacuum gauge thermocouple-type RCA-1946, power supply unit 85−4155
variable frequency power source for electromagnetic molten Al stirrer *(Japanese)* 86−26155
variable power supply unit, 3-30 V 85−10957
variable stabilised HT supply 85−61097
variable voltage regulated power supply for introductory physics lab 86−7924
vertical deflection circuits for TV sets 88−60397
VHSIC/VLSI power system design 87−44584
VIA I/O devices, power load control 86−8339
voltage converter for tank capacitor, using piezoelectric transformer 85−6156
voltage drop calc. in branch ccts., BASIC listing 88−44041
voltage invertors with forming filter, energy efficiency and reliability *(Russian)* 87−23922
voltage regulator, 3 to 5 V DC, with low current consumption and headroom, cct. 86−20278
voltage stabiliser selection in power supply system *(Russian)* 86−6878
voltage stabilisers charact. using discretely-controlled power transformers, numerical parameter anal. *(Russian)* 86−6879
voltage transients suppression *(Spanish)* 87−44553
watchdog circuit 85−44886
watchdog circuits for 5 V power rail 88−6643
welding current source with invertor, transformer operating charact. 86−45858

power supply circuits continued
wide range high current supply cct. 85−33655
wideband power regulation system for Ar ion laser 87−18910
wind power generation and energy storage, Netherlands 86−51931
ZX Spectrum power supply stabilisation cct. 85−6161
Al electrolytics in switch power supplies *(German)* 86−34510
Co-base amorphous saturable core, loss evaluation 88−51344
GaAs FETs, adjustable-voltage dual power supply 85−28337
Hg arc lamp, new power supply unit design 87−36240
Hg vapour lamp, high-pressure, lead type operating circuit impedance constancy *(Japanese)* 86−52029
Li cell modules for better memory backup 88−44042
$SmCo_5$ permanent magnet DC brushless micromotor with Darlington transistor supply 87−43131
Xe arc lamp, new power supply unit design 87−36240

1 kV mains phase insulation resistance and capacitance calc. by microcomputer *(Russian)* 86−32724
3-phase symmetrical short-circuits calc., using bus hybrid matrix 85−59621
3-phase transmission circuits, computer aided anal. *(Russian)* 86−6313
3-phase unbalanced distrib. system, fault anal. using bus impedance matrix 88−30338
11 kV distrib. ring network, fault diagnosis logic program 88−75150
25 kV underground distribution networks, fault voltages in manholes, tests and computer anal. *(French)* 85−32155
40 kW onsite fuel cell power plant testing, computer aided anal. for site selection 85−48919
50 kW PV system for dairy farm, optimisation using computer model 88−18271
110 kV and 220 kV networks, seasonal and planning optimisation computer program *(Russian)* 87−15229
110 to 500 kV networks of power supply systems, computer program for reliability calc. *(Russian)* 87−30153
525 kV power line induction effects on parallel railway and pipeline 86−12377
AC and DC power transmission, IEE conf., London, England (Sept 1985) 86−12500
AC load flow computation, quadratic algorithm using network reduction and P-V data 86−18781
AC networks with HVDC power transmission, digital simulation of transients 86−70650
AC power flow computation by Gauss-Seidel; sparse matrix technique 86−44943
AC spacecraft power systems, simulation using modulation state variable approach 87−71256
AC transmission networks, anal. of harmonics induced by HVDC convertors 85−48570
AC-DC coupled power system transients, anal. using EMTP program *(Japanese)* 85−59630
AC-DC hybrid power system digital simulation *(Chinese)* 85−53248
AC/DC integrated power system transient simulation 88−54854
AC/DC power convertor fed inverter drives for traction, computer simulation 87−79123
AC/DC power system, transient response modelling using interactive digital simulator 85−26977
accuracy requirements for power unit simulators *(Russian)* 85−32076
active current injection filter, optimised injection current model *(Korean)* 87−15948
active/reactive powers economic dispatch algorithms *(Chinese)* 85−21046
adaptive harmonic cancellation, SPICE model 87−42305
adaptive tracking state estimator for large scale power systems using nonlinear programming 87−71496
advantages and disadvantages, anal. tools 88−61856
AHAB intelligent CAI program for troubleshooting simulated marine power plants 88−31360
algebraic manipulation systems or electrical power systems 87−9071
algorithm for contingency anal. 85−15464
alternating sequential parallel processing system for power system stability calcs. 88−75062
analog computer analyses and control practices, history 88−42741
Anglo-Scottish interconnection, appl. of power system stabilisers, system damping eval. 88−48480
annual operating strategy, HV/MV transformers power reserve computer-aided forecasting *(Italian)* 85−21181
antiemergency control regime calcs. accel. for weak intersystem tie lines 87−4282
application of planning programs for power system control problems 85−26941
array processor, 64-bit and VAX 11/780, eval. for power system security functions 86−50773
artificial intelligence and expert systems *(French)* 88−36979
asymmetrical short cct. currents calc. in personal computer *(German)* 87−4295
audio-frequency central control for power systems, computer aided network calcs. *(Hungarian)* 85−59565
automated online harmonic meas. system for industrial plant electrical systems 87−15179
automatic fault diagnosis system, distributed collaboration programs 88−23376
automatic generation of input data for the analysis ofgrounding grids 86−50926
automatic testing system for distribution transformer *(Japanese)* 87−41347
autonomous power system steady-state operation, fast search extrapolation algorithm *(Russian)* 88−5278
BERELT program for asymmetric operating state calc. for power system planning and operation *(German)* 86−18635
BERELT program for power flow and three-phase short-circuit current calc. *(German)* 86−18678
binary geothermal power generation scheme, analysis program in TI59 computer language 85−43887
Boeing EASYS software for modeling and simulation of spacecraft power systems 88−68588
Bombay Electric Supply & Transport 11 kV distribution system overvoltage analysis 85−53315
boundary selection for adaptive power network matrix reduction 88−10710
power system analysis computing continued
Brazilian hydroelectric power system planning, computerised reliability eval. 88−68845
budget prediction with personal computer 87−42409
building energy simulation, rational energy use *(German)* 85−32821
bulk power system reliability assessment using RECS program 87−4270
bulk power system reliability eval. using PROCOSE computer program 88−10808
CAD and CAE software integration for power system anal. 86−70565
CAI about power distrib. systems, by graphic qualitative simulation 88−36839
capacity reliability model *(Czech)* 88−17059
catenary tension calcs. using LIFT computer program 86−61117
CEGB, national demand forecasting in an on-line real-time environment 87−21900
circuit and raceway tracking microcomputer system SETROUTE 86−61103
coal quality impact, computer model for plant performance and operating cost prediction 87−78497
COGEN3 cogeneration analysis software user's guide 87−35798
cogeneration project design, costing and economic optimisation program 85−53377
coherency based dynamic equivalents, practical testing 85−48512
coherent generators in power systems, online identification *(Chinese)* 87−15146
colliery electrical network analysis, supply system study using interactive power supply anal., IPSA 88−11543
combined cycle power plants, computer calc. of frequency and duration models 85−59839
commercial energy market end-use analysis, COMMEND model user's and programmer's guide 86−56964
complex catenary and support current distribution calc. program, in BASIC *(Japanese)* 86−56989
complex energy systems with distributed parameters, transient behaviour, calc. 85−9476
complex loss formula coefficients for short-term economic dispatch calc. *(Chinese)* 86−39046
complex power system electromech. oscillation identification and sensitivity analysis *(Croatian)* 87−15172
complex power system reliability by electronic simulation *(Russian)* 85−48530
complex system failure state assessment in stressful EM environments 88−8531
component failure anal. using expert system methodology 88−42734
composite power system fluctuating static stability, FORTRAN program suite *(Russian)* 88−5277
computation oriented programming environment (COPE) language for power flow computer studies 87−21873
computer aided anal. of power plant and power system reliability *(German)* 86−12256
computer aided steady state analysis training using a simulator *(Russian)* 85−21077
computer modeling for operating condition calcs., load distrib. *(Russian)* 88−68722
computer programs for analysing and planning a selective network protection system 88−17099
computer simulation, numerical oscillations elimination 86−12244
computer studies 85−32050
computer-aided analysis of power-electronic systems 86−12246
computerised calculation of electromechanical and electromagnetic transients in power systems *(German)* 85−38381
computerised equivalent network transients anal. of power systems with motors as main load 85−43567
Connecticut Yankee power plant availability study, using fault tree methods and UNIRAM package 88−10935
Conservation Policy Analysis Model, for power system planning 87−21896
consumer supply, computer-based frequency distribution analysis 85−15591
contingency analysis, stability and optimal dispatch, REI-DIMO equivalent 86−6261
contingency evaluation in power system planning and operation, fast algorithm 87−57590
control, state estimation program, operating experience *(Hungarian)* 86−25507
control centre security anal., model development, database system 86−56375
converter combination with machine, bond graph model 87−43284
costs optimisation in combined power and heat production, using microcomputers *(Czech)* 86−18682
counter-emergency automatic systems modelling *(Russian)* 88−61866
cumulant method of power system probabilistic simulation, principles, mathematics and limitations 87−71615
Customer Information System database for electric power service reliability assessment 87−9159

fault location anal. and computation on basis of zero-sequence current on power lines *(Chinese)* 87−15364
fault location and identification using microprocessor-based Kalman filtering 88−55094
faulted EHV transmission lines with series compensation, digital simulation 86−39152
faulty power system eqns., numerical method 86−61004
field anal. of substation ground grid, continuous low voltage fault appl. 85−65301
floating vector processor for power system simulation 86−32625
floating-point systems array processor evaluation for power flow calc. 87−15241
FORECAST MASTER software package for utility load forecasting 88−75122
French power system management, use of DEMETER model as decision-making aid *(French)* 85−26970
frequency control system identification for long-term dynamic characteristic simulation *(Japanese)* 86−50867
fuel bill reduction by computerised performance monitoring 86−44861
functional modelling, systems availability evaluation by success analysis 87−9125
gas turbine power cycles, computer modelling 87−30407
gas-insulated transmission lines, meas. and modelling of switching transients 87−57643
generalised network and flow soln. by loop analysis *(Chinese)* 87−35607
generalised network parameters matrix refinement for electrical energy shortfall estimation *(Russian)* 87−64121
generating unit complex control system D-decomposition curve computation 85−59998
generating unit unavailability impact on system heat rate, Monte Carlo simulation 87−9364
generating units modelling for reliability anal. using CEA-ERIS database 88−23298
geometric approach to bad data analysis in electricpower systems state estimation 86−65645
Gezhouba-Shanghai HVDC transmission line, China, computer based statistical overvoltage study 88−68896
GOSAV hydro power plant system, optimal production scheme 88−30328
Greek electricity power system, multiobjective interactive programming applied to energy planning 88−5308
grid load forecasting, time series anal. adaptive model appl. *(Chinese)* 85−9457
grounding resistance in uniform soil, expression calc. 86−6399
HARMFLO computer code Version 4.0, user's guide 87−35544
HARMFLO power system harmonic analysis code enhancement 86−39010
harmonic measurements using digital storage oscilloscope 88−30265
harmonics due to gaseous discharge lighting computer aided Fourier series method 85−43542
heat pump, naval shipboard, computer simulation model 87−31081
Hellenic transmission system, probability indices of transient stability 87−57550
HEMP response effects models on distributed power system 88−8528
high-impedance fault detection algorithm implementation 85−59676
hourly loads, long term forecasts, HELM computer code 85−38466
Hubei (China) power system online state estimation *(Chinese)* 87−50678
HV, automatic controlled reactive power EM compensators, design 86−12334
HV bushing computerised thermal anal. 88−23541
HV network distance protection setting, interactive computer program *(Croatian)* 86−12495
HV network transient analyser for power system planning 86−25538
HV networks, function oriented topographical data model, process computer appl. *(German)* 88−42771
HV overhead lines, requirements calc., FORTRAN program *(Danish)* 85−27079
HV transmission line, switching overvoltages, computer aided and expt. study 86−51000
HVDC and static VAr systems study using NETOMAC program 88−68820
HVDC convertor disturbances, computer aided diagnosis 86−12501
HVDC link integration into large AC systems, modelling and programming 87−71636
HVDC multibridge convertor system dynamic simulation by diakoptics *(Chinese)* 87−9149
HVDC multiterminal systems digital simulation for transient stability anal. using a simplified DC system representation 85−59658
HVDC power flow modulation, large-signal and decentralised small-signal controllers 87−30159
HVDC power systems, harmonic instability of feedback control, computer modelling 86−12399
HVDC power transmission system transients, digital simulation 86−12398
HVDC system harmonic instability anal. using describing functions, computer model of convertor 87−42437
HVDC systems, fault anal., knowledge based system 86−61087
HVDC systems, modelling and simulation of converters and controls 87−78018
HVDC systems, power modulation controls and computer simulation 86−50973
HVDC transmission links, diode bridge rectifier unit connection, time-domain anal. study 88−23440
HVDC transmission system, 4-terminal, digital simulation using Electromagnetic Transients Program 85−27029
HVDC transmission system, fault diagnosis using knowledge based expert systems 88−48546
HVDC transmission systems, dynamic digital simulation 86−12383
HVDC transmission systems, series tapping schemes 88−48548
HVDC transmission thyristor valve fast-transient voltage distrib. computation *(Chinese)* 87−9148
hybrid computer simulator development for electrical power systems 85−59543
hybrid photovoltaic array and aerogenerator system performance evaluation 86−45261
power system analysis computing continued
hybrid power systems monitoring using data logger and remote control 88−30259
HYDRA: an interactive tool for automatic generationof FORTRAN code for hydraulic circuits 87−9120
hydro-thermal midterm scheduling for Hydro-Quebec production system 86−61028
hydro-thermal power generation coordination using digital computer package 86−56364
hydro-thermal power system, optimal power scheduling by computer 87−42322
hydro-thermal power system optimal scheduling *(Chinese)* 86−12728
hydroelectric, operation optimisation 85−4998
hydroelectric costs simulation *(Croatian)* 85−38419
hydroelectric high pressure plant, hydraulic supply line system, simulation model *(German)* 85−32388
hydroelectric power station, water-hammer effect, simulation *(German)* 85−32380
hydropower system expansion optimisation 86−39605
hydrothermal power system, fixed-head, optimal load flow problem 87−21867
hydrothermal power system planning by mixed integer programming 86−56387
hydrothermal power systems optimal scheduling 85−38464
hydrothermal unit commitment and coordination using CHT digital computer package 87−4262
IDOR-2 algorithm and program for power system interconnection steady state anal. 87−21848
IKBS for fault diagnosis in electricity system 88−61998
implicit failure model upgrading by expert system builder software 87−5302
incremental transmission losses, online calc. 88−68832
INDACTIC 65C system for recording and evaluating power system fault sequences 88−36896
industrial energy conservation and management computer model 86−61820
industrial networks harmonics anal. using digital computer programs *(German)* 85−21176
industrial power networks, voltage behaviour simulation using PCs *(German)* 88−23432
industrial power supply system, steady state eval. by sequential reduction technique *(Russian)* 87−9151
industrial power system stability, computer aided anal. 87−21879
industrial rectifiers, transformer served, harmonic impact on power systems 88−24070
insulation parameters calc. relative to earth of 6-10 kV networks using programmable calculator *(Russian)* 86−6346
integrated AC and DC power systems, digital and analogue simulation 86−50879
integrated distribution network information system, graphical data processing introduction *(German)* 85−53320
integrated electric-utility system computer model 87−30128
integrated gasification-combined cycle availability analysis 87−72012
integrated harmonic simulation/meas. system, PC-based, features 87−71761
integrated power system analysis capability using modular software package 88−36802
intelligent load flow engine for power systemplanning 87−4331
intelligent simulation environments appl. to elec. power systems 88−23294
interactive computer system for selective decision making *(Russian)* 87−15120
interactive database management for power system computer aided instruction 85−38392
interactive power flow program design considerations for microcomputers 87−9074
interactive power system analyser with graphics for educational use 86−61027
interactive power system analysis and control fordistribution system operation applications 86−70618
interchange transaction planning software 87−71531
interconnected and single power systems, computer processing of control meas. *(Russian)* 86−25499
interconnected HV transmission networks, computer aided anal. of short circuit current-voltage relationship *(German)* 86−70643
interconnected power systems, IDMT relay perform. computer assessment for phase and earth faults 88−36889
interconnected power systems, rapid large disturbance stability assessment 88−5279
interconnected power systems, reliability of scheduling 87−9117
interconnected power systems, robust algorithm for economic dispatching 85−38432
interconnected transmission networks, PROLOG network-graph generation for system surveillance 85−48564
interim multi-area economic dispatch using limited computer resources 85−59600
intermittent photovoltaic energy systems introduction into distribution systems, microcomputer aided evaluation of impact 86−6664
IPSCON software package for power system security control, reactive power control and load dispatching *(Chinese)* 87−15148
joint dispatching of generating resources, energy prod. costing 88−10780
Kalman filtering, microcomputer analysis, for power system protection 86−39221
large cities power supply system long term study method 85−59647
large electrical networks short-circuits. anal. using fast algorithms *(Spanish)* 85−38445
large power networks state variables, sensitivity 86−70609
large power system transient stability analysis, direct method 87−42382
large power systems short-circuit currents calculation *(German)* 85−26990
large scale power systems, fast decoupled state estimator with error processing 86−50921
large-scale mains systems, automatic partitioning of graphs *(Russian)* 86−39078
large-scale power flow optimisation via parallel processing 88−23372
large-scale power systems reliability; eval. using Monte Carlo method 87−30016
large-scale radial distribution networks, sensitivity anal., computerised algorithm 85−21194
large-scale system state estimation appl. 86−6206
LF magnetic fields caused by power supply systems, calc. and reduction 87−30176
LF power oscillations, identification using digital simulation, eigenvalue anal. and spectral anal. 87−77993

power system analysis computing continued
LF power oscillations in electric power systems, risk evaluation *(Danish)* 86−12233
lightning conductor protection zone, programmable pocket calculator eval. *(Russian)* 87−4439
line overload alleviating by line switching 88−42790
linear flow estimation in computer models for long term system planning in CEGB, EDF, ENEL 88−48533
linear programming, modified simplex method *(Chinese)* 86−25469
load analysis of distribution systems, integrated data acquisition and information processing 87−4376
load and energy forecasting, microcomputer appls. 86−39086
load characts. determ. by group method of data handling (GMDH) *(Japanese)* 86−50854
load compensation of single-phase nonsinusoidal system 85−4554
load control, automatic mathematical model formation from telemetry data 85−43521
load curve, survey system *(Japanese)* 86−61055
load demand, online prediction algorithms 86−39072
load dispatch curves, dynamic programming based method 86−50839
load dispatching using online correction algorithm for power system stability 85−21116
load distribution management information system data models *(German)* 85−53255
load flow, cluster anal. for distributed array processing solutions 85−53261
load flow, decomposed algorithm for parallel processing 86−12234
load flow, microprocessor based anal. and interprocessor communication 87−4307
load flow algorithm for hierarchical power systems, piecewise *(Chinese)* 87−71517
load flow anal., appl. of parallel soln. spare linear systems 88−48455
load flow analysis, simultaneous linear eqns. for pipeline operation 86−38996
load flow analysis and control using computerised methods 88−68811
load flow calc., microcomputer-based algorithm *(Chinese)* 85−38482
load flow calculation parallel processing method using sensitivity matrix 86−25495
load flow calculations using modified quasilinearization method 86−38994
load flow plan production and documentation, computer support *(German)* 88−5259
load flow programs for cement plant power system design and modifications 86−52083
load flow studies using desktop computer 86−56386
load forecasting, expert system appl. 87−15221
load forecasting, short-term, temp.-sensitive method, math. model 87−35599
load forecasting model *(German)* 85−32107
load forecasting using microcomputer-based data acquisition 88−48529
load loss, sudden, analysis 87−71520
load management strategy testing 86−6232
load representation effects on *(Rumanian)* 87−9087
LOADSYN load model synthesis software package for power flow anal. 88−54912
LOADSYN load-modelling software for power flow and transient stability computation 87−42383
long term simulation for real-time training of power system operators 87−42350
long-distance UHV line transient short-circuit current computation *(Chinese)* 86−56405
long-term transmission expansion planning, application of sensitivity anal. 85−38481
longitudinal power systems, security assessment, voltage control, transient stability and freq. dynamics 86−61030
loss reduction and power quality improvement by using compensating devices *(Russian)* 87−35550
LOTDYS, long term power-system dynamics anal. program, research and functions *(Japanese)* 85−59631
low-frequency oscillations, anal. and suppression *(Chinese)* 85−59623
LV distribution networks, computer aided load meas. anal. *(German)* 86−39118
LV systems, current-limiting and inverse short-time delay circuit-breakers, selectivity criteria 88−17790
LV/MV distribution networks loads calc. using computerised model 85−59701
machine-network interfacing digital simulation *(Chinese)* 85−4526
Madhya Pradesh Electricity Board computerisation experience 86−44855
magnetic core B/H excursions, digital simulation for power system studies 88−48436
mains perturbation by cycloconvertor-fed synchronous motor drive 87−22602
mainsborne communications in LV distribution networks, computer modelling 87−34333
maintenance management program, importance of peripheral activities 87−72763
marine AC/DC power system, dynamic responses prediction, component simulation 88−36782
marine power plant expert fault diagnosis performance model 86−52005
marine power system dynamic response anal. by computer 88−23324
MARKAL energy system model, computerization and appl. 87−50681
mass-thermal dependences computing for NHKG power plant *(Czech)* 85−53241
measurement error characteristics determination when estimating state of electric power systems *(Russian)* 86−50779
medium-voltage distribution network disconnection optimisation *(Croatian)* 87−15257
microcomputer based interactive graphics package for power system anal. education 86−81
microcomputer-aided evaluation of planning impacts of intermittent power producers into distribution system 86−18743
micromachine test for network and synchronous generator dynamic simulation program 87−22284
microprocessor based power line analyser, μPHA-5 88−36899
microprocessor information measuring system IIS3 for power accounting and monitoring *(Russian)* 88−42795
microprocessor relaying for generator protection on stator asymmetrical short-circuits, rotor overheating and field failure 88−75550
microprocessor-based symmetrical component analyser for power system analysis 87−21191
midterm transient simulation with REI-DIMO models 86−6265

power system analysis computing continued

expert systems and powers systems appl. introduction *(Chinese)* 88−54881
expert systems appls. 86−56229
expert systems for electric power control, prototype systems 86−56346
extremal conditions control modelling, language formulism *(Russian)* 85−38440
factory automation development at thermal power plants *(Japanese)* 87−64349
factory energy management systems, in-house development and use 86−13194
factory power supplies, electrical-load-shedding system *(Italian)* 85−64888
Fair Isle wind turbine and diesel generation project, operating experience 87−51116
fast automatic contingency selection algorithm with bus voltage criteria 87−71599
fast transient stability solution using REDUCE algebraic processing language 88−36757
fault containment automatic computer control in complex network schemes of power system *(Russian)* 87−15169
fault diagnosis of power system, knowledge-based approach 85−59582
fault diagnosis using expert system knowledge base 87−4319
fault diagnosis with expert system enhanced by general problem solving architecture 87−78020
fault tolerant feeding system for elec. railways, control *(Japanese)* 88−31109
fault tolerant power system design for fighter aircraft 88−5093
fault-current-limiter, shunt microprocessor controlled fault-current-limiter 87−30279
faults, computer control for adaptive selective protection 87−57548
Federal Republic of Germany's electric grid, overview and connection with other European grids *(German)* 85−53244
fill-graphics man-machine interface 88−68785
Finnish load management and distribution automation systems 85−64832
Finnish national control centre, computer aided generation planning and control 86−70612
Finnish national control centre, SCADA system with state estimation 86−56376
Finnish power system control centre 87−30054
Fletcher's quadratic programming approach to power flow control 86−12308
Florida Power and Light's Unit Commitment program for fuel allocation and security area constraints 87−30061
Foula electricity scheme, wind and hydro powered, pump storage capacity 88−43111
French EHV substations, digital techniques for protection 85−65398
French National Control Center for power system control, developments 87−30053
frequency control for BEWAG in West Berlin *(German)* 88−68760
frequency transients connected with emergency unloading of electric power systems *(Polish)* 88−10730
frequency-tracking instrument 86−39036
FURNAS hierarchical power system control, Brazil 86−70636
future computer applications in power 88−42787
gas insulated substations, electronic control equipment interference problems 86−51865
gate turnoff thyristor DC cct. breaker controlled by single-chip microcomputer 85−65385
generation scheduling and control 88−30312
generator optimal control system, appl. of multivariable control theory *(Japanese)* 86−33292
generator voltage/VAr control using master station voltage controller 87−15159
GEODE system for energy management and equipment optimisation telecommunication power plants 85−64859
Georgia Power Co. Microprocessor Assisted Governor Control 86−25496
grid automation systems, decentralised versus centralised control 87−71587
group load curtailment using an integratedcommunications/load control network 86−50914
GTO PWM invertors parallel running 85−10019
Hail region (Saudi Arabia) 350MW electrification project 87−21865
hierarchic multilevel antifault control systems, structure and coordination algorithms 88−17055
hierarchical, present status and future problems 85−43508
hierarchical power system with distributed structure *(Hungarian)* 87−71649
high and medium voltage switchgear, control and supervision system, using optoelectronic data transmission and microelectronics 88−24099
high power testing laboratory, integrated hardware and software system 88−61990
high speed differential protection of Teed circuitsusing wideband communication techniques 85−64972
historical information spreadsheet for power system operation 86−50908
historical information spreadsheet for power system control operation 87−30063
homeostatic control of power systems for improved pricing 86−70631
Honeywell TDC 3000 process control system for Rhineland Energy Industry and Akzo Zout Chemie *(Dutch)* 85−43518
Hubei Provincial Power Dispatch Centre, China, interface between telecontrol equipment and front-end computer *(Chinese)* 87−15149
Hungarian national load dispatching centre, computerised control 86−12307
HV and medium voltage networks, Geadat control system for Lech Electricity Works *(German)* 86−12258
HV feeder and substation protection, microprocessor-based package 86−56485
HV stations, integrated protection and control 85−65400
HV substations, control and management, simulation algorithm *(Russian)* 86−6225
power system computer control continued
HV switchgear control, microprocessor-oriented technique *(German)* 87−4837
HV switchgear plant control by process computers and microelectronics *(German)* 87−4838
HV transmission substations develop., systems approach 86−45594
HV/MV substations, protection and control 88−24111
HVAC transmission system interconnections, static Var compensators control strategy 88−68810
HVDC bulk power transmission, control and protection system development 86−39109
HVDC power flow modulation, large-signal and decentralised small-signal controllers 87−30159
HVDC system management using intelligent controllers, perform investig. 88−61893
HVDC transmission, control equipment design 86−12407
HVDC transmission, fault tolerant issues for controllers 87−4299
HVDC transmission and BWR nuclear power plant, hybrid control system develop. 86−65677
HVDC transmission system computer control, expert system design 88−23312
HVDC transmission systems, multiterminal, digital control method 86−12336
HVDC/AC system, reactive current control, microprocessor-based implementation 86−12337
hydraulic power plant digital control systems 88−5584
hydro and hydro-thermal generation systems, computer algorithm for optimal operation 87−4622
hydroelectric power plants, centralised supervisory control system 85−27344
hydroelectric power supply system operation, optimal dispatch and control 87−71606
hydrothermal power system, integrated hierarchical forecasting, scheduling, monitoring and dispatching system 87−71591
IBM personal computers in SCADA and energy management systems 86−25525
INDACTIC 15, master station for telecontrol networks 85−64793
industrial energy systems control in Romania *(Romanian)* 88−61833
industrial power system automation, benefits of instrumentation, protection and control integration 88−61867
information management for control and display, in network control 88−48514
information measurement sub-system for an automated system of supervisory control of power objects *(Russian)* 87−21869
information reliability of automated systems for checking and accounting electric power consumption *(Russian)* 88−10746
information system for controlling distribution of electrical power in independent object *(Russian)* 88−48492
information theory problems in automated despatcher control systems, power systems 87−42326
information value in power system management 87−64074
inspection and maintenance system for padmounted equipment 87−9129
instantaneous power factor compensation and thyristor flicker corrector *(Japanese)* 86−32684
integrated automatic dispatching system for local load-dispatching offices *(Japanese)* 88−10745
integrated automation of power equipment, status and prospects *(Korean)* 87−78214
integrated control of generator stability by microcomputer 87−71584
integrated control system, bottom-up design approach 86−44905
integrated dispatch and control system SINDAC-3, software *(Chinese)* 85−38397
integrated distribution automation and load control system at Knoxville Utilities Board, Tennessee 87−15215
integrated power and building services management system for British Telecom 87−21878
integrated power management scheme for telecommunicationssystems 85−64857
integrated power system control and operation technology 87−42385
integrated power systems, computer aided control options 87−4301
integrated power transmission automation using real-time multi-task microcomputer *(Chinese)* 87−71519
integrated SCADA and load management system 85−4583
integrated security analysis and remedial action package 87−71597
integrated security monitoring and control systems, contingency anal., preventive control 87−78010
integrating power plant computer-aided engineering applications using a single data model 88−42816
interactive control with consumer involvement *(Hungarian)* 87−15175
interactive eval. and control of strained operating regimes, OPTIMUM algorithm package 88−36787
interactive graphical information system for medium voltage network control of Lech Electricity Works *(German)* 86−12259
interactive power system analysis and control fordistribution system operation applications 86−70618
interconnected and single power systems, computer processing of control meas. *(Russian)* 86−25499
interconnected power system, automatic generation control using singular perturbation approach 88−54887
interconnected power system, co-ordinated system of automatic freq. control and power flow reduction *(Czech)* 87−57508
interconnected power system, voltage control using expert system 88−61868
interconnected power system hierarchic fault management system 87−9085
interconnected power system of Europe, computerised control and meas. system *(German)* 87−15174
interconnected power systems, computer control and data communication 85−43559
interconnected power systems, developments review since 1927 86−25501
interconnected power systems, digital automatic control system for frequency and active power control *(Russian)* 86−18675
interconnected power systems, digital controller design for enhancing steady-state stability 86−18700
interconnected power systems in USSR, digital control and limitation of power flows *(Russian)* 86−32659
interference of synchronous machines with optimal stochastic automatic excitation controllers. 87−57556
Italian power generation and distrib. network, ENEL, supervisory control system, software development 85−43561
JT-60 poloidal field coils, thyristor convertors, control and protection 85−5212
Karlsruhe electricity supply control using telemetry *(German)* 88−42782

power system computer control continued
KELAG computer-aided centralised control scheme *(German)* 86−25513
KELAG Klagenfurt system control centre computer project *(German)* 86−25515
KELAG online network security calculation program experience *(German)* 86−25514
knowledge-based systems for power system operation and control 88−23384
Kreuzlingen power system control room using Telegyr LS 2000 computer *(German)* 88−30275
Landis & Gyr substation, regional, and national control schemes *(German)* 87−4246
large hydrothermal power system decomposition and co-ordination for optimal scheduling *(Chinese)* 87−77999
large scale systems, state estimation appl. 85−64851
large-scale interconnected systems, Washington University work 85−9451
large-scale power system voltage and reactive power control 88−68783
line overload alleviating by line switching 88−42790
load control, by Riconti RLZ 400 load control centre *(German)* 85−59561
load control, centralised statewide system in North Carolina 85−59583
load control for electric water heaters, microcomputer based system using radio system 87−35582
load dispatcher automatic control, develop. of second generation systems *(Polish)* 86−18689
load dispatching, automation and computer applications for Chinese power systems, new prospects *(Chinese)* 85−15473
load dispatching, data visualisation *(Polish)* 86−44883
load dispatching, open loop security dispatch *(French)* 86−50810
load dispatching, stable system operation with voltage optimization 87−35579
load dispatching at Beijing centre using DJS-130 dual computer system *(Chinese)* 85−15476
load dispatching by telecontrol system using iSBC 86/12A microcomputer *(Chinese)* 87−15150
load dispatching computerised monitoring and control *(Czech)* 88−30291
load distribution, automation, project implementation and preliminary performance 86−18694
load distribution automation system, overview 86−65647
load distribution management information system data models *(German)* 85−53255
load distribution problem analysis and process computer soln. *(German)* 87−4245
load distribution research project at Athens, Tennessee 86−65648
load flow analysis and control using computerised methods 88−68811
load flow state estimation method 87−4308
load forecasting, adaptive on-line model 87−21899
load forecasting using maximum entropy method and spectral estimation *(Chinese)* 87−9106
load management, air-conditioner cycling program PEAKSHIFT 87−4258
load management, integration into operation and planning with load regulation forecasting 85−59590
load management as resource, air conditioner control program 87−4257
load management based on PC, implementation in Sweden 87−30056
load management by carrier frequency control *(German)* 87−4229
load management computer system integration into existing computer systems 88−61843
load management in AEW supply area, energy consumption optimisation by remote computer control *(German)* 87−64037
load management integration into power system control centre operations 87−35588
load management scheduling using dynamic programming 88−10765
load management system for 39 EMCs 85−59634
load management system using microcomputers *(German)* 88−48474
load management using microcomputer based CTPL 88−48500
load management/prediction at Ophir council, using ORAC parallel processor 86−65649
load regulation, second generation system of Detroit Edison 85−43541
load regulation using remote control installations and computer controlled system *(German)* 87−64038
load shedding, computer control technique 85−64842
load shedding and restoration, microprocessor based equipment 86−61050
load-frequency control with short-term load prediction 87−71595
logic programming in PROLOG 87−4321
loss minimisation on distribution systems by shunt capacitor control 86−39136
Maarweg distribution network computer-control system, computer network configuration *(German)* 85−64892
Main-Kraftwerke AG power system, W. Germany, communication network for telecontrol *(German)* 88−54893
Main-Kraftwerke AG power systems, W. Germany, hardware description and perform. *(German)* 88−54892
mainsborne telecontrol in domestic electricity metering, encryption techniques, technology and trials 88−30423
maintenance management system, automated, effect on organizational communication 88−30331
man-machine interaction problems 86−50920
management system, personal computer based 86−50923
map board for power system computer control 86−50873
Markov transition matrices for simulating stochastic and persistence effects on weather dependent systems 86−61007
master station voltage controller and optimal power flow software 86−61075
medium voltage distribution networks, computerised control and monitoring *(French)* 85−27045
medium voltage network control for Neckar Works Power Utility, command centre data handling *(German)* 86−12261
Meidensha SCADA system for power supply control 85−26983
metallurgical industries, use of automated management systems in electric energy management 88−17042
microcomputer based protection and monitoring of power system feeders 85−48613
microcomputer based system for efficient use of electricity in industry 87−30069
microcomputer based telemetry control system *(Russian)* 86−32662
microcomputer controlled water heaters, small utility's experiences 85−16426
microcomputer-based data acquisition and control system *(Chinese)* 85−15477
microcomputer-based distance relay, fault location algorithm and prototype expts. *(Chinese)* 86−51145
microcomputer-based equipment for automatic control of substations 85−65397

power system computer control continued
microcomputer-based load management system for elec. energy utilisation improvement 85−21089
microcomputer-based SCADA at Commonwealth Edison Company 88−61842
microcomputer-based supervisory control system for HV circuit breakers *(Japanese)* 86−40030
microcomputer-based telecontrol system for power distrib. system 85−9501
micromachine system, microprocessor controlled, for power system stability investigations 87−30663
Microman automatic peak load controller, design and operation *(Dutch)* 87−78002
microprocessor automatic control for increasing stability 86−12335
microprocessor automatic control systems for power-system facilities 87−42333
microprocessor based approach to power room supervision 85−64852
microprocessor based underfrequency relaying 85−64966
microprocessor control, needs and system aspects for telephone exchange monitoring 85−64855
microprocessor controlled VAR compensator fordistribution feeders 86−56426
microprocessor instrumentation in electrical power system distribution, protection relays 85−32248
microprocessor-based accurate fault locator withremote-end infeed compensation 85−65013
microprocessor-based adaptive governor with variable PIDparameters for a hydroelectric generating unit 86−51510
microprocessor-based current differential relay foruse with digital communication system 85−64973
microprocessor-based equipment for HVDC transmission system control, design features *(Chinese)* 85−38491
microprocessor-based frequency and interchange power control for a small electric power system *(Croatian)* 87−21859
microprocessor-based inrush restrained differential relay for transformer protection 87−30731
microprocessor-based local controllers for electric power systems *(Spanish)* 85−15471
microprocessor-based optimal efficiency drive of a separately excited DC motor 85−5122
microprocessor-based power controller design and evaluation for autonomous photovoltaic systems 86−45272
microprocessor-based protection and instrumentation for interconnected low voltage substation 85−65403
microprocessor-based protection and recloser control relay 85−64982
microprocessor-based PWM waveform generator for voltage source inverters 88−17712
microprocessor-based stabilizing control equipment for survival of isolated-mid city power system 87−30049
microprocessor-based supervisory control equipment *(Chinese)* 85−38399
microprocessor-based underfrequency relay for load shedding *(Dutch)* 86−25503
microprocessor-based XS92a test set for comprehensive testing of line protection equipment in field 85−65009
microprocessor-controlled power system voltagestabilizer 86−12333
minicomputer application software development *(Chinese)* 87−4227
mining distribution network management, switchgear monitoring and control system 86−7358
MIS development for power generation and transmission in North Bohemia *(Czech)* 86−70586
Missouri electric cooperatives, distribution automation 87−78027
MKW power system, W. Germany, computerised supervisory control system *(German)* 88−54889
MKW power system control using computerised switching *(German)* 88−54890
model system for control of extremum states, use of complex-system data representation language *(Russian)* 86−39041
monitoring and control, conf., Durham, UK (1986) 86−66553
monitoring and control system for the main network of the Southwest power system *(Chinese)* 88−54880
Moscow power system, automated process control system for generating units *(Russian)* 87−50674
multi-level dynamic security control, emergency and restorative states *(Chinese)* 87−71554
multimachine power system closed loop hierarchical optimal controller 88−30305
multiple boiler/turbine plants, service life extension, case history 86−6584
multistage frequency relay with undervoltage and light-load blocking 85−9410
MV and LV distrib. network fault localisation using CATV network 88−17151
MV cable supply systems planning, new trends 85−59648
MV/HV distribution network computer control, microprocessor based supervisory system *(Italian)* 88−61831
MV/HV power system control using BECOS 28 EMS and BBC-PROCONTROL N control system 88−36750
national control centre, Zimbabwe 87−15145
Nebraska public power utility upgrade using SCADA master station 88−17077
network, description and evaluation using a grid data language *(German)* 87−64016
network analyser enhancement for real-time power system control studies 87−4260
network command centre with computer control of Hessen Electricity Works AG *(German)* 86−44865
network constrained reactive power control using incremental reactive current model 86−70628
network control centre, significance of technological unit network components *(German)* 87−42442
network control station simulator for training and education *(German)* 87−57620
network digital protection by microprocessor *(Hungarian)* 87−64201
network modeling, algorithmic, software design and implementation considerations 87−4313
network operation management system for electricity and gas utilities *(German)* 88−54899
network telecontrol meas. point allocation *(Chinese)* 87−71753
network topology updating system *(Czech)* 87−57516
New Zealand Energy Ministry's Electricity Division SCADA and logging systems 86−56358

power system computer control continued
NHK broadcast centre, Japan, building management system for power and environmental equipment 88−30323
Nitrokemia Industrial Plants, computerised power system control, alarms control *(Hungarian)* 88−76054
nodal active and reactive loads, short term forecasting 86−70641
nodal image DIMO analysis and implementation 86−6264
node of intelligence for power system supervision and control 87−71588
Norwegian power system communication system for control centres 87−71592
NSLS VUV and X-ray storage rings transfer lines, magnet power supply control 86−24949
nuclear power plant high reliability control system (NURECS-3000), fault tolerant system 86−70752
Nuremburg supply network sequential control using diadic computer technology *(German)* 85−15484
Odessa regional power pool automatic control and maintenance for improved reliability *(Russian)* 88−61821
oil refinery power facilities, distributed digital control *(Japanese)* 87−71540
on-line security monitoring *(Japanese)* 87−4293
online secure-economy preventive control by pattern recognition 86−56367
online security anal., modelling error effects 86−50835
online security anal., modelling error effects 86−56374
online security assessment using expert systems 88−10768
online security control strategy for worst emergency state 88−23363
online stability monitoring, phase portrait 87−71602
operating conditions recognition using microcomputer *(Russian)* 88−36764
operating state, observation and assessment anal. *(Czech)* 86−32670
operation and control, expert system for security control 87−57554
operation control using expert systems, software methodology 88−54923
operation support system for power distribution facilities *(Japanese)* 88−75106
operational improvement associated with new technologies 86−65608
operational improvement techniques and tools 87−4226
operational objectives and criteria *(French, English)* 87−50646
operations, integration of load management, hardware and firmware considerations 87−30058
operator activity model *(Russian)* 85−48531
optimal control using Pontryagin maximum principle in extremum variation method *(Russian)* 86−70589
optimal inspection intervals for testing channels of automatic process control systems in power units *(Russian)* 85−21124
optimal load flow for power systems using combined linear-nonlinear programming strategy 87−71569
optimal power flow for operational planning and utilisation 87−4310
optimal resolving of the overloads in an energysupply system 86−39061
optimal voltage and reactive power control *(Chinese)* 88−61807
optimisation of power system dynamic load shed scheduling 85−59585
optimization of power interconnection regimes using natural indices 87−64071
optimum integrated operation 87−71576
Orange and Rockland Utilities Inc., USA energy management system *(Korean)* 85−4555
Osijek remote control centre, program Proza, database anal. *(Croatian)* 88−17062
overcurrent protection control using PC-based expert system 88−75104
overcurrent-time protection, computer aided coordination 85−59812
overhead lines, weather conditions effect calc. in computer control of power systems *(Russian)* 87−4413
overload alleviation expert system 88−54947
overloading and voltage stability, online contingency selection algorithm 88−36758
packet switching network system for power control at Tokyo Electric Power Co. Inc. *(Japanese)* 87−64084
parallel algorithm for real power economic dispatch in power systems *(Chinese)* 88−61808
peak demand control *(Slovenian)* 86−65632
performance modelling of control systems 87−30019
petroleum refinery plant power system, distributed programmable controller and microcomputer based control and monitoring 86−45869
photovoltaic modular power system design and operation, Flagami project in South Florida 86−39635
photovoltaic power systems, microprocessor control 86−6657
photovoltaic pumping stations, adaptation and control technique for automatic optimal control *(Italian)* 88−30624
PICA conf., San Francisco, California, USA (1985) 86−52117
planning and operation fns. research for large-scale systems 88−61792
planning process for Ontario Hydro power system control centre 86−70633
Poscodam PC network calc. program for load flow and short-circuit currents *(German)* 88−23446
power application software from Brown Boveri, benefits to user 87−42312
power distribution control, innovations and trends *(German)* 86−6227
power electronic systems, optimal control using microprocessors *(Spanish)* 85−59628
power facilities, characts. and supervisory control in Seikan railway tunnel *(Japanese)* 87−79023
power plant simulation, conf., San Diego, CA, USA (Feb. 1988) 88−70027
power supply units, high availability *(French)* 86−39968
power system automated distribution, economics, two way carrier communications system 86−25527
power system generators, steady state stability studies 86−61005
Power Systems Computation, conf., Helsinki, Finland (August 1984) 85−39412
power-dispatching microcomputer-based remote control device system design *(Chinese)* 87−50879
power-factor correction equal-tap capacitor control: modeling and solution 86−70602
PowerStat information and control system for electricity prepayment 87−78219
preventive control of power system security and economy by pattern recognition 87−4268
process computer equipped power system control centre, data model *(German)* 85−9422
program for energy and cost management of water supply 87−30070
project engineering study of power network supervisory system *(German)* 88−54895
project management and contract sharing for computer aided distribution network control system *(German)* 85−64891
PROLOG utilisation feasibility for power system restoration 86−18674

power system computer control continued
Property Services Agency (London Region) savings from computerised energy control 85−53933
protection application policies of ESCOM of South Africa 85−64963
public utility system, microcomputer appl. for financial modelling 87−50672
quality assurance and control room design methodology 86−44913
quality of control, eval. *(Czech)* 87−57512
radiotelemetry for cost effective remote control, monitoring and energy management 86−44904
rail traffic systems, computerised organisation and central *(German)* 85−32767
RATEL−Escom's new telecontrol system 88−23318
reactive load and reserve calculation in real time computer control system 88−10769
reactive power control and simulation for elec. utilities 85−53280
reactive power/voltage control, expert system for decision making 87−4265
real power generation control systems in elec. eng. *(Korean)* 88−23750
real time computerised energy management systems for electric utilities 85−43545
real time control of a large electric power system *(Italian)* 86−18656
real time data transmission network for the control of the French power system 87−71593
real time security optimisation method 86−70616
real time simulation for online control algorithm verification 87−4309
real-power controller for large power pools, plant power delivery control *(Russian)* 88−61823
real-time colour display for SM4-20 computer-based centres *(Czech)* 87−50654
real-time constraint determ. *(Russian)* 87−71534
real-time control of reactive power dispatching using multi-objective LP 87−71525
real-time data acquisition and control of model power system, microcomputer based 87−78015
real-time energy management systems integration for power system control 86−70635
real-time network security anal., progress 87−71572
real-time operating software for microcomputers in powersystem applications 86−6276
real-time power system control using online monitoring of system freq. 88−48511
real-time voltage VA monitoring, control, reactive power control and communications strategies 86−70630
realistic power system modelling in control centre laboratory 87−4272
regional power dispatching automation in China *(Chinese)* 88−30269
regional power dispatching automation in China, state-of-the-art *(Chinese)* 88−30268
regional power dispatching automation in Shanghai, planning, telecontrol devices *(Chinese)* 88−30270

digital power system stabilizer design using parameter plane method 87−64077
digitally controlled real-time, analog power system simulator for closed-loop protective relaying testing 88−55083
direct load control, computer simulation of costs and benefits 86−56338
direct load-control expts., aggregate data transferability model 86−61062
direct power system stabiliser design for optimal performance of multimachine systems 87−71583
direct power system transient stability analysis with detailed machine models 88−23370
discretely controlled plants in contemporary power systems, operation optimisation *(Russian)* 87−64047
distributed data processing structures in power systems: impact in power electronic application 87−57568
distribution automation economic evaluation 87−9134
distribution feeder loads forecasting, modelling, volt/VAr control 88−48558
distribution feeder reconfiguration and volt/VAr control in normal operating conditions 87−78105
distribution line section switch remote control equipment *(Japanese)* 87−71557

power system control continued
distribution lines, feedforward control of dynamic reactive power compensation 86−6352
distribution network automation 85−9485
distribution network automation, economic viability 85−38501
distribution network control system, characterisation by quality of observation *(Russian)* 86−56420
distribution network control system for remote control fault location and remedying 87−21913
distribution network employing fault condition data, working control *(Russian)* 86−50980
distribution network security improvement *(French)* 87−78078
distribution networks, galvanically connected components, voltage tracing independent of network topology and switched state *(German)* 85−27034
distribution networks, operation and control in the 1990s 87−42457
distribution networks, optimal regime parameters determ. 87−64142
distribution networks, remote control of circuit breakers *(Russian)* 87−4366
distribution networks, three-phase, central automatic control schemes for phase-balancing equipment *(Russian)* 86−25576
distribution networks, voltage regulator selection 88−61920
distribution networks in rural areas, power supply reliability *(Russian)* 87−4367
distribution networks optimal control of reactive power and voltage 87−71662
distribution substation integrated control and protection system 86−56921
distribution substations, integrated digital systems for control and protection *(Slovenian)* 86−39121
distribution system control, multicriterion optimisation by principal-component method *(Russian)* 86−56417
distribution system reliability eval. respecting control and protection system 88−42847
distribution systems, automation, control systems, remote monitoring and control *(Japanese)* 88−61850
DMS I telecontrol equipment for power production and distribution *(Czech)* 85−59629
duty-control problem simulation, systems approach 85−59555
dynamic behaviour, stability anal. *(Chinese)* 85−15478
dynamic behaviour control, statistical method 85−21119
dynamic control, reduced-order models, based on controllability and observability 87−64068
dynamic electronic pricing, effects on power system monitoring and control 86−70738
dynamic estimator performance 86−70626
dynamic modelling for retaining selected portions of interconnected power networks 88−36779
dynamic stability control using stabilising signals 86−39008
dynamic state estimation, abnormalities detection and identification 86−6281
dynamic utility integration of electric utility distribution network 86−39060
dynamical model of the electric power system *(Croatian)* 85−38420
economic load dispatching for power system control, computer algorithm development 85−59605
Egypt's National Energy Control Center−power system control and communication system, hardware and software 85−9447
Egyptian interconnected two-area power network, decentralised control 88−5316
eigenvalue problems, large scale, conference, Oberlech, Austria (July 1985) 87−30106
eigenvalue sensitivity minimisation to operating conditions 88−5253
eigenvalue-eigenvector use in stability studies 87−30107
electric power management and distribution for air andspace applications 86−38892
electric power plants and systems, large-scale system stable control 88−23367
electric power system, reactive power generation optimisation, Han-Powell algorithm appl. 85−26998
electric supply system power frequency control in system interconnection *(French)* 86−56321
electrical power plant emergency operation, effects on power system freq. transients control 87−71594
electrical power system, extremal states control, simulation model *(Russian)* 88−36791
electrical power system behaviour control during slight perturbations using statistical-probabilistic method *(Russian)* 88−23315
electrical systems, qualitative methods for local flow *(Spanish)* 85−26945
electricity power supply system development, artificial intelligence approach 88−54963
electricity supply industry controlling functions in communal utilities *(German)* 86−25481
electricity take-off control as an integral part of the electric power system *(Czech)* 87−57515
electricity-board control room communication systems for distrib. network monitoring and control 87−57560
electro-optical power pickup control-coordinate system for power transmission line *(Russian)* 87−78217
electronics in mining, conf., Randburg, S Africa (Sept. 1984) 85−39434
Elsam's radio monitoring network for HV power transmission networks *(Danish)* 86−12366
emergency control, information selection based on team decision theory 86−44876
emergency control algorithm for real-time appls. 85−64821
emergency control methods *(Russian)* 87−4241
emergency control of inter-system coupling *(Russian)* 86−18676
emergency control practices 86−6240
emergency control scheme for power systems using variational principles *(Russian)* 88−48487
emergency detection and control, research project 86−50898
emergency power supply, control and checking switchboard with parallel automatic starting of standby generators 87−15234
emergency regime control based on fuzzy set theory 88−75109
emergency rescheduling by network flow method 86−70624
emergency voltage reduction, quadratic model 85−48555
energy consumption control using ripple control system *(Czech)* 88−23307
energy cost reduction of power distribution control systems *(German)* 86−6228
energy demand, active control *(Russian)* 88−48490
energy demand control in power systems, comparison of control methods *(Russian)* 87−15184
energy demand control processes modelling using computer *(Russian)* 87−35572

power system control continued
energy demand equalization using user-regulators in Lithuanian Power System 86−65633
energy management, communication schemes and system structures 87−15144
energy management system, electronic, teaching design methodology 88−30327
energy management system of power system control centre, integration of load management 87−30059
energy savings by load control *(Italian)* 88−17056
energy supply system reorganisation *(Dutch)* 87−30076
energy-demand control in factories using situational approach *(Russian)* 87−4240
equivalent models of transmission lines for power system operational control *(Russian)* 87−35571
equivalent single-machine infinite-bus system natural modes and stability 86−56383
event handling and review information in power control systems 86−70625
factory electricity demand, economics of introducing complex control *(Russian)* 87−77996
fast stability test algorithm and stabilisation scheme 85−64939
fault indicators and remote switching to cut outage time by 50% 88−55058
fault limitation automatic control, economics improvement *(Russian)* 87−9099
fault sectioning for maintaining stability *(Russian)* 86−44878
fault-limiting automatic-control system used during active power shortages *(Russian)* 87−15183
fibre optics appl. to power system protection and control 86−37901
French power system, reactive power compensation and voltage control of large meshed networks 88−68830
frequency and power regulation to reduce power failures *(Danish)* 85−26968
frequency control for AC power systems interconnected via HVDC tieline 86−12320
frequency control of HVDC transmission links, using control system CAD 85−32116
frequency response eval. of state space designed controllers 88−48505
frequency-dependent load limiting of power systems *(Hungarian)* 88−54942
fuel resource scheduling in energy management system 86−50905
functional control centre design 87−71575
fuzzy set theory appls. 87−72943
GAMMA 10 tandem mirror operating and control system *(Japanese)* 88−43160
generation-consumption matching with AFC *(French)* 86−44890
generator tripping system for transient stability, emergency control 86−65635
GENESIA, expert systems as operational tools for software engineering in electricity generation control/alarm systems *(French)* 88−61838
gold mines in South Africa, electrical energy management for reduced consumption and losses 85−44363
governor/exciter stabilizer design in multi-machine power systems 87−9090
grid restoration studies modelling 87−35563
Hamiltonian techniques appl. 87−4298
Hellenic interconnected power system, dynamic performance of excitation control schemes 86−50896
Hellenic interconnected system, power system stabilisation via parameter optimisation 87−77981
hierarchic management of interconnected power system extraplan loads 87−9094
hierarchical optimisation appl. 85−26997
hierarchical telecontrol system for district and central control for power transmission and distribution 86−70647
High technology in power industry conf. Montana, USA (Aug. 1986) 87−65078
higher harmonic current control by active filter *(Japanese)* 87−30081

information theory in power system automated control *(Russian)* 86−32663
injected power method for contingency analysis 86−61008
integral load frequency controller with time-varying weighting coefficients 85−43516
integrated AC/DC power system control, transient stability of active and reactive power modulation 85−59611
integrated control of turbine and excitation 87−71544
integrated multiple access radio network system for electric power utilities 86−49491
integrated network topology optimization and generation rescheduling for power system security applications 88−68789
integrated network topology optimization and generation rescheduling for power system security applications 87−78009
integrated operations management systems for Davos electricity supply authority 85−15509
integrated power system, planning, design and construction by TMPA 85−48511
integrated real-time closed-loop controller for normal and emergency operation 86−50837
integrated real-time closed-loop controller for normal and emergency operation 86−56368
integration of instrumentation and control, conf., Greenville, SC, USA (May 1988) 88−55836
Intelsat satellite power subsystem using solar arrays and Ni-H_2 batteries, control 85−48420
INTELSAT VI cradle/carrier power distribution andcontrol for Shuttle launches 86−32483
inter-system communications/networking 88−30316
interconnected, PF control based on deadbeat controller, multivariable structure system approach 87−71542
interconnected elec. energy systems, decentralised load-freq. control 88−23371
interconnected electricity supply systems, optimal two-level control method *(Spanish)* 86−32650
interconnected multi-area power system, generating unit commitment for optimal economic dispatch 87−42372
interconnected power networks, control algorithms for static VAr systems *(French)* 87−15197
interconnected power system, decoupled internal state estimation using external system equivalents 87−35561
interconnected power system, high gain feedback design applied to automatic gain control 88−17044
interconnected power system control, carrier-frequency communications for transmitting signals *(Russian)* 86−39025
interconnected power system frequency and tie-line power flow correction with real-time identification *(Chinese)* 87−50632
interconnected power system load-frequency control, multi-input multi-output decentralised servocompensator approach *(Chinese)* 87−50679
interconnected power system synthesis control for power transfer capability enhancement 88−68827
interconnected power system transfer function determ., characteristics identification 87−30082
interconnected power systems 87−57542
interconnected power systems, adaptable freq. and power equilibrium control structure *(Czech)* 87−57510
interconnected power systems, control performance auditing, test results 88−10763
interconnected power systems, control performance auditing 88−10762
interconnected power systems, decentralised control strategy for dynamic shunt VAr compensation 86−6233
interconnected power systems, disturbance stability assessment using energy function methods 86−44910
interconnected power systems, large deviation theory for stability against voltage collapse 88−48515
interconnected power systems, load frequency control behaviour with governor dead-bandeffects 86−70613
interconnected power systems, load frequency controller design using modal techniques 88−68799
interconnected power systems, optimum decentralised load freq. control 85−21133
interconnected power systems, predictive integral and self tuning regulator for load frequency control simulation 86−12311
interconnected power systems, real power control, sensitivity *(Russian)* 86−44837
interconnected power systems, static response coefficient identification *(Czech)* 87−57511
interconnected power systems, two-area anal. of system time error and inadvertent interchange energy 85−64823
interconnected systems, decentralised self tracking control 85−32097
interruptible loads dispatching, hourly and seasonal experience of Minnkota Power Cooperative Inc. 85−38435
intersystem tie lines, controllability estimation *(Russian)* 88−68792
intervention power and inherent control capacity of a coal-fired BC-100 power unit under emergency conditions *(Polish)* 86−19098
invertors in power supply systems under small perturbations, transfer functions *(Russian)* 85−65314
isolated power system security, generating unit response improvement 86−70622
isolated power systems, near-optimum control plans for fault situation prevention *(Russian)* 87−15186
large interconnected dynamic system optimal control location determ. 87−57573

power system control continued
large-scale, decoupled stability anal. using integral manifold approach 87−57574
large-scale centralized supervisory control system 85−26981
large-scale power systems, excitation control design by using dynamic equivalencing technique 86−6256
large-scale systems decentralised control and stabilisation 85−38439
large-scale thermal power system economic dispatch control model 86−39040
Leasecraft spacecraft power system 85−59395
limit distribution among consumers, game-theoretic approach *(Russian)* 88−10740
linear large-scale, energy decoupling, block diagonalisation 88−36790

partial and postponable outages, effect on power system reliability, Markov model 87−50693
peakload management on customers premises using automated continuously operating generators 88−48510
performance monitoring and evaluation, offline and real-time *(Japanese)* 87−78475
phase-shifting transformers for network power flow control *(Russian)* 87−30034
photovoltaic, control aspects, overview 85−15935
photovoltaic 2 kW residential power system interconnection with utility grid 87−64485
photovoltaic power generation effects on interconnected power systems 85−43900
photovoltaic power system design for telecommunications, control 86−61434
photovoltaic systems, effect on utility operations 86−6650
Poland, radio distribution of control signals and standard time signals in electric power systems *(Polish)* 88−53148
pole-placement and model-order reduction techniques applied to a hydro-unit-system for dynamic stability improvement 88−54928
power consumption levels and voltage conditions of Elektrodistribucija Beograd *(Croatian)* 87−42332
power electronics, conf., Gaithersburg, MD, USA (June 1984) 85−5644
power supply industry, bivalent use of electricity and fuels in space heating 86−50885
power system security anal. using contingency selection, transmission line flow 88−23362
power system stabilisers optimal location identification 88−54874
power transformer regulating device reliability, allowance in power system regime optimisation 87−4281
process, stability determ. 87−50666
proportional-integral power system stabiliser, design 86−56331
protection and control for plant reliability at Water and Electricity Department of Abu Dhabi 87−21881
protection with automatic control for interconnected power systems, economic characts. *(Russian)* 85−48609
pulp/paper industry, conf., Houston, TX, USA, 1985 86−7345
pulse-type voltage stabilisers, local controllers synthesis, optimisation *(Russian)* 88−61865
pumped-storage stations, dynamic and static functions, relation with power system control *(Czech)* 87−57955
PWM double forward invertor module for grid-connected photovoltaic systems 86−45268
PWM inverter using high gain pulse-triggeredpower transistors and a new PWM control method 86−6904
radial configuration distrib. networks, voltage regulation by passive power outflow *(Polish)* 88−75153
reactive and active power control for voltage and thermal management computation 85−59615
reactive device automatic switching simulation in power system security analysis 86−32632
reactive power and harmonics reduction using self commutated AC/DC converters *(German)* 87−51357
reactive power balance anal. and control 86−6250
reactive power compensating system using repetitivecontrol method *(Japanese)* 86−12278
reactive power compensation and optimum control in power systems, models *(Russian)* 87−42325
reactive power control, optimal, via loss minimization and voltage control 86−18702
reactive power control and management, textured computational modelling 85−59614
reactive power control for real power loss minimisation using nonconventional LP algorithm 87−78014
reactive power imbalance, reactive power and voltage control 86−61035
reactive power problem for power network, uniqueness of soln. 85−27010
reactive security and optimality in real time 87−71579
real power optimisation for power system control in USSR, hierarchical model *(Russian)* 87−15170
real-time analogue simulator for power systems studies 86−6253
real-time optimal voltage control assessment 86−56333
real-time power system simulator using Floating Point Systems 5205 array processor 88−5288
recognition methods in optimum composition selection *(Russian)* 87−9104
reduction by electromechanical component approximation via internally dominant subsystems 86−6279
regional power system control problem analysis from user's viewpoint *(German)* 87−4243
relay automatic devices, real-time freq. meas. *(Chinese)* 88−48461
relay protection and automatic control systems current circuits, resonance phenomena *(Russian)* 85−59808
relaying and automatic devices, state-of-the-art for development 87−9215
reliability evaluation 85−64843
reliability of power systems, transmission, distribution, substations, protection and control 86−25488
remote control, HDO transmitter, transient phenomena in static frequency convertor-by-pass transformer circuit *(Czech)* 85−43527
remote control equipment for RK-1 network *(Polish)* 88−5267
remote control of power systems, phase-conform keying of parallel transmitters *(Czech)* 88−35000
remote monitoring and control, appl. of electronics 85−15508
residential load control and metering, costs and capabilities 88−17080
robust controllers, decentralised design 87−71538
robust decentralized load frequency regulator forinterconnected power systems 85−64841
power system control continued
rural power network control improvement, effect estimation *(Russian)* 88−36770
sampled data load freq. controllers design, parameter plane approach 86−56344
satellite power systems using solar cell arrays, subsystem control loop stability anal. 85−48444
SCADA and load management by radio 88−23317
secondary voltage control, EDF automatic system *(French)* 86−44889
secondary voltage control in France 87−57549
security, supervisory control and protection concept 85−26930
security anal. functions in power system control centres, critical review 86−70614
security analysis and optimisation 88−30314
security assessment and control system: corrective strategies 85−48541
security control, ϵ-optimal generation schedule using iterative procedure 85−21135
security control actions to compensate HV insulator leakage current in polluted media 88−23361
security control and optimal pricing of electricity 88−10738
security dispatch model accepting temporary overloads *(French)* 86−50811
security management in online environment control centre operation 86−70615
separated power system overvoltages, stability control 87−50659
series capacitor compensated power system stabilisation by eigenvalue control 86−25494
series resonant based invertors for aerospace applications, generalized control and protection 85−49027
Sfikia (Greece) pumped-storage power project 88−69220
Shinkansen electric power control system 85−65497
short-term operation of hydrothermal systems, Dantzig-Wolfe decomposition scheme 87−71604
Siberian power pool, training aid for load dispatchers *(Russian)* 87−15164
Slovak power system control, standard time and its utilisation *(Slovak)* 86−44841
SMES with active filter, charging and discharging characts. in transmission system 87−72460
Solamax tracking device for photovoltaic generator systems management 86−45681
solar energy systems, observability 88−11403
Space Station Power System Advanced Development Program 86−32459
space station power systems, autonomous systems 85−48409
spacecraft, high power, invertor topology eval., control strategy 87−43217
spacecraft autonomous power managements, reference system and test facility design 86−32473
spacecraft power plant system parameters optimisation, outflow rate determ. *(German)* 87−71258
spacecraft power system design, autonomous methodology 85−48412
Spanish power grid, control system *(Spanish)* 85−48514
stabilisation, dynamic output feedback controllers design 86−39035
stabilisation, eigenvalue control by operating point optimal setting 88−36753
stabilisation, self-tuning of conflicting oscillatory modes 88−48506
stabilisation and voltage regulation, feedback linearisation techniques 86−56384
stabilisation by control-effort and response-time minimisation 86−32682
stabilisation by SMES four-quadrant active and reactive power control 87−71735
stabilisation design using damping and synchronising torques 87−42395
stabilisation using Lyapunov function 86−32653
stabilisation using superconducting magnet energy storage *(Korean)* 86−18732
stabiliser synthesis using decentralised modal control algorithm 87−77979
stabilisers for LF oscillations damping 87−71586
stabilising signal derivation, multivariable freq.-domain/time-domain approaches 86−65650
stability, discrete supplementary controls, bibliography 87−57547
stability, eigenvalue control approach *(Japanese)* 88−17067
stability anal. of multimachine power system, improved pairwise decomposition aggregation approach 85−26987
stability by eigenvalue control of power systems with static Var compensators 87−9077
stability control, robust regulator synthesis *(Chinese)* 88−23360
stability control apparatus for power systems *(Chinese)* 86−18660
stability control using SMES 86−39019
stability control using static VAr compensators, computer simulated anal. 85−48519
stability controller, integrated adaptive control 87−71522
stability controller, integrated adaptive control, field tests, simulation 87−71523
stability enhancement, coordination of excitation and governor controls 86−50833
stability enhancement anal. using static VAr compensators 86−50919
stability enhancement by control of static VAr compensators 87−30060
stability investig. using catastrophe theory, effect of automatic excitation control 88−5664
stability/control of interconnected power systems, current issues 86−56385
stabilization of the Israeli power system by local control 86−32693
stabilizer, for low frequency oscillations damping *(Chinese)* 85−15493
stabilizer control strategy, steady-state stability anal. 88−68826
stabilizer design using alternative pole assignment 88−23392
stabilizer design using least integral square-mean algorithm 87−71521
stabilizer design using time domain method 88−5256
stabilizer parameter automatic setting *(Croatian)* 88−42773
state estimation, observability, error detectability and identifiability analysis *(Chinese)* 86−39045
state estimation program, operating experience *(Hungarian)* 86−25507
state estimation simulation package for optimal online solution 86−50838
state estimation simulation package for optimal online solution 86−56372
state-of-the-art technology, book 86−57079
static and dynamic voltage instabilities at system load buses 88−23471
static compensators for real and reactive power in power systems *(Russian)* 88−36736
static devices for variable reactive power control andload compensation *(Italian)* 86−44868
static electrical converters, switching, large signal command *(French)* 86−39969
static stability investigations, mathematical descriptions 86−25480
static VAr compensator of AC system with HVDC installation, control modelling and simulation 86−50892

power system control continued
static VAr compensators in transmission systems, control strategies 86−65610
static VAr compensators with fast acting control scheme 87−9078
Static VAr system for voltage control, American Electric Power experience 86−32673
static VAr system for voltage control, equipment design and installation 86−32674
statistical analysis of telemetered values, in power system meas. and control *(Czech)* 87−21990
STC/DBS power subsystem end-to-end stability margin 87−42151
steady state and transient behaviour *(German)* 85−38413
steady state calc. using nodal voltage eqns. for complex power systems *(Russian)* 85−59620
steady state stability after system fault clearance 86−18739
steady-state conditions an aperiodic stability limits *(Russian)* 86−6219
steady-state security analysis against generation and load disturbances 86−12301
steady-state stability and EM transient processes *(Russian)* 86−6216
steady-state voltage stability anal. 85−53283
steam power system, optimal load frequency control with governor backlash 85−43551
steam turbines starting by measuring thermal forces, simulation and control *(Spanish)* 88−69167
stored energy vacuum switchgear for distribution network protection automation 85−16160
superconducting magnet energy storage system, control using GTO converter 85−38451
superconducting magnetic energy storage, solenoid-type shield coil system 87−38711
supervision and control centre design and functioning 86−18666
supervisory control systems, Brown Boveri, past, present and future trends 85−26928
supervisory control systems and user requirements 85−26929
supply and operation technology *(Korean)* 88−23358
supply network control and monitoring, new approach *(German)* 85−38412
switchgear plant control tasks and data flow aspects *(German)* 87−4839
switchgear plant control technique with secondary task decentralisation *(German)* 87−4840
switching operations, as a means of power system control 85−43549
switching power regulators, expanding and demanding markets 87−22530
synchronous clocks for power system fault location, control and protection 86−32872
synchronous generator, robust nonlinear state observer 88−5663
synchronous generator stability and types of excitation control *(Croatian)* 85−65236
synchronous generators, adaptive microprocessor stabilisers, expt. studies 87−72130
synchronous machines, controller design using model control principles 85−4556
TCR static VAr compensator for Paraguay, design and appl. 86−12324
telecontrol for SWEB, system operation and training 87−4304
textured model-algorithm for computationally efficient dispatch and control on the power system 87−57571
thermal power plants, control in relation to power system freq. control *(Croatian)* 88−5515
three phase AC system transformations and their implementation in silicon 88−5815
three-machine systems, transient stability region estimate 88−48452
thyristor and SCR appl. *(Spanish)* 88−30819
thyristor controlled shunt compensator for power systems, gain controller 86−51780
thyristor-controlled static phase-shifters, performance anal. 87−42317
thyristor-switched reactive power compensator, cybernetic model of phase control system *(Russian)* 88−30302
tie line bias control and demand fluctuation *(Japanese)* 85−4534
tie line viabilizing during emergency control *(Chinese)* 88−30307
time-lagged control systems, identification method, power system example 86−50819
Tohoku Shinkansen express railway, power transformation facilities and control *(Japanese)* 86−7240
totalized stabilising policy, pseudo-inverse matrix technique *(Japanese)* 86−39054
training aid for power pool operating staff, simulators of regulators *(Russian)* 87−15165
training simulator for educational aid 87−71513
transferred power and self-adjusting frequency controllers simulation *(Czech)* 87−57509
transformation decoupled estimator for power system state estimation 85−59641
transformer substations, development requirements for control, protection and automation techniques *(German)* 88−17792
transient calcs. allowing for automatic regulators 87−50668
transient control 87−57575
transient quality indicator, search for optimal controlling reactions *(Russian)* 88−10741
transient security enhancement using pattern recognition, preventive control scheme 86−39018
transient stability, suboptimal controller appl. 85−9431
transient stability anal. and voltage collapse, models 86−56314
transient stability anal. including emergency control schemes 88−68819
transient stability anal. using Lanczos procedure 87−30108
transient stability anal. using pattern recognition methods 88−48512
transient stability effects on power systems planning 87−42412
transients due to accident stabilisation *(Slovak)* 86−50828
transmission line losses minimisation and voltage profile improvement by control variables adjustment 87−57636
transmission link overloads during emergencies, rate allocation control, simulation testing 85−15664
transmission network decoupling, load shedding and automatic network restoration due to disturbances 86−50953
transmission network planning, reactive power considerations 86−12369
transmission network reactive power and voltage control *(Hungarian)* 87−50653
transmission networks, hierarchical centralised supervisory control and data acquisition system 86−50961
transmission networks, voltage/loading violation adjustments, cluster size reduction 85−53301
transmission process control in a power system by the excitation of synchronous machines and output turbine control *(Slovak)* 85−21079

power system control continued
transmission system rational control condition formalisation, vector matrix description *(Russian)* 86−44946
transmission system reactive power and voltage control, bibliography 87−57541
transmission system security assessment 85−53281
transmission systems, static VAr compensator for voltage support 86−50959
turbogenerators, model reference adaptive control appl. 85−64848
TWACS two-way power line communication technology for distribution network control 86−39125
two-level power systems, state estimation using LP algorithm 88−42765
unbalanced power systems, modelling for supervisory monitoring and control 85−15527
unbalanced power systems, passive control device modelling and representation 86−12236
under frequency load shed relays 86−44912
unit commitment problem, dynamic programming model for power system control 87−64041
unit commitment program for fuel allocation and security constraints 86−50906

user-oriented power system control 87−71589
utility cogeneration programmes, commercial, regulatory and operational aspects 85−53271
utility dispatch control centre CRT display design handbook preparation 87−64094
utility dispatch control centre efficiency, potential for speech recognition and synthesis 86−50878
utility substation data modeling 87−9072
utility-interactive photovoltaic power conditioners:effects of transformerless design and DC injection 85−53633
voltage and reactive power control in large power networks 85−64833
voltage and reactive power flow control in power systems *(Czech)* 87−57513
voltage collapse model treating dynamic voltage stability as fn. of load 88−42802
voltage control and emergency measures *(French)* 86−44888
voltage control schemes for CEGB, ENEL and EDF 88−48516
voltage profile optimization on the daily schedulingand in the VAR planning for an electric powersystem *(Italian)* 86−18658
voltage regulation, quality characts. selection 86−50852
voltage regulation stability at load buses using automatic load tap changing transformers 88−23430
VVER 440 Czechoslovak nuclear reactors, control and protection systems *(Czech)* 85−59928
Vyborg convertor substation in linkage between power systems of USSR and Finland *(Russian)* 86−39920
warning and advisory system for Hungarian power system *(Hungarian)* 88−5264
weak AC system interconnection to HVDC link, hybrid inverter 88−48463
wide area communication networks for power system control *(Japanese)* 88−60158
wide-range power system pole placer 88−48478
wind power generation effects on power systems, control and unit commitment 85−60101
wind turbine generator control system anal., hybrid simulation 85−27368
Yugoslav network operation with underexcited power plants, voltage and reactive power regulation *(Croatian)* 86−39033
Yugoslav power system blackout (1986 Aug. 1), reflections *(Croatian)* 87−77973
Zambelli (Italy) photovoltaic fresh-water pumping station 86−45271

power system interconnection
1 MV central station photovoltaic power plant, utility interconnection experience 85−60074
2 GW cross-Channel link between France and Britain *(French)* 87−50682
2 GW HVDC link under English Channel 87−78074
8 GW/2400 km alternative DC power transmission for Brazilian Amazon Basin, planning and interconnection 86−12385
30 MJ superconducting magnetic energy storage unit for Pacific HVAC Intertie wastable oscillations damping 85−53859
50 MW, 90 kV AC power transmission link between Jersey and France 86−12317
230 kV interconnection project, Jamuna River crossing, Bangladesh, design aspects 85−9435
230 kV interconnection project, Jamuna River crossing, Bangladesh, construction problems 85−9436
270 kV DC oil-filled cable for UK-France power system interconnection, design and testing 85−21210
330 kV protection system duplication and segregation, Snowy Mountains Hydroelectric Authority 87−15366
380 kV network of West German joint network, planning and construction *(German)* 86−18769
380 kV substation disturbance recording and network monitoring system RIPES *(Dutch)* 87−78208
380kV overlay system and substations for Riyadh (Saudi Arabia) 87−21864
400 kV overhead line for Austrian and Yugoslav power system interconnection, reliability improvements *(Croatian)* 88−42779
500 kV oil-filled cable, laminated paper insulated for transmission line interconnection *(Japanese)* 87−71678
500 kV Urals power pool, centralised automatic fault clearance control system *(Russian)* 86−32811
750/400 kV Isaccea transformer substation for power system interconnection *(French)* 87−50635
1150 kV intersystem tie line stability, electrical fault containment control *(Russian)* 87−15167
1150 kV transmission line open-conductor operation for system interconnection 88−23314
2000 MW DC interconnection link between France and UK, French convertor station 86−50881
2000 MW DC link between France and England, integration in French AC power system 88−68910
2000 MW France-UK HVDC link, submarine cables, cable laying and design features *(French, English)* 86−18721
2000 MW HVDC cross channel link, integration with British AC system 86−18719

power system interconnection continued
2000 MW HVDC cross channel link, integration with French 400 kV AC system *(French)* 86−18718
2000 MW HVDC Cross Channel Link, static compensators installation 86−12390
2000 MW HVDC cross-channel link, land and submarine cable protection *(French, English)* 86−18725
2000 MW HVDC cross-channel link, Les Mandarins power convertor station *(French)* 86−18724
2000 MW HVDC cross-channel link and associated 400 kV substation, French control system implementation *(French)* 86−18722
2000 MW HVDC cross-channel link control system, convertor compatibility *(French)* 86−18723
2000 MW HVDC link between England and France, submarine interconnection *(Chinese)* 87−4357
2000 MW HVDC link between France and UK *(French)* 86−18717
2000 MW HVDC link between France and UK, operating principles *(French)* 86−18720
AC and DC power transmission, IEE conf., London, England (Sept 1985) 86−12500
AC bulk power transmission systems, interconnected by HVDC link, planning 85−32108
AC filtering and overvoltages of interconnected HVDC and AC systems 86−50880
AC power flow computation by Gauss-Seidel; sparse matrix technique 86−44943
AC power source and solar cell, automatic interconnection 85−64853
AC power systems interconnection scheme, viewed from reserve capacity interchange 85−32068
AC subsystems interconnected by DC transmission systems, mathematical model *(Russian)* 87−77995
AC system overvoltages for Oklaunion and Walker County-STP HVDC projects 86−12370
AC transmission line stabilisation using SMES 88−75175
AC transmission networks in USSR, new voltage level 86−39107
AC-DC interconnected power systems, reliability evaluation scheme 86−61082
AC/DC 3 area system, optimal modulation controllers, design using eigenvalues sensitivities 87−77978
AC/DC integrated power system transient simulation 88−54854
AC/DC interconnected power systems, load dispatch method using LP 88−68815
AC/DC transmission system, state space eqn. model 86−39094
active P-Q equiv. theoretical representation *(Croatian)* 88−10754
active power and frequency variations, probability model 85−38422
active power flow limitation, automatic nonlinear system input extrapolation criteria *(Russian)* 86−56341
active-power reserve siting, energy underdelivery 87−35569
adaptable freq. and power equilibrium control structure *(Czech)* 87−57510
Africa, comparison to USA in intersystem coordination procedures 88−68839
aggregation of interconnected systems 86−6237

power system measurement
35 kV overhead power lines, remote controlled protection with fault location meas. *(Russian)* 86−32779
1150 kV overhead power lines, expt. study of high frequency parameters 86−51058
2370 series power line transducers *(Japanese)* 87−8622
AC and DC HV system, zero-flux current transformer for wide-band precision meas. 86−12528
AC distribution networks, conducted EMI meas. using line impedance stabilisation network 88−48566
AC mains voltage disturbances recording using oscillographs 88−48619
AC networks, three-phase, parameter meas. system *(Russian)* 86−12525
AC power disturbances generation , diagnostic capabilities 88−75229
AC power lines in computer and industrial environments, computerised surge monitoring and meas. 86−18800
AC power systems, microprocessor-based monitor design criteria 86−45037
anomalous load data, automatic detection for households 87−42544
antifault automation device 87−9229
asymmetry meas. of three-phase voltage systems, using digital methods 85−48635
automatic load monitoring and charge counting system of East China Power Network *(Chinese)* 88−61810
automatic metering and monitoring of energy flows *(Russian)* 86−12520
blocking device for swinging in power-drop registration 87−9084
busbar cables, dynamic load meas., short circuit current data effect *(German)* 86−32756
card operated prepayment meters, East MidlandsElectricity Board experience 86−39067
CEGB CETAS-D microprocessor metering data collection and processing system 86−32875
cement plant equipment grounding and harmonics 85−15688
centralised power monitoring 87−71756
CETAS-D bulk supply point metering data acquisition system 87−50892

power system measurement continued
coaxial cable plug system for MV overhead line meas., connections and tap off 87−42506
computerised harmonic analyser 88−61997
computerised monitoring and control system for power system demand *(Russian)* 86−65624
computerized high-power testing laboratory, integrated hardware and software system 88−61990
condition-dependent maintenance practice *(Dutch)* 88−55924
conditioning anal. using DMMs 88−48617
conference, London, England (April 1985) 85−60665
continuity and phase tester, ELAZI 2000 *(German)* 87−14366
current and voltage transformers of RGW, comparison of measurements *(German)* 86−19329
current transformer for power transmission line meas., equivalent circuit and basic equations *(Russian)* 86−25664
daily load patterns digital analyser *(Russian)* 87−78211
data collection and manipulation for small consumers[power system measurement] 86−32876
data processing in meter reading for electric utilities *(German)* 87−4461
demand-side management, new meters for new tariffs *(French)* 87−35702
digital impedance relay measurements, accurate fault location estimates 85−65010
digital measurement errors of power system variables, use of Lotus 1-2-3 spreadsheet 87−35703
digital measurement technique for determining powersystem frequency 86−32873
digital panel instruments with inbuilt transducers for power line measurement *(Japanese)* 86−6449
distribution network load measurements using computer-based evaluation and decentralised data processing 87−35700
distribution networks with insulated and compensated neutrals, phase-voltage analyser *(Russian)* 86−39248
distribution power lines, lightning induced voltages meas., expt., 86−6424
distribution power system current/voltage harmonics and distortion meas. 87−71760
distribution surge arrester, lightning discharge current measurement 86−6438
distribution system current sensor, frequency domain modelling 87−15395
distribution system parameters meas., using universal microprocessor-based meter 88−60818
Dranetz 656, line disturbance analyser *(German)* 87−77167
Durnrohr HVDC convertor station, AC side, harmonic distortion, digital calculation and field meas. comparison 86−12527
dynamic electronic pricing, effects on power system monitoring and control 86−70738
electric energy consumption survey system *(Romanian)* 88−61989
electric power cost reduction and power anal. in wastewater treatment plant 86−70734
electric power tariff fixing, comment *(Russian)* 87−4463
electric power tariff fixing, three-rate charges, comments *(Russian)* 86−65787
electrical energy consumption meas., microcomputer station database organisation for data acquisition 88−42908
electrical energy management using microcomputer technology 87−30067
electrical energy supply meters, designer's point of view *(French, German)* 88−29516
electricity charge meas. apparatus, tariffs, cost structure, European practices *(German)* 88−36897
electricity charging and metering methods in early years 86−25505
electricity consumption in industry, operative meas., cut-off power calc. using MK-56 microcalculator *(Russian)* 87−21871
electricity meter theft prevention, Home Office perspective 86−39070
electricity tariff structuring for industrial and domestic sectors in Hong Kong 86−61037
electro-optical power pickup control-coordinate system for power transmission line *(Russian)* 87−78217
electronic meter reading in practice *(German)* 87−4462
electronic multifunction electricity meters *(Japanese)* 88−60807
electronic prepayment token meters 86−39063
electronic recording ammeter developed for distribution lines up to 44 kV 87−15394
electronic time of use metering system, develop. 87−50891
EMC, electrical networks, phenomena and immunity tests 88−17145
energy data recording and transmission system, modular, microprocessor controlled, accounting appl. *(German)* 88−17211
energy impulse recorder, ERE-1, for electric energy consumption *(Polish)* 86−18896
energy management appl. of electrical metering 86−45038
energy management using electrical metering concepts 86−51158
energy monitoring and costs reduction in industry 87−42542
error detection and identification in power system state estimation *(Czech)* 86−45034
errors in electrical energy meas. *(Russian)* 86−32862
Faraday optical current sensor with monomode fibre for power system meas. *(French)* 86−65792
fast impulse voltage meas. systems principle and theoretical limitation 86−61204
fault detection of power equipment using radiated electromagnetic fields *(Japanese)* 86−12524
fault location using current and voltage fixing indicators *(Russian)* 87−4438
fibre optic hot spot sensors, distributed, sensitised polymeric coatings 88−16161
fibre optic sensors for power system elec., field and temp meas. 88−16152
flicker effects of voltage fluctuations, VIE/IEC measuring system *(German)* 86−38469
frequency and phase meas. of transients, problems and methods *(Russian)* 85−65002
frequency dependent parameters determ. *(German)* 88−17214
frequency deviation meas. using two-arm bridge 88−60856
frequency fluctuations meas. using FFT 85−65003
frequency meas. using microprocessor 87−30280
frequency oscillation meas. in power networks using observer-based filter *(German)* 88−23584
gas insulated substation equipment testing using impulse voltage measuring system 86−66213
gas-insulated switchgear, planar capacitive voltage dividers, EM resons. minimisation 85−43663
generating plant transient recording equipment 87−3418
power system measurement continued
ground fault current distribution and substation ground impedance meas. 86−65789
Hall effect meters for electricity meter replacement at Canon Elstree Studios 87−77197
harmonic detection and analysis instrument *(Chinese)* 85−65004
harmonic meas. and filtering 87−50637
harmonic meas. instrument, microcomputer-based 87−70513
harmonic measurement, computerised data acquisition systems 88−48620
harmonic measurement and anal. system, microprocessor based 88−48618
harmonics, meas. and anal. 86−39262
heavy electric energy consumers, meas. and logging equipment *(Polish)* 88−10921
HEMP excitation, measured power system response data extrapolation 88−75234
HF interference voltage meas. for fault location in power plant blocks *(German)* 86−18894
homeostatic control of power systems for improved pricing 86−70631
HV and high-power testing, IEEE recommended safety practices 85−49321
HV current meas. system development *(Croatian)* 88−61995
HV distribution substations, SYSTOR meas., protection and control system *(Czech)* 86−33487
HV measurement transformers, operating safety *(German)* 85−48621
HV networks, short-circuit impedance meas. procedures *(German)* 87−42543
HV networks, transient phenomena during switching operations, data acquisition system 85−59829
HV networks, transients meas. *(Spanish)* 88−10925
HV networks, voltage and current transducers for transients meas. *(Spanish)* 88−61996
HV noise meas. system for power line transients 85−64188
HV power systems, switching overvoltage meas. using pure capacitive dividers *(Italian)* 88−42904
HV transmission line current meas. by lightguide Faraday rotation *(German)* 86−65705
HVDC converter stations, arrester stresses and overvoltage protection coordination 86−12391
INDACTIC 65C system for recording and evaluating power system fault sequences 88−36896
industrial rectifiers installation, EM environment characterization 86−6852
information communication methods *(Korean)* 87−78213
inspection and testing developments 85−53364
instrument transformer errors determ., under operating conditions 85−48044
instrumentation for power system measurement, conf., London, UK (April 1988) 88−43610
insulation at working voltage, capacitance and dielectric loss meas. *(Russian)* 86−39249
insulation testing using direct current, instruments and procedures 85−59825
integrated harmonic simulation/meas. system, PC-based, features 87−71761
interconnected power system of Europe, computerised control and meas. system *(German)* 87−15174
interphase fault location instrument for 6 to 35 kV overhead lines *(Russian)* 86−32861
Ivorian power system, harmonic pollution level 88−17225
Kalman filtering appls. to power system meas. for relaying 86−32869
large electric power system stability monitoring, 2-stage technique 88−42907
LF meas., four digital schemes 88−60857
load meas., computer-aided evaluation using electronic data gathering equipment *(German)* 86−65786
low power supply meas. system 85−65007
LV metering, remote centralised control, role of electronics *(French, German)* 88−30424
M5010 digital display test unit, for testing electrical protective measures 86−24278
magneto optic current transducer for power distrib. system 87−68059
mains monitoring equipment to prevent computer failures 88−10924
mains synchronous sampling using phase control loop *(German)* 87−35701
mainsborne telecontrol in domestic electricity metering, encryption techniques, technology and trials 88−30423
measurement error decreasing in power system networks *(Russian)* 87−15392
measurement system research trends *(Korean)* 87−64212
metering and tariffs formulation, consumers point of view 87−50701
metering developments in France, research initiatives *(French)* 88−61988
microprocessor based complex waveform signal generator for protectiverelay testing 86−5334
microprocessor based power line analyser, μPHA-5 88−36899
microprocessor based power meas. *(Italian)* 86−70730
microprocessor-based HV-feeder protection package 85−65402
microprocessor-based protection and instrumentation for interconnected low voltage substation 85−65403
microprocessor-based symmetrical component analyser for power system analysis 87−21191
microprocessor-based XS92a test set for comprehensive testing of line protection equipment in field 85−65009
microprocessors for measurement and meter testing, conf., London, England (Dec. 1985) 86−26515
mobile data recording for consumption accounting *(German)* 85−37498
monitor operating characteristic deviation rel. to intermediate transformer dynamic props. *(Russian)* 86−56456
multi-rate tariffs and metering for industry and commerce 87−50711
multimicrocomputer device for metering and billing 88−5413
MV and LV power systems, computerised harmonic impedance meas. *(German)* 86−39253
network perturbations, anal. and simulation *(Dutch)* 87−50886
nonharmonic component meas. using FFT interpolation *(Italian)* 87−78210
optical fibre techniques 86−39247
optical voltage and current meas. systems 88−5412
optical voltage and current measuring system 86−39255
overhead distribution systems, monitoring and protection systems 85−64983
overhead line conductors, temperature monitoring at remote positions 85−59834
Pacific HVDC Intertie Upgrade Project, commissioning 86−12411
partial discharge meas. of HV systems using flexible meas. system *(German)* 86−12514

power system measurement continued
partial discharge measurements of HV apparatus using narrow and wideband methods *(German)* 86−6443
performance monitoring and evaluation, offline and real-time *(Japanese)* 87−78475
phase angle meter for power transmission line meas. *(Russian)* 86−32863
phase voltage meas., error correction using iterative methods 85−59827
PLL interface for microprocessor based meas. of power system signals 86−61202
portable instruments for electrical installations, IEE regulations implementation, quality, safety and performance 87−15397
portable instruments for electrical installations, IEE regulations, manufacturer and user considerations 87−15398
portable instruments for electrical installations, implementation of IEE regulations, 15th Edition, overview 87−15396
power consumption recorder and analyser, microprocessor controlled *(German)* 88−68729
power line disturbance recorder 85−53362
power line disturbance voltage meas., broadband network 88−75226
power line transfer capacity meas. using new 'power donut' 86−32758
power overhead line automatic pulse fault finders, operating range improvement *(Russian)* 86−32864
power system harmonic impedance meas. instrument 86−51169
power-dip meas. element for power system imbalance determ. during short-circuits 88−30289
PowerStat information and control system for electricity prepayment 87−78219
prepayment budget meters, appl. and future development 86−39064
prepayment meter usage in North Western Electricity Board 86−39068
prepayment metering in electricity supply industry, conf., London, England (Jan. 1986) 86−33952
prepayment metering in London, future developments 86−39069
prepayment meters, Midlands Electricity Board experience 86−39066
programmable electric energy dosimeter for reduction of thebilling cost in rural areas 86−70735
quality of electrical energy supplied by power system *(Polish)* 85−38592
real time digital power meter 87−49831
relay protection using microcomputer-based network meas. algorithms 88−69046
remote electricity metering using credit meters and load-limiting, one-way signalling 88−42903
remote load control and automatic meter reading system using telephone lines 87−42386
remote measurement calibration 86−51167
remote measurement calibration 86−61199
remote measurement of energy losses, influence of meas. intervals on accuracy *(Russian)* 88−17217
residential load control and metering, costs and capabilities 88−17080
rural electric power conf., Springfield, Illinois, USA, April 1985 86−33928
rural electricity supply, demand research using demand meters 86−12353
sampling technique for phase difference measurement at power frequencies 88−68836
security monitoring device for regional power network in China *(Chinese)* 88−61987
sequential sampling voltmeter for monitoring the voltagevariations in electric supply networks *(Rumanian)* 86−61203
signal transceiver for automatic power system relay protection *(Russian)* 86−65753
solid state electricity metering, problems, overall review 88−23586
state calc., power flow meas. based 87−57711
state estimation, allocation of meas. set to minimise estimation error *(Chinese)* 87−21992
state estimation, optimal meas. allocation taking loss of measurements into account 87−50881
state estimation for power systems, identification of bad measurement data using orthogonal transformations *(German)* 85−21093
state estimation from current meas. and bad data detection *(Korean)* 87−15201
state estimation using voltage phasor meas. 86−50836
state estimation using voltage phasor meas. 86−56371
state vector meas. and partitioned state estimator for power system monitoring 86−70737
statistical analysis of telemetered values, in power system meas. and control *(Czech)* 87−21990
storage-type impedance meter for reactance meas. during power line faults *(Russian)* 87−9227
substations, voltage-phasor meas. for static state estimation 86−18898
supply metering considerations for consumer-owned generationfacilities 86−39261
switching substations, medium voltage, solid state system for protection, automation, meas. and teletransmission 87−22666
tariff unit for remote metering *(German)* 87−4465
telecommunication power plant supervision and monitoring from remote locations 87−30283
telecontrol meas. point allocation *(Chinese)* 87−71753
telephone AC power systems, computer supervision, monitoring and control 87−30284
test system for protection equipment and testmethods using mainframe computer 85−65008
textile industry appl., conf. Greenville, SC, USA (May 1985) 86−45871
thermal power station fuel consumption monitoring, effect of meas. errors *(Russian)* 86−39541
thin film Permalloy magnetoresistive sensors, appl. in elec. meas. 85−26301
token budget metering systems in United Kingdom 86−39062
token operated prepayment meters, design and appl. options 86−39065
transducers and data-processing power placement *(Russian)* 85−43537
transducers and systems for power system monitoring, appls. and calibration 87−64213
transient fault recording for electric utilities 87−30286
transient frequency and phase, problems and meas. 86−39252
transient recorder, digital, appl. in power system current and voltage transformer transient meas. 88−5406
transmission line relay protection, dynamic meas. devices for rapid fault detection 88−61922
transmission lines, freq. and voltage meas., microprocessor-based system 87−50888
transmission lines, long, dynamic power angle meas. 86−44970
transmission lines, makeup-arc extinction monitoring device 87−9190
transportable high-voltage cable laboratory, for power transmission line testing *(Russian)* 87−3375

power system measurement continued
UIE flickermeter, lighting flicker level control 88−17226
universal multifunction meas. convertor and voltage transducer *(Russian)* 86−56507
universal scanning and control measurement system *(German)* 86−4957
voltage detectors for URD cable testing 88−5346
voltage quality determ., accuracy effects of digitisation errors *(Russian)* 86−56508
voltage transducers for New Zealand power system management, harmonic response tests 85−59826
waveform distortion effects in electrical power consumption measurement *(French)* 88−36898
waveform distortion meas. using microcomputer controlled fast Fourier transform spectrum analyser 86−45040
ZnO gapless surge arresters monitoring systems 86−6439

power system planning
8 GW/2400 km alternative DC power transmission for Brazilian Amazon Basin, planning and interconnection 86−12385
10 kV Belgrade network, optimal limits of feedback *(Croatian)* 88−48552
10 kV neutral point grounding, practical problems *(Croatian)* 86−51092
11 kV rural distribution networks in India, planning method for loss minimisation 85−15578
12 phase power transmission systems, feasibility and fault anal. for protection planning 86−6409
20 kV compact overhead line planning, development and costs *(Hungarian)* 87−64185
110 kV and 220 kV networks, seasonal and planning optimisation computer program *(Russian)* 87−15229
230 kV transmission grid design and construction, Ecuador 85−15540
380 kV network of West German joint network, planning and construction *(German)* 86−18769
400 kV networks, design, construction and project management 85−15535
400/110 kV transformer substation requirement for Zagreb city power supply reliability *(Croatian)* 86−39096
500 kV transmission lines, appl. of single phase reclosing 88−68874
625 MW coal-fired power station project completion in extensive environmental framework 86−61383
AC and DC power transmission, IEE conf., London, England (Sept 1985) 86−12500
AC power system stochastic load flow anal., HVDC links inclusion 85−43579
AC transmission network planning, computer-aided network capacity assessment 88−68842
adjoint power network for AC power system studies 86−65655
aircraft, long endurance, power system design 87−42149
Algerian 220 kV transmission network extension plan 87−21953
American Power Conference, Chicago, IL, USA (April 1985) 86−57085
annual power plant installation planning procedures and results *(German)* 86−32886
automated generation/transmission expansion planning using decomposition approach 86−18751
automatic energy management with generator scheduling and medium term planning 87−4315
availability improvement using computer simulation 88−10826
Baltimore Gas and Electric Company technology choice analysis 86−61054
base-load generating plant construction project data management for prudence inquiries 87−57593
battery storage as spinning reserve, economic benefits anal. 88−5820
Bay of Fundy tidal power resource development 88−42926
BC Hydro, power transformer capacity additions criteria 88−11278
BERELT program for asymmetric operating state calc. for power system planning and operation *(German)* 86−18635
Bewag power supply network planning perspectives *(German)* 87−64103
bird protection measure on 6-35 kV power transmission lines *(Russian)* 87−78171
BPA residential utility energy conservation programs, long term effects estimate 86−25550
Brazilian hydroelectric power system planning, computerised reliability eval. 88−68845
Brazilian national hydrothermal electrical system generation coordination 86−45232
bulk power reliability eval. at ENEL, Italy 88−68846
bulk power transmission access, technical and economic considerations 86−39051
bulk supply and distribution planning with risk analysis and outage consequence evaluation 87−78055
Burma, electricity supply system planning and improvement 88−68849
capacity expansion planning, convex programming approach 87−35594
capacity planning problem with renewable resources, integer programming approach 87−78048
Castelo de Paiva (Portugal) hydroelectric scheme general plan *(Portuguese)* 87−78537
CEGB, EDF and ENEL collaboration on planning and operation conf., London, UK (March 1988) 88−43609
cement plant distribution system operation and safety aspects 85−15595
Central Queensland railway 132/50 kV traction system supply planning 86−33763
Chinese hydroelectric power resource development 87−42702
choices facing electric power system planners in developing areas 86−39082
city network planning and operational systems using CAD 88−17130
coal gasification, EPRI conf., Palo Alto, USA (Oct. 1986) 88−23768
coal gasification-combined-cycle plant phased capacity addition data 86−39549
coal-fired generating unit equivalent forced outage rate prediction, learning curve 86−61394
coding system, location oriented, for network components *(German)* 86−50822
COGEN3 cogeneration analysis software user's guide 87−35798
cogeneration planning and economics, symposium, San Diego, CA, USA (April 1985) 86−50935

circuit breakers, automatic, for LV distribution networks protection *(Italian)* 88−62512
circuit protection, British practices an international standardisation 87−71729
Class 1E power systems and equipment protection in nuclear power stations, IEEE standard 87−21974
co-ordination on manufacturer's advice *(Italian)* 86−70718
cogeneration plant protection, relay setting procedures for failure minimisation 88−30569
cogeneration power plant design, utilisation points, protection and control 85−43868
colliery electronic protective systems 85−43654
colliery power supplies with insulated neutral point, directional protection against earth faults 85−32232
colloquium on 11 kV overhead ccts., fault rate reduction, London, England, (1985) 85−32940
combined control and protection system for improved performance of HVDC links in the presence of AC faults 85−32242
commercial power main transient design, LV protection 88−17193
communication line hazardous voltage meas. *(Croatian)* 87−15372
communications and energy conf., Montreal, Canada (Oct. 1984) 86−38
complex system failure state assessment in stressful EM environments 88−8531
components design principle, response to abrupt change of line current *(Chinese)* 88−30411
composite fibre-optic overhead ground wire, communication capabilities use, field trial 85−57923
composite power system reliability, relay protection operation and failure 88−68735
computer aided calculation of protection settings *(German)* 85−38550
computer aided IREQ synthetic test circuit for protective devices *(French)* 85−32652
computer aided protective device coordination, case study 85−21253
computer and telecommunication systems, uninterrupted power supplies 86−6415
computer appls. to power industry PICA conf., San Francisco, California, USA (1985) 86−52117
computer controlled protection test system 88−23580
computer distance relaying, theory and prototype develop. *(Chinese)* 88−36886
computer power protection selection 88−5780
computer programs for analysing and planning a selective network protection system 88−17099
computer room power requirements in the late 1980s 87−9681
computer system power protection 86−65775
computerised automatic circuit recloser control for distribution network protection 85−15684
computers, power control systems 87−72257
conf., Newcastle, Australia (Oct. 1985) 86−40387
conference, London, England (April 1985) 85−60665
consumer unit development and protective device sophistication 87−9212
consumer-utility interconnection protection, IEEE Working Group interim report and guidelines 85−4552
contact and fire protection equipment *(German)* 86−12490
control and protection for plant reliability at Water and Electricity Department of Abu Dhabi 87−21881
control of emergencies in power systems with weak ties *(Russian)* 85−32223
conversion system protection in microseconds by PYROBREAKER devices 85−38579
coupled AC and DC transmission networks, performance of semiconductor rectifier monitoring and protection *(Russian)* 85−21246
criteria indication with memory programmable techniques, power station appl. *(German)* 86−32648
critical contingencies of power systems, filtering and ranking method using sensitivity matrix 85−43525
current and voltage phasors calc. using new algorithm 87−35682
current limiting fuses for distrib. network and transformer protection appls. 88−68927
current restricting fast operating switches for grid protection against short circuits *(German)* 85−10029
current surges protection for computers *(German)* 88−48612
current transformers for industrial power system relay protection, selection criteria 86−70961
DBMS applied to CAE of transmission system protection 86−61111
DC elec. arc, temp. model *(Russian)* 86−61191
DC elec. transit system, microcomputer-protective relay for feeder short-cct. fault detection 87−30277
DC mains protection against short circuits to ground *(Russian)* 88−48610
DC power systems, multiterminal parallel connected, anal., operation, control and protection 86−12389
DC to AC converter, appl. in AC power distribution for satellites 87−71254
design package for protection design on personal computer 87−50861
detector system in gas-insulated substation bus ring for transient phenomena anal. 87−57695
device co-ordinated by interactive microcomputer graphics 86−45021
diagnostic tests optimisation, distinguishability criterion *(Russian)* 88−30408
different protection scheme stability, effect of current transformer core transients *(Russian)* 86−70717
differential busbar protection equipment, operation and microcomputer bused parameter-setting *(German)* 86−12488
differential current protection devices for LV systems *(German)* 87−50868
differential protection buses, imbalance current anal. *(Russian)* 86−32819
differential protection of Teed feeders 85−64974
differential protection of transmission lines with a charge-dependent method *(German)* 87−64156
differential protection using current transformers, spill current modelling *(Russian)* 86−39203
differential relay based on dead angle principle and current transformers, simulation test *(Chinese)* 86−39222
differential relay protection of multi-ended power system networks 86−25638
differential-phase HF protection in Dnieproenergo power complex, testing *(Russian)* 87−4422
digital adaptive protection, phasor meas. appls. 88−10909
digital computer for electrical system protection, feasibility 85−27134
digital direction comparison line protection, design and engineering 85−64976
digital directional comparison scheme for power transmission system protection 88−61983
digital distance protection, based on adaptive Kalman filtering 85−48614
digital distance protection relay using 16-bit single board computers 85−64997
digital distance relay mho elements using bit slicetechnology 86−18821
digital filters for power system fault location appls., digital simulation *(Chinese)* 86−41232
digital generator protection, developments 85−65217
digital HV transmission line protection, new algorithm for computer aided fault analysis *(German)* 85−15661
digital impedance protection of power transmission lines using a spectral observer 88−54967
digital impedance relay measurements, accurate fault location estimates 85−65010
digital line differential protection based on symmetrical components *(German)* 87−30249
digital protection technology, current status, new innovations *(German)* 85−32227
digital relay elements anal. for freq. deviation in power system 87−9218
digital relay for power system protection, installation and field experience 87−30267
digital relay protection based on mutually orthogonal functions, dynamic charact. investigation 85−38571
digital relays for overhead transmission line protection *(French)* 87−78205
digital signal processing, spectral observation of power network signals 85−25109
digital simulation, hardware and software reviews *(Chinese)* 86−38990
digital transient simulation test facility for EHV power system protection 86−51115
digitally controlled real-time, analog power system simulator for closed-loop protective relaying testing 88−55083

power system protection continued
directional relay based on positive phase sequence, operation and computer simulation *(Chinese)* 87−21969
directional relay protection of transmission lines, sensitivity anal. *(Russian)* 85−48611
directional relay system for power network protection *(Polish)* 86−18871
dispersed storage and generation power systems, operation and design 86−12237
distance feeder digital protection using 16-bit microprocessor *(German)* 88−36877
distance protection relay employing digital ccts. with CMOS logic, high speed, appl. 85−32238
distance protection relays, reliability evaluation 85−15674
distance protection scheme for short transmission lines using microprocessor-based system 88−55066
distance protection signalling, FSK discriminator design and discrete-tone interference prevention *(Chinese)* 86−65774
distance protection study using PI transmission line model 88−69060
distance relay design for transmission and distribution lines 85−64998
distance relay protection during main current transformer saturation, BBC LZ95 system 85−32215
distance relay zone settings, computer determ. using short circuit calcs. 86−51114
distance relaying by digital computer 88−61976
distance relaying for power system protection, microprocessor-based 88−48609
distributed microprocessor application to transmission anddistribution automation systems 85−65404
distribution feeders, status of high-impedance fault detection 85−43590
distribution line broken-wire detection equipment develop. *(Japanese)* 87−57706
distribution line overcurrent protection practices industrial survey results 88−75161
distribution lines, lightning faults prevention, current limiting arcing horn develop. 88−55085
distribution network appls., conf., Liege, Belgium (May 1987) 88−11591
distribution network computerised fault location 87−42531
distribution network incorporating photovoltaic systems, testing and fault protection 87−9441
distribution network MV substations, microprocessor-based integrated protection and control *(German)* 85−48574
distribution network practices in large cities, Stuttgart, West Berlin, Tokyo *(Spanish)* 86−50986
distribution network protection against earth short-circuits, device operation and selectivity *(Russian)* 85−43653
distribution networks, earthing and fault-current switching *(German)* 88−36834
distribution networks, isolated group intertrip relay for digital protection/communication package 87−42541
distribution networks, medium voltage, distributed compensation of earth fault currents 85−59685
distribution networks, microprocessor based integrated protection, metering and control 87−42458
distribution networks, neutral voltage rise during multiple earth faults, computer-aided anal. *(French)* 85−32157
distribution networks, protection systems optimisation and simulation, computer aided approach *(French)* 87−78080
distribution networks in rural areas, power supply reliability *(Russian)* 87−4367
distribution networks protection using fused ring main units and HV fuses 87−57697
distribution networks with interconnected dispersed storage and generation devices, protection 85−59684
distribution substations, integrated digital systems for control and protection *(Slovenian)* 86−39121
distribution system, protection device selection using PROLOG expert system 88−23473
distribution system protection coordination, computer-aided approach, algorithm 87−78107
distribution system protection using HV current limiting fuses 86−45030
distribution system reliability eval. respecting control and protection system 88−42847
distribution systems, digital techniques for discriminating protection *(Dutch)* 85−27092
distribution systems and protective devices 85−53305
distribution transformers as resistance ground sources for power system protection, design 85−43647
disturbance conditioning and monitoring 86−32821
dynamic overvoltage protection using static shunt compensation 85−27102
dynamics, small noise rel. to security assessment 86−6278
earth fault comparison admittance protection, role of compounding member *(Polish)* 85−38563
earth fault location algorithm including line capacitance 87−30245
earth fault protection in networks with compensated neutrals *(Russian)* 87−50858
earth fault protection of transmission lines, harmonics effects *(Russian)* 86−39206
earth short-circuit in network with arc-suppressing reactor, transients *(Russian)* 86−6413
earth-fault protection requirements for 6-35 kV networks *(Russian)* 86−25639
earth-leakage current operated power cut-off circuits, testing *(German)* 87−21966
earth-leakage detector systems for hazardous situations in industry 87−30259
earth-leakage monitor, Siemens 7VC 1626-4AA, for medically used room 87−15387
earthing behaviour under lightning impulse currents, Lapin 3.5 program appl. *(French)* 87−78184
earthing counterpoise surge response, computer aided investigation 88−23563
earthing system, sensitivity anal. of accident probability 85−59806
EDF EHV substations, control and protection, digital techniques appl. 87−58174
EHV and HV networks, guided rod earthing and short circuit unit *(German)* 86−56487
EHV circuit breakers, closing resistors elimination by pole or polarity closing 88−49080
EHV DC overhead lines, lightning protection and insulation coord. *(Chinese)* 85−4666

power system protection continued
eHV line-connnected shunt reactor protectionapplication and experience 86−51112
EHV power system high speed digital protection, time delay compensation 87−30264
EHV power system protection using ultra-high speed distance relays 88−69058
EHV power systems, interactive computation system for relay setting and relay operation simulation 86−32823
EHV series capacitor reinsertion, SiC varistors compared with ZnO varistors 87−4457
EHV system, 400 kV, protection 86−65749
EHV system, solid state I2 rate of change relay, digital simulation 88−69067
EHV system protection, EHV system transient studies and test facility *(French)* 86−6397
EHV transmission lines, adaptive digital distance protection 88−69068
EHV transmission lines, higher protection scheme reliability with currentcompensated undervoltage relay 85−64970
EHV transmission lines, recursive algorithm for distance protection 88−75172
electric energy systems, control, computer appls., conf., Brisbane, Australia (Oct. 1986) 87−36336
electric power networks, harmonic contents meas., protective systems operation *(German)* 88−23443
electric power systems research opportunities 88−42805
electrical and electronic equipment, effects of disturbances *(French)* 85−38542
electrical earthing using reinforced concretefoundations 85−64988
electrical fault assessment method for power system protection *(Slovak)* 85−15659
electrical fault indicators for power system appls., selection guidelines 88−61962
electrical installation operation using standby generator distrib. system protection, safety 87−57631
electrical mining machines, safety grounding 86−32841
electrical protection for domestic and small commercialinstallations 85−64903
electrical protection for domestic and small commercial installations 87−21985
electrical substations, cathodically protected grounding system 85−44083
electricity installations, monitoring, control and protection by computer *(Dutch)* 87−77967
electronic fuse for medium voltage systems and equipment protection 86−12964
electronic system interference effects of power network and installation impulse characts. 86−56479
electronics in mining, conf., Randburg, S Africa (Sept. 1984) 85−39434
emergency control practices 86−6240
emergency operation, immediate load control approach to system safeguarding 88−5274
emergency operation after calamitous disturbance using distributed intelligence 88−5273
emergency/standby power system with multiple neutral-to-ground connections, ground-fault protection scheme 87−42529
emission controlled fault current limiter development 85−59823
EMP impact assessment programme 88−8529
EMP impact on electric power system insulation 85−24875
EMTP software, LV protective devices computer modelling 88−17039
energy management system for network feeder and capacitor control and circuit breaker monitoring 86−50913
energy management system intelligent alarm processor 86−51117
Eta-Beta II, poloidal and toroidal crowbar systems 85−4694
evaluation by equipment with built-in automatic testing and self-checking *(French, English)* 87−57685
expert systems for power system trouble anal. 86−51118
failure detection IC, transient protection during AC/DC power deviations 88−30417
fast fronted current flow, effects on earth electrode response *(French)* 88−61975
fault anal., generalised method 85−59802
fault analysis using modal transformation 87−30257
fault current limiter, microprocessor controlled 87−35698
fault current protection using supervisory system *(German)* 88−55059
fault detection on protection systems 86−51107
fault impedance calculation algorithms for transmissionline distance protection 86−39202
fault section estimation using expert system 87−30266
fault-clearing data of the Hungarian HV network *(Hungarian)* 86−50946
fault-current-limiter, shunt microprocessor controlled fault-current-limiter 87−30279
fault-recording devices producing oscillogram for production engineers 88−17075
feeder protection and monitoring system, microcomputer based, design, field testing 88−23573
feeder wire disconnection problems on Musashino railway line, Japan *(Japanese)* 87−57658
fibre optics appl. to power system protection and control 86−37901
fibre-optic pilot-wire protection, develop. for short transmission line *(Chinese)* 88−36885
figure of merit concept applied to power system protection coordination 87−30253
filter capacitor failure detector 85−64985
FIR digital filters for power system relaying 88−36890
fossil fueled steam power plant, generator protection scheme upgrades, reliability-availability-maintainability maintenance 88−11098
French EHV substations, digital techniques for protection 85−65398
frequency dependent automatic load restoration system of Irish Electricity Supply Board 86−50883
frequency synchronisation monitors with memories for power system protection 85−4679
fundamental frequency extraction for computer relaying 88−61961
fuseless industrial LV distrib. system, config., protection and safety aspects *(German)* 85−48573
fuses and/or circuit breakers, implementation problems 85−16132
gas-insulated substations, surge arrester lightning performance, computer calc., dynamic model 85−9551
general-purpose leakage-current protection device *(Russian)* 86−32854
generating plants and substations, IEEE device function number standards 86−51105

power system protection continued
generating unit with gas- and oil-fired boiler, process protection unit introduction 85−60029
generator protection design policies−Electricity SupplyCommission of the Republic of South Africa 85−64984
ground fault current distrib. using double-sided elimination method 86−51100
grounded and ungrounded systems comparison 85−15574
grounding, theoretical basis *(Spanish)* 87−35684
grounding electrodes for power systems, resistance and potential distrib. 88−23551
grounding switches for induced current interruption for grounded transmission lines 86−51836
grounding systems, freq. dependent characts., FEA 88−23575
GTO invertor protection using lossless snubber *(German)* 87−64207
harmonic and noise reduction devices, measured features 86−29490
harmonic filter application in polluted electrical networks *(Dutch)* 86−12503
HDVC transmission systems, substation protection from lightning overvoltages, digital simulation 88−69057
heavy current systems, earth fault problems *(Swedish)* 87−57687
HEMP response effects models on distributed power system 88−8528
high speed differential protection of Teed circuitsusing wideband communication techniques 85−64972
High technology in power industry conf. Montana, USA (Aug. 1986) 87−65078
history 85−9538
home computer supply, power-line protection 85−21245
Hungarian research and development in electrical energy field *(Hungarian)* 85−33074
HV current meas. system development *(Croatian)* 88−61995
HV current transformers for transient state protection *(French)* 88−55419
HV distrib. system switchboard with relays and circuit breakers, automated instrumentation *(Japanese)* 87−78084
HV distribution substations, SYSTOR meas., protection and control system *(Czech)* 86−33487
HV feeder and substation protection, microprocessor-based package 86−56485
HV fuses for HV distrib. system protection, 'M' effect and thermal considerations 87−42536
HV fuses versatility in protection of distribution systems 85−65396
HV ground electrodes, current field calc. using boundary-elements method 88−69069
HV installations earthing system, proximity effect between earthing grid and external electrodes 87−4443
HV interconnected networks, telemetering, telecontrol and communication systems 85−15505
HV line differential protection and distance protection *(Dutch)* 88−48571
HV line directional line protection, fault initiation *(Dutch)* 88−42850
HV network, power station and generator protection policy harmonisation 85−4672
HV overhead lines and towers, cascade failure prevention 85−15655
HV plant, local isolation 86−65769
HV power line, microcomputer connection by optical fibre link, voltage and current meas. 87−78145
HV power line protection against short-circuit currents, starters elliptical characts. calc. *(Czech)* 86−25653
HV power networks fault analysis *(Czech)* 86−18869
HV power system, Austria, multiple dependent outages investigation *(German)* 87−21967
HV power systems, conf., Paris, France (Aug.-Sept. 1984) 86−45914
HV power transmission protection using line carrier telecomm. methods 88−69059
HV power transmission systems, conf., Beijing, China (Oct. 1987) 88−62880
HV stations, integrated protection and control 85−65400
HV testing of power system protection components *(Russian)* 85−15678
HV transmission line fault location algorithms distance protection aspects 87−4381
HV transmission line protection, Brown Boveri LR91 ultra high speed directional relay, features 85−27547
HV transmission line trap insulation testing for power line carrier reliability improvement 88−23562
HV transmission lines, protective relaying and line automation 87−9185
HV transmission lines fault anal. using spacephasors 87−78194
HV two-stage switches with air-filled isolating separator, expt. study *(Russian)* 86−26195
HV/MV substations, protection and control 88−24111
HVAC systems metal-oxide surge arresters, long duration current impulse withstand test 87−30268
HVDC and AC interconnected power system, operation and fault characts. 85−15503
HVDC bulk power transmission, control and protection system development 86−39109
HVDC convertor disturbances, computer aided diagnosis 86−12501
HVDC ground electrodes, resistivity meas. and computerised current density calc. 88−69070
HVDC power transmission, overview 85−48571
HVDC submarine-cable fault-detection system 86−65781
HVDC transmission, neutral line protection system 86−65678
IEE regulations for electrical installations, short-circuit currents protection 85−64987
industrial and commercial elec. systems, transients and harmonics 87−42528
industrial and commercial power systems, protection and coordination, IEEE recommended practice 87−21975
industrial cogeneration and transmission application of protective relays 86−39220
industrial distribution networks, theoretical prerequisites for fault-throwing earth leakage protection *(Russian)* 86−56421
industrial distribution systems, limitations of ground fault protection schemes 85−27109
industrial electric supply networks, relay protection reliability characts. *(German)* 88−5398
industrial plant power conditioning 87−9682
industrial plant power engineering technical guidelines 85−4594
industrial power engineering conf., London, England (Dec. 1986) 87−16285
industrial power system protection coordination CAD, transient phenomena 88−10919
insulated neutral systems, earth fault protection 86−61179

power system protection continued
insulation co-ordination, principles and procedures to cover all voltage stress situations 87−42401
insulator flashover due to bird droppings, protective device *(Russian)* 86−44997
insulator selection and ground classification for power system protection *(Polish)* 85−21248
interconnected power system, tree and six phase, fault anal. *(Italian)* 86−70582
interconnected power system in Brazil, national scheme for controlling emergencies 86−50882
interconnected power systems, economic characts. of protection with automatic control *(Russian)* 85−48609
international standardization in the field of electricalrelays 85−64967
introduction to system protection 85−27098
isolator, compact type motor operating mechanism *(Japanese)* 86−70706
isolators, present and future trends *(Japanese)* 86−70703
Israel Electric Corp. 400 kV network, switching surges 86−32840
Itaipu HVDC invertor substation, disconnection from AC transmission system 86−12915
JT-60 poloidal field coils, thyristor convertors, control and protection 85−5212

LV installations, earth leakage protection, high rupturing capacity fuse links *(Spanish)* 88−5402
LV installations, protection against electrical accidents *(Spanish)* 88−36878
LV networks overvoltage protection, discharge and suppression devices construction, appl. and limitations *(Italian)* 87−15385
LV networks protection by fuses, limits on maximum length of mains system *(Italian)* 85−53353
LV protection equipment, appl. design guide 87−71752
LV system minimum short-circuit current, rapid calc. method *(German)* 87−50849
M5010 digital display test unit, for testing electrical protective measures 86−24278
magnetic circuit protector branch distribution panel 87−9223
mains power perturbations, classification and solns. *(Spanish)* 86−61176
medium voltage cubicles, protected, construction *(French)* 86−56491
medium voltage distribution networks in industrial plants, earthed protection devices 87−4449
medium voltage industrial and cogeneration distrib. systems, ground fault protection 87−42530
medium voltage networks, earth fault protection using line zero admittance comparison *(German)* 86−65760
medium voltage system and equipment protection, new fault-interrupting electronic device 85−27131
medium-voltage network protection by time delay type overcurrent relays 86−50990
metal oxide arresters for protecting power utility networks from excessive voltage, digital computer simulation *(German)* 88−23566
metal oxide surge arresters, switching surge duty in multiphase system 88−23576
MEXICO and ANASEC models for load shedding in EHV transmission 86−12368
MFTF-B, neutral beam power supplies, sparking protection 85−4695
microcomputer based automatic antifault units for ensuring reliability 85−4678
microcomputer based automatic load switching unit, development *(Russian)* 86−25648

power system protection continued
microcomputer based protection and monitoring of power system feeders 85−48613
microcomputer-based equipment for automatic control of substations 85−65397
microcomputer-based protection for oil and gas platforms, future development 85−64979
microcomputer-based relay for protection of three-terminal lines 85−9552
microprocessor based fault current limiter 87−35695
microprocessor based fault locator for electrical power systems 85−15689
microprocessor based metering and protection devices, waveform sampling methods 88−30419
microprocessor based overcurrent and directional relays for distribution line and machine protection 87−57705
microprocessor based power system relays, computer aided develop. tools, A/D converter modelling 88−30421
microprocessor based protection and control equipment fordistribution systems 85−65000
microprocessor based underfrequency relaying 85−64966
microprocessor instrumentation in electrical power system distribution, protection relays 85−32248
microprocessor-based algorithm for high resistance earth fault distance protection 85−32230
microprocessor-based combined system protection against under- and overvoltage, single phase and reversed phasing 87−57689
microprocessor-based HV-feeder protection package 85−65402
microprocessor-based power system protection schemes 87−21980
microprocessor-based power system relay protection, complementary approach to DC offset compensation *(Chinese)* 87−71741
microprocessor-based protection and instrumentation for interconnected low voltage substation 85−65403
microprocessor-based protection and recloser control relay 85−64982
microprocessor-based XS92a test set for comprehensive testing of line protection equipment in field 85−65009
mine track/trolley haulage system impedance models 86−45890
mining equipment sectioned networks, control equipment operational charact. *(Russian)* 85−9489
mining facility power system, high-resistance and selective ground fault protection system 85−10304
mining industry in Hungary, safety requirements of power supplies and power apparatus *(Hungarian)* 86−71166
Mitsubishi Electric traction substation power supply systems and equipment 86−56994
modular phase comparison protection with PLC or fiber opticlink 85−64971
Morinomiya Electric Car Depot, distrib. tower power fuse holding insulator failure *(Japanese)* 87−51388
moulded case cct. breakers, solid-state, for selective coordination 85−21746
MOV-protected series capacitors for transmission networks 88−23425
multi-microprocessor-based travelling wave relay 85−64999
multi-terminal pilot-wire differential relay 85−64975
multicircuit transmission lines, lightning flashover performance calc., MULTI-FLASH computer program 85−4682
multicircuit transmission lines, lightning flashover performance calc., MULTI-FLASH computer program 85−4683
multiphase impedance relays, adaptive props., polar charact. *(Russian)* 88−48614
multiple coil/circuit magnet systems, short ccts. effects evaluation 88−65092
multiprocessor UHV line relay testing with transientnetwork analyzer 86−65782
multitasking digital relay algorithm for protecting and monitoring distribution feeders 85−27133
multiterminal DC links, control and protection principles 88−68905
MV, fuse coordination and selection, computer aided anal. *(Spanish)* 87−4447
MV and LV power systems, computerised relay protection selectivity testing 86−25628
MV networks, remote protection equipment using microcomputer *(German)* 87−57699
MV networks, short-circuit protection with uniform neutral point management *(Hungarian)* 88−23466
MV overhead distrib. system protection and sectionalization 88−23525
MV substations microprocessor-based integrated protection and control 85−59683
MV system, microcomputer based distance protection 88−17206
negative-sequence power-direction relay for HV overhead transmission lines 87−9206
network digital protection by microprocessor *(Hungarian)* 87−64201
network disturbances from elec. machines *(Italian)* 86−10118
network protection for emergency control in Norwegian power system 86−51109
network surge voltages, causes and reduction by using metal oxide arresters *(Hungarian)* 87−50871
networks, power transients protection 88−5384
networks incorporating synchronous machines, elect. energy quality improvement *(Russian)* 87−43670
neutral and earth conductor arrangements, residual current protective scheme *(German)* 87−21972
neutral beam generators, fault detection and protection system 85−4198
neutral earthing for industrial power supply system protection *(German)* 86−39216
no-break power system inverter for critical loads 87−71728
noise testing equipment and noise withstand capability tests for protective relays 86−51137
nonequipotential grid earth electrode systems energised by DC 87−57707
nonlinear resistor surge dividers for medium-voltage networks, 10 kA rated pulse current *(German)* 85−32239
nonlinear voltage limiters and surge diverters, testing to IEC requirements *(Russian)* 87−30270
nonrecursive digital filters with minimum freq. charact. error., relay protection appl. 87−9205
North Wales supergrid special protection schemes 85−4671
NYSEG training manual revision for power system protection and control 88−75035
operating condition assessment using multi-class pattern recognition techniques 88−23304
operational control of relays for power systemprotection *(Russian)* 86−39207
operational improvement techniques and tools 87−4226
optical fibre techniques for meas. 86−39247

power system protection continued
optimal control of automatic load-relief equipment for power system protection 85−43520
optoelectronic circuit breakers for power system protection *(German)* 88−48613
outage record system for MVEC 86−32685
overcurrent protection control using PC-based expert system 88−75104
overcurrent-time protection, computer aided coordination 85−59812
overhead distribution systems, monitoring and protection systems 85−64983
overhead electrical cables, theoretical and exptl. studies of ice deposition *(French)* 85−64947
overhead line automatic asynchronous mode canceller *(Russian)* 86−65777
overhead line protection by pole-mounted autoreclosers and sectionalisers 86−56451
overhead line protection devices, survey 85−38582
overhead line protection requirements 85−38552
overhead lines, 110-750 kV, high freq. directional protective devices 87−9186
overhead lines, statistical model of ice accretion on wires 86−6386
overhead power distribution lines, provisions for improved storm damage protection *(French)* 88−10880
overhead power line fault flow indicator, design and appl. 85−64960
overhead power supplies, failure due to electrocution of birds, engineering solutions 85−15656
overhead power transmission line protection scheme, earth fault relay system 88−61946
overhead transmission line networks, radial, protective devices 87−30221
overvoltage protection of HV and VHV lines, Japanese varistors props. assessment *(Czech)* 85−27116
overvoltages, protection against indirect lightning effects *(French)* 85−48616
overvoltages due to converter station blocking, digital computer studies, protective measures 88−23561
Paks nuclear power plant electrical installation and national grid connection *(Hungarian)* 86−18929
panel main protection, branch circuit panelboards design and layout 86−18789
paper mills, elec. fault levels 85−5591
parallel transmission lines, microprocessor based distance relay, transient network analyser tested 88−48616
PEPERE: a simulation program of power system transients used to establish correct operation of network and machine protections 87−9118
phase detection method in effectively earthed network 88−10905
phase shifter distribution factors and lineload alleviation 85−59607
phase-comparison and distance protection performanceduring simultaneous double faults 85−64968
photovoltaic 2 kW residential power system interconnection with utility grid 87−64485
photovoltaic electrical subsystem design practice, recommendations 88−37107
photovoltaic power system and utility distribution network interconnection, stability, interaction and faults 85−53621
pilot differential protection of transmission lines, microcomputer based approach 88−5382
pilot relaying systems for power network protection 85−38573
planning and operation fns. research for large-scale systems 88−61792
pole slipping relay protection at Dinorwig power station, impedance meas. problems 86−25636
poloidal field coil power supply for JT-60, test 85−53767
portable instruments for electrical installations, colloquium, London, England (Oct 1986) 87−10050
Portuguese power transmission network protection systems *(Portuguese)* 87−9142
power cable fault detect. system *(Japanese)* 85−48637
power protection for telecommunication systems, overview 88−55482
power station auxiliary power supply system, CAD package for protection coordination 87−21882
power station substations and lines, short-circuit currents *(Polish)* 87−4442
power substations, earthing grid anal. 86−6872
power system computer control during faults for adaptive selective protection 87−57548
power system fault section estimating method, protective relaying system 88−68717
power system relay automatic devices, real-time freq. meas. *(Chinese)* 88−48461
power system reliability improvement, computer aided outage anal. system 86−70597
Power Systems Protection Committee−someperspectives 85−49296
power transformer substations, earthing methods *(German)* 85−60237
power transmission line outage prediction, methodology and validation 85−59720
probabilistic steady-state and dynamic security assessment using DE 88−54848
programable test unit for line and feeder protection 85−31298
programmed earth-fault protection for substation busbars, adaptable algorithms *(Russian)* 88−48607
programmed protective apparatus realisation using microprocessor computer systems 87−9216
protected arching horns for 110 kV transmission lines *(Croatian)* 87−64183
protection, fault location and classification, adaptive Kalman filtering using microprocessors 88−10908
protection from power line disturbances for computers and communications devices 85−38469
protective relay performance evaluation by computer 85−9550
protective relay performance evaluation equipment using computer simulations 86−39234
protective relay using audio tones over telephone channels, IEEE guide 88−36882
pulp and paper mill power distrib. systems, relay protection 88−76061
pulp/paper industry, conf., Houston, TX, USA, 1985 86−7345
pulse generator for EMP-induced surges simulation in power overhead lines 87−22631
pumped-storage power stations, accelerating power level detector performance and system tests 86−45249
PVC insulated distrib. cable, electric protection system for tracking troubles 87−42482
R-Rdot out-of-step relay, experience 86−51139
radial distribution networks, reliability model of zonal protection schemes 88−68932

power system protection continued
railway power supply protection and automatic devices *(Hungarian)* 87−72497
railway substations and distribution stations, digital relay protection and sequence controllers *(Japanese)* 87−78196
RAZOA distance relay, description, use, operation *(Chinese)* 88−61974
reactive power convertors for network fault-limitation automatic control systems *(Russian)* 87−9645
reactive power deficits during system disturbances 86−6405
receivers in remote control appls. resonant cct. protection *(Czech)* 87−50851
recloser maintenance to improve distrib. line reliability 87−42538
reclosers for power system protection, selection and coordination program *(Spanish)* 87−15380
recorders for fault analysis and management in supply systems *(German)* 87−41548
recursive functional expansion technique for computer-based impedance and differential protection 88−10903
relay, accurate test equipment for enhancing system reliability 85−4681
relay break point deter. using digital techniques 88−75215
relay circuit co-ordination curve development by personal computer 87−71731
relay operation coordination by computer program 87−64200
relay protection 85−64964
relay protection, automated diagnostic system *(Russian)* 88−42893
relay protection, automatic selective equipment for nonsynchronous operation prevention, reliability improvement *(Russian)* 87−4434
relay protection, bibliography, 1982-3 85−48615
relay protection and power pool automation, time programming relay design for μP systems *(Russian)* 87−64197
relay protection and protective systems, characts. and performance eval. 86−51110
relay protection automation equipment, analog data entry system 87−9220
relay protection devices, test devices, test sequences, current-time features *(Italian)* 88−61979
relay protection equipment, remote system, computer aided optimum triggering characts. and sensitivity *(Russian)* 87−4435
relay protection for fault detection *(Japanese)* 87−4450
relay protection of utility-consumer interconnection, IEEE standard 86−56494
relay protection schemes, tutorial 87−50860
relay protection systems, fault location, abnormal operating conditions detection, digital simulation models *(Russian)* 88−30415
relay protection testing using μC-based equipment *(Russian)* 88−69048
relay protection using microcomputer-based network meas. algorithms 88−69046
relay seismic testing, IEEE standard 88−36895
relaying and automatic devices, state-of-the-art for development 87−9215
relaying and fault location determ., numerical soln. 85−32228
relaying performance improvement, using computer aided calc. and program 85−21268
relays, bibliography, 1984-85 87−50872
relays, digital, computer simulation 87−24527
relays, seismic testing, IEEE standard 86−56496
relays, seismic testing, IEEE standard 86−56497
release behaviour during nonideal input signals *(German)* 88−23565
reliability eval. of protective relay systems with built-in automatic testing and supervision 86−51108
reliability increase in computer controlled plants *(Czech)* 85−59975
reliability modeling of protective systems 85−4675
remotely controlled relay protection, diagnostic test program *(Russian)* 87−4436
renewal of protection on an existing power system 85−64962
residential distribution networks influence of harmonics on relay protection 88−75162
residual current devices, buyer's guide 87−72313
resistance/reactance circuits and parameter relationships to asymmetry, comment 87−15374
resistance/reactance circuits of power system protection, X/R, I_P and I_{rms}' relationships 85−43648
resonance curve determ. of network district using conductor to earth voltages *(German)* 86−56455
resonance earthing of neutral conductor, safety conditions of 6 to 10 kV mining networks *(Russian)* 87−21970
RFX power supply, protection and switching system 87−72276
ring disconnecting unit with full range fuses, system protection concept 88−24102
rotary power conversion, use in power protection 87−9680
rural distribution networks, microcomputer aided control and protection *(Russian)* 86−61131
rural power system disturbances in Alaska, electric power quality improvement 85−43543
safety precautions against electric shocks and earth faults 88−61969
same-tower double cct. power transmission lines, microcomputer based distance protection *(Chinese)* 88−61944
SAX system, medium-voltage distribution mode 88−23532
SCADA system and relay protection for power system 88−5284
Seattle Metro trolley coach expansion project, power system for lines 15 and 18 *(French)* 87−79078
security, supervisory control and protection concept 85−26930
self-adaptive and predictive system for operationalintertripping 85−64981
semiconductor relay protection, diagnostic equipment design *(Russian)* 88−30409
series capacitor compensated transmission lines, high speed directional comparison protection relay 88−23572
series resonant based invertors for aerospace applications, generalized control and protection 85−49027
short circuits, numerical computation for automatic protection *(Polish)* 86−39212
short circuits and overloading in LV electrical installations, selectivity of protection devices *(German)* 85−15682
short line fault transient recovery voltage calc., line trap effects 86−32829
shortcircuit failure prevention of electrified railway line substation (Japan) *(Japanese)* 87−5006
shunt-reactor protection cabinet type Sh2104 87−9623
signal recognition in power system relays, block pulse function appl. 88−30410
signal transceiver for automatic power system relay protection *(Russian)* 86−65753
simulator, real-time, for protection equipment testing, microcomputer for control and data acquisition 87−30258
single-phase current protection in network with floating neutral *(Russian)* 88−61965
single-pole reclosing schemes, performance assessment technique 85−27099
small disturbance instabilities, probabilistic mechanism 85−38561
small hydroelectric asynchronous generator sets and electromechanical equipment *(German)* 86−6595
solid state residual current operated earth leakage devices, a cure for nuisance tripping 85−21259
solid-state rack-mounted current-differential relay system 87−15388
stabilisation by SMES four-quadrant active and reactive power control 87−71735
state estimation, polar and cartesian coordinate algorithms, comparative study 85−43547
state estimation using voltage phasor meas. 86−50836
state estimation using voltage phasor meas. 86−56371
static DC traction power feeding system employing thyristorised cct. breakers 85−5445
static distance relay equipment, RYL1S, built-in testing and monitoring 85−38578
static VAr compensators, load rejection duty, series capacitor overvoltage protection 86−45024
step-out prediction and detection, test equipment development *(Japanese)* 86−32832
stored energy vacuum switchgear for distribution network protection automation 85−16160
substation cable outlets performance monitoring by 'oscilloperturbograph', auxiliary current transformer selection *(Czech)* 88−16236
substation protection, LP and L company DC power control system review 85−9534
substation protection control schemes using microcomputer technology 88−54924
substation series C EM stabilizers secondary circuits *(Russian)* 87−30246
substation tapping circuits, back-up protection *(Russian)* 86−45471
substations protection, by relays needing no external power and associated wiring 85−59816
superconducting limiters of short-circuit currents *(Czech)* 87−9214
supply line disturbances 86−65748
supply network voltage quality protection against large heaters and induction motors *(French)* 87−21903
supply systems at fault, selection of cct. breakers and fuses 85−32221
surge arresters, IEEE standard 86−51148
surge arresters for HV power network protection *(Polish)* 85−38576
surge protection of distribution systems, critical issues 86−65771
switchable metal-oxide surge arresters, qualification tests 87−30269
switchgear plant control technique with secondary task decentralisation *(German)* 87−4840
switching overvoltage statistical analysis by hybrid simulator 86−12499
synchronous clocks for power system fault location, control and protection 86−32872
synchronous machine model and system fault transient waveforms 87−15700
teed circuit protection, principles of travelling wave techniques 86−32824
teed circuit protection, travelling wave techniques for multiphase/multicircuit systems 86−32825
telecommunication cables, power protection 85−38564
telecommunication power system protection techniques 86−61185
temporary earthing, surrounding protection zone calc. *(Croatian)* 87−78189
test system for protection equipment and testmethods using mainframe computer 85−65008
testing of protection systems using digital anal. 86−51111
TFB 420/80 420 kV single-column pantograph isolators for short-circuit current peaks up to 200 kA 87−78169
TFTR, ion source protection equipment 85−4693
TFTR AC power system 85−5216
thermal power plant automatic control limitations and optimisation *(Croatian)* 87−42638
three phase distribution networks, physical equivalent circuit model for arcing fault studies *(Russian)* 85−15585
thundercloud-warning radar system for power system service safeguard 86−12498
time-graded protection principles for MV and LV power networks *(Italian)* 85−59814
Tohoku Shinkansen express railway, power transformation facilities and control *(Japanese)* 86−7240
tracking trouble, system for detection in multiple distribution lines *(Japanese)* 85−9545
transformer neutral line earthing regime *(Russian)* 85−4676
transformer substations, development requirements for control, protection and automation techniques *(German)* 88−17792
transformer substations using circuit breakers, protection units and current limiting units *(Dutch)* 88−49022
transformer-type current-limiting breakers with controlledsuperconducting screens 86−39208
transient controlling actions, automatic antifailure equipment *(Russian)* 87−30247
transient stability, effect of power load unbalance relay operation 87−42540
transient stability analysis, structure preserving energy function 86−6236
transients, travelling-wave method of calc. *(Croatian)* 85−38546
transistorised starting element for blocking operation of protection on power swings *(Russian)* 86−39138
transition processes, solution using complex code *(Czech)* 87−57682
transmission class substations, implementation of integrated protection and control system 85−65401
transmission line, transient response, protective device loading 86−32761
transmission line and substation insulation failure, sensitivity anal. of lightning effects 85−53355
transmission line distance protection by spectral estimation using rectangular wave transforms 86−45010
transmission line distance protection using the new QUADRAMHO method 87−4339
transmission line distance protection using zero-sequence reactance relay with microprocessor 88−10918
transmission line fault location estimation from digital impedance relay meas. 88−55064
transmission line high speed current differential protection scheme, develop. 86−39145

power system protection continued
transmission line Laplace modelling of lightning return stroke *(French)* 87−78185
transmission line parameters, distance protection with hybrid calc. *(German)* 86−6321
transmission line protection, digital protective relaying through recursive least-squares identification 88−75173
transmission line protection, high speed, transient network analyzer study 86−51113
transmission line protection, modified DE *(Chinese)* 87−50847
transmission line protection against single-phase short circuits *(Russian)* 86−12432
transmission line protection by independent phase selection and simplified autoreclosure *(Chinese)* 87−4431
transmission line protection relays, buyer's guide 88−36892
transmission line protection using digital impedance methods, evaluation criteria 85−32161
transmission line protection using travelling wave technique 88−23480
transmission line relay protection, dynamic meas. devices for rapid fault detection 88−61922
transmission line twin-conductor ground return equiv. ccts. *(Russian)* 86−51083
transmission lines, computer-based relay protection algorithms 88−68934
transmission lines, current protection devices 87−9188
transmission lines, flashover probability, relation to protection, graphical methods 88−75222
transmission lines, lateral protection from short circuits to earth *(Russian)* 87−15265
transmission lines, lightning data anal. for improved line protection design 88−23560
transmission lines, makeup-arc extinction monitoring device 87−9190
transmission lines, remote protection equipment 87−9187
transmission lines, series compensated, fault transient anal. and digital simulation 86−44971
transmission lines 600-750 kV, single-phase and three-phase automatic reclosure device 87−9189
transmission link overloads during emergencies, rate allocation control, simulation testing 85−15664
transmission network, overvoltages due to single phase and two phase earth faults *(French)* 85−9531
transmission network and power station protection, harmonisation of policies 86−51116
transmission network integrity and generating unit stress compromise *(Chinese)* 87−50736
transmission network protection schemes performance 86−56486
transmission networks, protection against short-circuits to earth *(Russian)* 86−32813
transmission networks integrity, compromise with stresses on large generating units *(Chinese)* 87−50735
transmission substation, design of program for evaluation of digital protection and control system 85−65399
travelling current source and transmission line model comparison in lightning EMP calc. *(German)* 86−56469
travelling wave relay, multi-microprocessor based, for transmission line protection 86−39242
tripping angles, determ. of critical and maximum parameters *(Russian)* 86−56457
Trisil, voltage limitation and energy absorption circuits *(German)* 86−52975
turbine-driven synchronous generator control, in VHV power network *(Slovak)* 86−25504
turbogenerators, mech. stresses, voltage and power fluctuation effects *(French)* 86−6754
UHV power supply systems, capacitor banks switching, overvoltage protection, measures and math. model *(Russian)* 85−4674
UHV SF_6 insulated installations and transmission lines, insulation coordination using metal oxide surge arresters 86−51106
UHV transmission lines, digital filter design for fault location *(Chinese)* 87−50862
UHV transmission lines, untransposed double circuit, high-speed reclosing using asymmetrical four legged reactor 86−51727
ultra high speed distance protection based on travellingwaves 85−64978
ultra high speed protection of transmission lines 87−4338
ultra high-speed directional relaying for line protection 85−64977
ultra-high speed directional comparison protection, distance and directional relays, develop. *(Chinese)* 88−36884
undergraduate power system protection course 88−49415
underground distribution cables, nationwide survey in United States, construction and installation practices 85−27050
uninterrupted electric power distrib. by ground failure location and control *(Japanese)* 88−61915
uninterruptible power supplies for computers 85−21695
UPS appl. 85−38565
UPS selection considerations 86−70722
urban distribution networks in Brazil, Peru and Argentina *(Spanish)* 87−21917
urban distribution system protection 87−4362
URD surge protection using metal oxide arresters 88−23453
US east coast lightning detection network, magnetic direction finding network 87−71738
USA Atlantic coast lightning detection and protection network 87−50855
utility cogeneration protection, fault detection and islanding 88−43034
utility/small power producer interconnection, protection scheme selection, decision anal. 86−65765
vacuum interrupters, single axial magnetic field electrode anal. *(Chinese)* 87−21986
vacuum power fuse with axial magnetic field for general purpose protection 86−6940
VHF differential-phase for 220 kV transmission line *(Chinese)* 87−4430
Voitsberg 3 steam power.station 110 kV network short-circuit test *(German)* 85−48874
Voitsberg 3 thermal power station, 110 kV transmission network protection system *(German)* 85−9543
Voitsberg 3 thermal power station, stability and protection *(German)* 85−9725
voltage and VAr dispatch, outage prevention computer control 85−59609
voltage distribution between HV power system protection devices, additional capacitance anal. *(Russian)* 85−32224
voltage limiters design for networks with solidly earthed neutrals *(Czech)* 88−5396

power system protection continued
VVER 440 Czechoslovak nuclear reactors, control and protection systems *(Czech)* 85−59928
VVER 440 reactor unit control and safety protection system *(Hungarian)* 87−50959
XLPE insulated HV cables, Cu screen resistance and protective system operation *(Dutch)* 87−9174
SF_6 remote control circuit breakers for network fault location *(German)* 87−78816
SF_6 ring main unit for secondary distribution systems outage reduction 87−57696
ZnO arresters for lightning and switching surge protection, power dissipation determ. *(Romanian)* 88−61981
ZnO gapless surge arresters, appl. eval. in power systems 87−71747
ZnO surge arresters for multi-line underground power system 87−50866
ZnO surge divertor for electricity supply network *(Swedish)* 85−15681

standby device implementation during power system switch failures *(Russian)* 86−61680
state adaptive generation control algorithm and electric load shedding 87−42319
state appraisal using topological cct. anal. algorithms *(Russian)* 88−23250
state estimation, bad data identification using autoregressive filters 87−77932
state estimation, bad data removal, decision theory approach 87−71507
state estimation, by modified power-to-current measurement transformation 85−21053
state estimation, HV meas. calibration 88−75040
state estimation, hypothesis testing identification, new bad data analysis method 85−21111
state estimation, modified algorithm of revised simplex method 87−21823
state estimation, observability methods 88−23283
state estimation, optimal metering algorithm via sequential elimination 87−71505
state estimation, polar and cartesian coordinate algorithms, comparative study 85−43547
state estimation, robust algorithms, comparative anal. 85−43514
state estimation, topological errors identification 86−70567
state estimation, using least absolute value tracking state estimator 85−48546
state estimation and power transformer tap position, real-time processing 88−23995
state estimation bad data groups 87−4209
state estimation by binomial expansion 87−42304
state estimation for power systems, bad data suppression strategy 85−48534
state estimation for power systems, identification of bad measurement data using orthogonal transformations *(German)* 85−21093
state estimation for power systems using efficient elimination of bad data *(Korean)* 85−21070
state estimation in electrical power systems *(Spanish)* 86−61000
state estimation observability anal., bad data processing using Hachtel augmented matrix 88−10709
state estimation observability determ. using network flow technique 86−56297
state estimation solution methods 87−30080
state estimation using decoupled LP 86−50789
state estimation using general row merging algorithm 88−23302
state estimation using Kalman filtering 87−30017
state estimation using nonlinear programming 87−50614
state estimation using weighted least square approach 88−42758
state estimation with complex solution matrices, orthogonal transformation *(German)* 87−9054
state estimation with quality constraints, zero injection modes 87−71497
state estimator, self-correcting system 86−50893
state estimators reliability, mathematical formulation 86−32645
state space transient stability regions determ. using local Lyapunov surfaces 87−57480
state static estimation allowing for constraints 88−68740
state-of-the-art stability technology *(French, English)* 88−75042
static aperiodic operating stability calc. using Gershgorin theorem 87−71486
static compensation form voltage and reactive power regulation *(Croatian)* 88−5235
static compensator harmonics damping using thyristor-controlled reactor angle modulation 88−68825
static convertor and filter compensation power systems, integral equation transients anal. 85−43557
static generation reliability, calc., comparison of algorithms 85−48525
static load model, parameter estimation using Newton's method 88−75067
static power converter for power systems 88−23293
static power convertors for electric drives, power system harmonics minimization 88−62465
static reactive power compensators, power distribution systems 86−6280
static reactive-power compensator controls for improved system stability 87−35533
static reactive-power compensators in electric networks 87−9095
static reactive-power thyristor compensators on electric power systems 87−64029
static security anal. using real-time decoupled equivalent models 87−4210
static stability, anal. using catastrophe theory 87−35537
static stability, anal. using quadratic form of Lyapunov's function *(Russian)* 85−48509
static stability anal. using numerical methods 87−21826
static stability of power systems, construction of rational algorithms 85−43524
static stability of power systems with asynchronous and synchronous generators in parallel *(Russian)* 86−61040
static stability reserve estimation, load flow calc. method *(Russian)* 88−17034
static stability study based on Park-Gorev equations 87−21827
static state estimation, comparison of line flow estimator and Kalman filter 88−23303
static state estimation using Hachtel's augmented matrix method 86−18749
static state estimation with DC models and linear programming 87−21824
static thyristor compensator, choice of voltage setting under voltage stabilisation conditions *(Russian)* 88−61801
static thyristor compensators for reducing voltage fluctuations, efficiency anal. *(Russian)* 87−42360
static VAr and distortion compensators 88−48456
static VAR compensator location criteria for power system stability improvement 85−21118
static VAr compensators design using freq. response and eigenvalue techniques 87−77953
static VAR compensators for electric utilities 88−61857
static VAr compensators for improved electrical energy quality *(French)* 87−9113
static VAr compensators for power system reactive power control 88−75105
static VAr compensators for three-phase unbalanced loads balancing 87−64044
static VAr system for power system transmission capacity improvement 88−68747
static VAr systems, dynamic behaviour study by EDF *(French)* 87−15198

400 kV power transformers, earthing protection *(French)* 88−55420
400 kV transformer, tapchanger overvoltage phenomenon 86−51712
400 kV transformers, design and specifications 85−16087
420 kV transformer bushing insulator, electric field investigation of part in oil *(Hungarian)* 86−39877
500 kV, electric field around lead and insulation moulding calc. 88−69479
500 kV Chinese transformer protection unit, performance charcts. *(Chinese)* 87−51284
500 kV substations, performance and economics of three-phase verses single-phase transformers 85−39076
500 kV transmission system in Java, substation design and construction 87−42420
500 VA and less power transformer automatic design *(Rumanian)* 87−58144
630 kVA cryotransformer, design charcts. *(Rumanian)* 85−44038
630 kVA power transformer, with silicone insulating fluid, fire tests *(German)* 85−5143
725 MVA power transformers, development, testing and manufacture by Rade Koncar *(Croatian)* 85−32554
850/1100 MVA transformer, modal anal. of natural oscills. 86−39858
990 V LV distribution networks, maintenance of supply voltage *(French)* 85−59662
1050 kV pilot plant for power transmission, construction, testing 87−78065
1250 MVA transformer magnetic circuit EM investigations 88−30761
1300 MW generator with imbalanced generator step-up transformer at Rockport plant 88−30428
1500 MVA transformer set with longitudinal and transverse setting of the voltage, design and testing *(German)* 87−43153
2500 kVA 3-phase distrib. transformer with separable insulated HV connectors, ANSI standard 87−22481
2500 kVA liquid-filled distrib. transformer used in pad-mounted unit substations, ANSI standard 87−30739
2500 kVA underground-type 3-phase distrib. transformer, ANSI standard 87−22479
'green' transformer manufacture automation, lathes for construction of windings *(French)* 87−64665
AC linear power-flow model for security anal. of power systems 86−61089
AC locomotive reactive input and current deformation 88−62685
AC regulator between three-phase power supply and load transformer 86−66180
AC superconductors in static devices 87−64647
AC-DC 12-pulse convertor, with unique connection of power transformers, for LV/high-current applications 85−44082
acoustic cancellation for transformer hum reduction 86−39910
active and reactive power meas. in transformers *(Russian)* 86−18061
active noise cancellation, field meas. 88−37252
adjustable-speed drive selection and application problems 86−7195
aerial groups, anal. *(German)* 85−62896
ageing of transformer board, thermal overload *(German, Slovenian)* 86−39882
aging substation plant diagnostic examination 85−60264
air-cooled/water-cooled transformers, for electric glass melting, thermal considerations 85−27485

power transformers continued
air-core power crowbar transformer for theta pinch expts. 85−60254
air-tight distrib. transformers, operating conditions and failure rate *(Polish)* 88−75689
amorphous alloy cores for switching regulator appls. 86−68173
amorphous alloys for transformer cores 88−43250
amorphous alloys for transformer cores, power distrib. systems appls. 87−71646
amorphous core dry distribution transformer, 25 kVA, design 88−69465
amorphous core transformer with lower losses 88−37265
amorphous core transformers, US development *(Chinese)* 86−56798
amorphous cored distribution transformers, commercialisation potential 87−51332
amorphous metal core power transformers, economic considerations 87−51333
amorphous metal foil for brazing copper electrical joints 86−66144
amorphous metalcore distrib. transformers, field performance study 86−39897
amorphous soft magnetic alloys, practical appls. 87−46327
amorphous steel core transformers for greater loss reduction 87−58171
anisotropic laminated core, windings periodic distrib., transient resistance and inductance *(Russian)* 87−78738
anisotropic laminated core transformer equivalent scheme *(Russian)* 86−6848
annual operating strategy, HV/MV transformers power reserve computer-aided forecasting *(Italian)* 85−21181
arc furnace transformer load current symmetrisation by booster transformer ratio control 87−35998
arc furnaces, power supplies from secondary transformer windings improvement improvement by geometrical modification *(Slovak)* 87−51638
arc steel smelting furnaces, power swings, probabilistic appraisal *(Russian)* 87−43677
arc welding monophase transformer coil design and manufacture *(Rumanian)* 87−58491
arc welding moving limb transformers performance anal. 87−58490
arc welding power sources, operating conditions 86−66514
arc-dressing factory power control using transformers with voltage-polarised relays *(Russian)* 88−49324
askarel filled transformers, TransForm in-service reclassification process 87−72216
askarel insulated transformers, safety, public opinion and regulations *(German)* 85−60242
askarel substitution, use of silicones *(Italian)* 88−37276
askarel transformer retrofilling *(French)* 88−5746
askarel transformers, PCB reconditioning process 88−62426
askarel transformers, reclassification to non-PCB, field appls. and results 88−75704
askarel transformers rehabilitation *(French)* 88−5745
askarel-immersed transformers, on-site maintenance *(French)* 88−5744
asynchronous motor with nonsinusoidal supply potential, low frequency vibrations 86−39770
asynchronous traction with low weight supply circuit transformer fed from 16 2/3 Hz line 88−69862
automated design, multicriterial optimisation *(Russian)* 87−58169
automated winding checking system *(Russian)* 87−30709
automatic device for protecting motors against damage *(Russian)* 88−75553
automatic meas. and data acquisition system, for quality control *(Japanese)* 87−72207
automatic tap change control for supergrid transformer substations 87−4771
automatic testing system for distribution transformer *(Japanese)* 87−41347
automatic voltage regulators, BAURPN-1 and BAURPN-2, for power transformers *(Russian)* 86−61544
automatic voltage regulators for supply network power transformers, parameter adjustment *(Russian)* 86−66122
autotransformer, nonlinear operation of neutral line *(Russian)* 87−64664
axial coil insert monitoring of power transformers with special applications *(German)* 85−39055
axial force calc. during short circuit in windings 87−58159
axial winding clamp force meas. using strain gauges *(German)* 88−55397
balanced and unbalanced circuits in optimisation of power supply centres *(Russian)* 88−55393
BASILONE M 50 EL silicone based coolant for power transformer insulation *(Italian)* 88−30772
battery-fed, high power, HF converters, parallel operation, develop., charcts. 88−69565
BC Hydro, power transformer capacity additions criteria 88−11278
biocorrosion of transformer oil *(Czech)* 87−72178
Blackwater HVDC Station (USA) four-winding convertor transformer with stray reactances 86−70601
booster transformer equivalent circuit *(Slovenian)* 88−37263
Brown Boveri's new cast-resin transformer 85−65291
bubble formation in transformers 88−5754
Budapest suburban railway, past, present and future of electrification and power equipment *(Hungarian)* 88−24239
bushing electrostatic field distrib., charge simulation method 88−69464
bushings, chromatographic testing of oil *(Russian)* 86−45472
bushings, seismic anal. and testing 86−51707
bushings and connections for large power transformers 86−51716
bushings for outdoor power apparatus, IEEE standard performance charcts. and dimensions 85−53742
cable limiters for three phase padmounted transformers 85−27477
CAD of power supplies in machine tool industries *(Slovak)* 85−21182
CAD programs and results 86−56811
CAD system *(Japanese)* 87−72206
capability calculation for nonsinusoidal current supply, ANSI/IEEE standard 88−62421
capacitance parameters of system of cond. bodies from expt. data *(Russian)* 86−3603
capacitive voltage transformers and HV transformer bushings, diagnostics *(Italian)* 86−56807
capacitor and transformer insulating liquids, behaviour evaluation using partial discharge method 86−51718
capacitor switching effects on transformer transients, digital simulation 88−49025
capacitor voltage transformers with improved transient response charcts. *(Croatian)* 85−32556
capacity optimisation model allowing for design load dynamics *(Russian)* 86−26108

power transformers continued
capacity-expansible transformers, development *(Japanese)* 87−4767
cast resin dry type transformers, safe, reliable, cost effective alternative insulation 85−16076
cast resin filled transformers, alternatives to PCB insulation *(Dutch)* 86−19344
cast resin transformer, 3-phase, 33 kV, 4000 (FA)/3000 (NA) kVA, disassembled delivery, on-site assembly *(Japanese)* 87−72211
cast resin transformer from Holec, proof tests for fire resistance *(Dutch)* 87−78726
cast resin transformers, construction methods, unique properties 85−32532
cast resin transformers, Takaoka class F of 6-200 kVA series *(Japanese)* 85−39068
cast resin transformers avoid fire and pollution risks *(Chinese)* 87−15822
cast resin windings for HV power transformers, operation and comparisons *(Croatian)* 85−32555
cast-coil transformers, epoxy materials fire-testing 86−51674
cast-resin dry-type transformer, fire risk assessment 85−53730
cast-resin transformers for rooms and rooftops 85−39062
cellulosic insulation improvement for distribution and power transformers 87−64675
cement works electrical equipment, Brown Boveri process control and power electronics systems 86−26457
Chinese electric machine industry progress (1949-84) 87−42811
chlorine production plant, power system and electrical equipment 85−16507
choice of the grounding transformer 86−51133
chokeless welding transformers 85−21681
circuit breaker behind transformer, calc. and meas. of transient recovery voltage 86−33549
clamped series inverter with transformer coupled load, Fourier anal. 87−43260
clean wave VVVF for cooler of transformer *(Japanese)* 87−43214
closed-loop ferroresonant transformers, load charact. 86−6832
coaxial turn transformer layout and model test results 87−35995
cogeneration station link with regional MV network *(Dutch)* 88−43027
coil winding intensification of heat exchange 88−30760
cold start performance of power transformers and shunt reactors for arcticregions 86−39894
common use transformer, supplying single-phase power for lighting and 3-phase power for other use *(Japanese)* 85−39065
commutation supervoltage production using cascaded transformers, operation, technical details, design *(Romanian)* 88−62406
compact, high efficiency, more reliable power transformers from Mitsubishi 88−5740
compact pole-mounted transformer *(Japanese)* 86−61566
compensated Darlington power switches with appl. to high current bipolar transistor invertors with output transformers 85−61102
complex three-dimensional electric field computation by optimum charge simulation *(Chinese)* 86−36641
compression structure CAD, stress-strain state parameters calc. 87−58152
computer aided calculation and design *(Spanish)* 86−26110
computer power protection selection 88−5780
computer program, MSR-2, for stray-field anal. *(Polish)* 86−33465
computer program for transformer loss evaluation, electric utility experience 85−32561
computer-aided design of 10-35 kV transformers 85−5156
computerised online inspection system for on-pole power transformers *(Japanese)* 85−39069
computerised online monitoring of power transformers 85−32551
conductive or magnetic screen field distrib. and loss calc. and meas. 87−36002
connecting busbar differential protection operating principles *(Russian)* 87−43149
connectors in three-phase distribution systems, IEEE standard 87−22495
construction industry, 11th and 12th Five-Year Plans effects 87−58153
contacting and noncontacting rotating transformers, structural and topological analysis *(Russian)* 88−37258
continuously variable line transformer and its application in a high power amplifier *(German)* 85−22673
controlled rectifier ultimate power indices *(Russian)* 85−21733
converter transformers and smoothing reactors, recommended dielectric tests and procedures 86−66129
convertor transformer winding losses, harmonic comp. depend., anal. *(Russian)* 86−51696
cooling, efficiency of heat exchange in banks of rough tubessubject to transverse streamline flow *(Russian)* 86−39898
cooling radiators, heat-exchange element heat transfer 87−58157
cooling system, calc. of forced directed oil-circulation rate through ducts 87−64659
cooling system thermal and hydrodynamic process control and boosting *(Russian)* 88−11265
core and winding design 87−51290
core design documentation *(Dutch)* 87−72180
core loss meas., on load and open ccts. 85−39073
core losses 86−51678
core losses, additional *(German)* 88−17703
core magnetic nonlinearities, modelling 87−72218
core material improvements, insulation and earthing *(Dutch)* 87−72179
core material testing using microprocessor based measuring instrument 87−30719
core saturation waveform distortion, Fourier analysis program for calculator 86−12867
core sheet power loss factors and alternative materials *(Dutch)* 87−72181
core-demountable transformer, 275 kV, 300 MVA, config. with transportation system *(Japanese)* 87−9632
cores, appl. of magnetic amorphous ribbons *(Polish)* 86−39903
cores, magnetic materials for losses reduction *(Italian)* 87−51299
cores made from grain-oriented steel, process factors 86−36050
cores using magnetic amorphous metals, feasibility 87−58136
creative power appls. of magnetics, review of last 35 years 88−39799
creepage flashover characteristics of oil/pressboard interfaces and their scale effects 87−35985
cross-regulating transformer, appls. in supply networks, control of active power *(Swedish)* 86−19342
cryogenic and N_2 cooling, effects on charact. and load capacities *(Russian)* 87−58163
cryogenic pulsed power transformers for EM launcher 88−43256
cryogenic torquer/positioner for space appls. 87−35945
Cuk convertor, DC-isolated, transformer saturation control 86−26120

power transformers continued
current and voltage analysis during feeder single phase interruption *(Slovak)* 86−56813
current and voltage instrument transformers, measuring installations, testing *(German)* 88−37259
current distribution in transforms with multiparallel helical windings under steady-state conditions *(Russian)* 85−44039
current rectifier transformers for high voltage direct current transmission plants *(German)* 85−16071
current transformer, single stage, error and residual induction meas. using algorithms *(Russian)* 86−12876
current transformer performance study for inrush current 88−62405
current transformers, frequency characteristics of amplitude and phase *(Russian)* 88−17692
current transformers for protective relaying appls. 88−75692
currents induced in magnetic systems of power transformers 85−44056
Czechoslovak and international standards *(Czech)* 87−51296
Czechoslovak products range manufactured by ZSE EJF *(Czech)* 88−17766
Danish State Railways electrification *(Danish)* 85−27724
DC and AC paper machine drives, appl. of isolation transformers 88−76066
DC arc and plasma arc furnaces, operating parameters comparison *(Polish)* 88−62779
DC excitation for magnetisation charact. meas. of power transformers and reactors 87−30725
DC paper machine drives, appl. of isolation transformers, service perspective 88−76067
DC substation equipment for subways, Meidensha's achievements 85−5278
DC thyristor electric drives with multiwinding converter transformers 86−33738
DC-DC resonant convertor tolerance to transfer nonidealities, resonant topologies in HVDC engng. 87−51377
DC-DC transformer for electric traction, anal. of configurations *(Italian)* 88−18156
DC/DC power convertors for locomotive appls., MF power transformer study 88−69867
DC/DC resonant power convertors for X-ray generator appls. cct. anal. and testing 88−75782
design, construction and operation for power station appl. in USSR *(Russian)* 86−66136
design, mathematical calcs. 85−60229
design, testing and develop. history of power transformers 86−56808
design, transient effect calc. 85−60225
design considerations of power transformer 86−66115
design modifications for meeting various specifications and standards 85−16079
design optimisation based on automated search and control system *(Russian)* 87−22463
design optimisation methods *(Polish)* 85−60249
developments in 1880s, effects on electricity supply industry 85−32529
diagnostic methods for power transformer insulation 87−35982
diagnostic testing and fault location *(Italian)* 86−56805
diagnostic tests in service, partial discharge detection and gas-in-oil anal. 88−69481
diagnostics based on gas chromatography *(Polish)* 86−26103
diagnostics of dielectric failures *(Italian)* 86−56806
dielectric charact. of transformer oil, influence of dissolved water, air and mechanical impurities 86−56803
dielectric strength of interlayer insulation of multilayer winding transformers 85−48999
differential mode EMP isolation transformer 86−39893
differential protection, magnetising and unbalanced current surge elimination *(Russian)* 86−39864
differential protection response speed standardisation, USSR standards *(Russian)* 87−4755
differential relay protection using RNT and DZT relays, current shape distortion detector, UB type *(Russian)* 88−17679
differential relaying protection 87−43140
differential relaying protection, new approach 87−43142
digital differential protection of power transformers, nonlinear model 87−30746
digital modelling of lightning overvoltages on cable input connection to transformer station 87−15362
digital phase-controlled switching cct. for fault current study 87−72224
digital transformer differential protection 86−19323
digital wattmeters for loss measurements of power transformers 87−35123
direct arc ferrous melting furnaces, oil-immersed transformer electrical and mechanical charact., ANSI standard 87−36257
discrete failure analysis, constancy testing for hazard rate using score statistic, power transformer appl. 87−31347
disk coil transformer windings, axial stability studies 86−39886
dissolved gas anal. for power transformer fault detection 87−64643
dissolved gas anal. for transformer fault detection, Central Power Research Institute experience 87−64644
dissolved-gas monitoring for failure anticipation, Hydran system 87−78734
distributed voltage control schemes using under-load tap-changing transformer 88−24003
distribution, breakdowns, regular maintenance 85−21685
distribution, power and regulating transformers, short-circuit testing and test code, IEEE standard 87−22486
distribution and pole-mounted transformers, develop. trends *(Japanese)* 88−62413
distribution and power transformers, terminal markings and connections, ANSI standard 87−22484
distribution and power transformers, terminology, IEEE standard 87−22485
distribution network, surge diverters with steep fronted impulse voltage, performance 86−44967
distribution network asset replacement considerations 87−57617
distribution network for commercial props., pole line equipment and accessories 87−64188
distribution network outage state optimal load allocation using sectionalizing switches 88−23454
distribution network transformers, choice of voltage regulator adjustments, optimisation method *(Polish)* 86−61540
distribution network transformers, optimal reliability and economic reservation strategies *(Hungarian)* 88−5334
distribution networks, feeder, branch and service entrance circuit design, transformer grounding example 86−56412
distribution networks, power transformers as links *(Czech)* 87−51295

power transformers continued
distribution networks, transformer sizing and economical loading *(Russian)* 87−15250
distribution networks, voltage regulator selection 88−61920
distribution system design, probabilistic techniques appl. 88−10898
distribution system performance, improvements by automation 88−23464
distribution transformer, large, coarse winding connection with divided secondary winding for increasing capacity 85−21669
distribution transformer, oilless 100 kVA, materials selection for reduced core losses 85−39079
distribution transformer aging and reliability 86−39915
distribution transformer design optimisation by linear programming *(Polish)* 86−51688
distribution transformer development 85−32544
distribution transformer failure, operation, manufacturing defects and maintenance 85−48990
distribution transformer failure analysis, causes and protective measures 88−43241
distribution transformer failure costing using statistical methods 88−68928
distribution transformer faults on 11 kV radial distributor, remote detection 87−51329
distribution transformer insulation systems, improvement of fire resistant characts. 85−60266
distribution transformer loss testing using uncertainty calculations 85−27462
distribution transformer losses optimisation *(Polish)* 86−19340
distribution transformer no-load loss reduction by Metglas core alloy 86−45468
distribution transformer no-load losses, factors and correction 85−32550
distribution transformer oil cooling, EHD pump system, research 85−16070
distribution transformer oil cooling by EHD dielectric pump 86−12880
distribution transformer overcurrent protection methods 88−75163
distribution transformer primary to secondary neutral isolation devices and systems responses 87−72199
distribution transformer protection, techniques for failure reduction 85−16077
distribution transformer protection using HV current-limiting fuses 88−75164
distribution transformer protection using oil temp. monitoring *(German)* 88−69447
distribution transformer selection, computer-aided, rank ordering approach 87−72225
distribution transformer steep-front short duration LV impulse performance 88−24001
distribution transformer verification by KEMA, 14 years of experience *(Dutch)* 85−32535
distribution transformer voltage unbalance anal. 88−68926
distribution transformer winding losses due to nonsinusoidal currents 87−35987
distribution transformers, 25 kVA, 15 kV, design using pancake coil winding 85−9966
distribution transformers, agreement of Cenelec and Dutch national standards *(Dutch)* 85−32536
distribution transformers, amorphous core material considerations *(Dutch)* 85−32537
distribution transformers, at fire endangered locations, evaluation criteria *(German)* 85−5140
distribution transformers, compartmental-type, electric dimensional and mechanical characts., ANSI standard 87−22477
distribution transformers, compartmental-type, electrical dimensional and mechanical characts., ANSI standard 87−22476
distribution transformers, design and economics of amorphous ferromagnetic alloys 87−51306
distribution transformers, design and manufacture 88−5729
distribution transformers, design trends 85−27460
distribution transformers, equivalent circuits for surge simulation *(Spanish)* 87−4765
distribution transformers, failure causes and protection 85−16089
distribution transformers, liquid losses calc. using average loading method 87−51304
distribution transformers, liquid-immersed, fire behaviour 87−15834
distribution transformers, oil and resin insulated, fire protection *(German)* 85−21683
distribution transformers, oil insulated, computational anal. of explosion methods 88−55407
distribution transformers, oil-immersed, IEEE standard test procedure for thermal evaluation 87−22468
distribution transformers, optimal sizing and replacement 86−61576
distribution transformers, ratings, cooling and insulation of various types *(German)* 85−44036
distribution transformers, switching-in current surges, effects and protection *(Finnish)* 85−44028
distribution transformers, technical details, standards and applications *(Italian)* 85−39078
distribution transformers, use of insulating oils 86−68106
distribution transformers, using amorphous metal alloys, design concepts 85−21686
distribution transformers as resistance ground sources for power system protection, design 85−43647
distribution transformers improved lightning protection, cost-benefit anal. 87−43175
distribution transformers load data memory system for winding aging anal. 88−17706
distribution transformers loss costing for tariff setting 86−50868
distribution transformers protection, new concepts in moulded case circuit breakers and HV fuses 87−43143
distributor transformers technical fire risk, assessment method *(German)* 85−32557
divertor switches switching capacities 85−53741
double resonant transformer, 500 kV, for HV probes and resistor materials testing 87−22509
dry, open winding transformers, Securamid Project, Nomex insulation, standards 88−37275
dry power transformer with forced cooling, temp. field thermal design 87−58156
dry transformer insulation, fire resistance 86−12871
dry transformer materials, fire resistance eval. methods *(French)* 88−5748
dry transformers, insulation materials, technology and characts. *(French)* 88−5749
dry transformers, thermal conditions anal. *(Russian)* 87−64663

power transformers continued
dry-type distrib. transformers for solid state apps. 88−62425
dry-type distribution and power transformers, test code, IEEE standard 87−22487
dry-type general purpose distribution and power transformers, IEEE recommended practice 86−51697
dry-type power transformer overload allowing for temp. effects 86−51682
dry-type transformer insulation materials, behavior under elec. and thermal stress 86−70964
dry-type ventilated and N_2 filled transformers, loading guide, ANSI standard appendix 87−43169
dynamic pi-equivalent under tap ratio change 88−69466
earth faults in HV power network, mode impedance influence *(Czech)* 87−35606
earthing methods for power transformer substations *(German)* 85−60237
economic criteria in setting limiting parameters 88−43239
economics, factors for replacement of distribution transformers 85−16086
eddy current influence on flux leakage study using FEM *(Polish)* 87−64671
eddy current losses in tank wall 87−72194
eddy currents, finite element anal. for power transformer winding parallel conductors 86−19346
eddy currents and losses calc. in nonmagnetic compressed components, using planar model *(Czech)* 87−9615
efficiency improvement margins for transformers *(Russian)* 88−62414
EGRID, automatic mesh generator for transformer designs 86−39891
EHV, short-circuit testing experience *(Korean)* 85−32553
EHV large-capacity gas-insulated power transformer for underground substations *(Japanese)* 86−39899
EHV power system overvoltages, transformer saturation effects 85−44042
EHV transformer, electric field intensity around elbow-shaped connection, numerical anal. *(Chinese)* 85−5146
EHV transformer failure anal. 88−75698
EHV transformers, dielectric strength requirements and tests *(Polish)* 85−60253
EHV transformers, influence of electrostatic plate construction around winding ends 86−70963
electric booster melting equipment specifications for glass industry 85−54005
electric locomotive transformer details for Sardinian main line railway *(Italian)* 87−79055
electric natural oscillations in power transformers, modal parameters *(German)* 85−39061
electric power facilities at Edmont hotel, Japan *(Japanese)* 86−65681
electric power facilities at Metropolitan hotel, Ikebukuro station, Japan *(Japanese)* 86−65680
electric power supply for Channel Tunnel, proposals, overview 86−32733
electric traction conversion circuits, inductors, transformers and reactors, EMC, losses, thermal effects 88−18183
electrical appliance aging due to power system voltage harmonics 86−66133
electrical equipment, maintenance programs, reliability 87−72108
electricity supply systems with transformer loads, nonsinusoidal conditions calc., varied states method *(Russian)* 87−4205
electricity supply to Zurich international airport *(German)* 86−70966
electromagnetic field equations for transformer with toroidal laminated core *(Russian)* 86−66141
electromagnetic oscillations calc. considering core flux for transformer windings *(German)* 86−12872
Electromagnetic Transients Program application guide 87−35542
electronic current sources in electrotechnology *(German)* 87−58146
electrostatic charge generation in the insulating systems of transformers *(Polish)* 87−22467

FETs, new generation, charact. and microwave appls. 85−1607
field effect power transistors, power electronics appls. *(Russian)* 85−55817
floating power MOSFET switch, high performance driving circuit, CAD using SPICE 2 88−39496
FM solid-state transmitter, design 88−35661
four quadrant three pulse transistor rectifier 85−27540
four-quadrant hybrid chopper using transistor switching, theoretical operation anal. *(Slovak)* 88−62438
fractional horsepower DC motor drives, SENSEFETs for lossless current sensing 86−65243
FRED-FET module, high current, dynamic behaviour, ruggedness 88−71584
FREDFET, a new power MOSFET with fast recoveryreverse diode 86−21607
FREDFET, new power MOSFET with fast-recovery internal inverse diode 85−6978
FREDFET power half-bridge with short-cct. protection and overvoltage detection 88−566
FREDFET power MOSFET with high speed invertor diode *(Italian)* 86−63285
frequency convector, transistorised, for three-phase induction motor supply *(Hungarian)* 86−12889
frequency convertors, using power transistors, for feeding asynchronous motors *(Finnish)* 85−44066
Fuji Electric switching power transistors, develop. and design strategies 88−71486
Fuji switching power transistors, development and design 86−15134
future trends in semiconductor switching for power technology 86−35664
GaAs 6-W FET for 14 to 14.5 GHz band 87−73776
GaAs ion-implanted FETs; MMIC compatible, power optimisation using large-signal modelling 87−38297
GaAs microwave MESFET with extremely low distortion 87−73750
gain props. for moderate and high collector current levels 87−6668
GE-SMART, intelligent solid-state power switches, design and appls. *(German)* 87−10655
GEMFET/Darlington combination for medium power switch 87−45927
Generation III bipolars for higher freq. switching, losses reduction 88−71536
GTO inverters with energy recovery by passive network, snubber configuration 88−69555
Gummel-Poon model parameter optimization for a power transistor 88−44747
HBT, with variable-gap collector, switch-on response time 88−39401
heat pump with variable speed motor and controller, reliable operation using switching transient analyser on transistors 87−29011
heat sink design, steady state thermal CAD analysis of a composite transistor package 87−72861
HEMT, single/quadruple power heterojunction, 35-GHz performance 87−6077
HEMTs, power transistor performance, 15 GHz 85−28722
HEXFET, protecting power MOSFETs against avalanche breakdown 87−53542
HEXFET forward convertor for switched mode power supply appl. 85−49718
HEXFET III power MOSFETs from IR 87−60449
HEXFETS improve switch-mode power supplyreliability 85−54653
HEXFETs in three-phase bridge invertor hybrid packages make compact motor drives 86−34543
HEXPAK, high power HEXFET module for control and power conversion appls. 87−52380
Hexpak HF high-power MOSFET package 86−47634
HF elec. process heating, appl. of solid-state power devices and ccts. 86−67019
HF electric process heating appls., solid-state power devices and ccts. 86−61810
HF generator with power MOSFETs *(German)* 85−61137
HF high current monolithic switching regulator in bipolar CMOS/DMOS technology 87−44561
HF high current transistor chopper using Darlington switches medium power convertors 88−17750
HF power conversion, conf., San Diego, CA, USA (May 1988) 88−70012
HF power conversion, conf., Virginia Beach, VA, USA, 1986 87−31152
HF power convertors, storage effect in HV bipolar transistors *(French, English)* 88−62431
HF power devices, development and performance *(Japanese)* 86−35625
HF resonant power convertor anal. using switching power transistor output port model 88−30932
HF SMPS using bipolar and MOSFET switches 88−69594
HF stabilised constant-voltage frequency convertor with resonance LC and AC power circuits *(Russian)* 86−66162
HF switching circuits using power MOSFETs 87−59157
HF switching convertors using power FET modules 87−51340
HF switching on 380/440 V industrial networks *(French)* 87−58184
power transistors continued
HF transistor amps., phase response calcs. 87−59205
high current power semiconductor modules, cooling, factors and computer aided anal. 85−54149
high peak power transistors for phased-array radars inL band and S band 86−53062
high power microwave transistors 86−53039
high power semiconductor devices, power capability handling *(Japanese)* 85−1544
high power semiconductor structures modeling, volt ampere characteristics direct branch calculation *(Russian)* 86−28250
high speed switching power modules *(Italian)* 87−53498
high voltage power Darlington transistors for induction heating applications 88−76050
high-current emitter-switched transistors, snubbers minimisation, voltage clamps 88−70539
high-power high-frequency transistor switch *(German)* 86−28283
high-power microwave transistors, matching conditions determ. 87−45267
high-power MOS-gated structures, appls. 86−47590
high-power semiconductor device characteristics and trends 86−67821
high-power semiconductor device switching, electrodynamic constraints 87−60384
high-power transistor choppers, voltage and current conditions *(Slovenian)* 86−13976
high-power transistor PWM invertor with complete switching energy recovery 87−22599
high-speed driver for switching power MOSFETs, push-pull invertor config. using complementary bipolar pair 88−31989
high-speed power devices with field control 86−21545
high-speed power negative-resistance device by using complementary SIT 87−18157
high-speed switching of the power transistor in a DC-DC converter with current feedback and core saturation 87−52332
high-temperature power semiconductor electronics, T>300°C, materials/device technologies 87−45843
high-voltage bipolar power transistor with extended RBSOA, small emitter structs. 86−47546
high-voltage convertors, power transistor series connection 88−37309
hollow emitter, for high voltage/high amperage operation *(German)* 85−18295
hollow emitter power transistors for switching power supply appls. 87−11756
HV, high current, nondestructive forward bias safe operating area testing 85−23751
HV, high power switched MOS transistors for transformerless power sources *(Russian)* 86−41783
HV ASIC for half-bridge based power transistor 88−70540
HV bipolar devices, device simulation tools 87−67236
HV bipolar mode JFET with normally off charact. 86−21554
HV bipolar power Darlington, paralleling 86−58458
HV bipolar transistor PWM convertor with transformer coupled direct base drive 88−30912
HV bipolar transistors, HF drive methods for memory effect reduction *(French, English)* 88−39382
HV bipolar transistors for mains supply ccts., selection criteria *(German)* 86−35653
HV convertors, invertors and choppers using in-series power transistors 88−75823
HV Darlington transistor, saturation voltage and current gain coefficient 88−13333
HV devices, surface pot. profiling using scanning Auger microscopy 85−34941
HV devices for power ICs, comparison 85−50664
HV DMOS transistor with very large area for high power 87−74332
HV EDT bipolar transistor structure, technology and cellular model *(French)* 87−53480
HV electro-optic driver with DMOS power FETs and optocoupling isolation 88−70563
HV heavy current transistors for 15 kVA invertors *(French)* 86−58459
HV level translator IC for driving P-channel power MOSFET 88−71821
HV MOSFETs, development of fast operating lightly loaded devices 85−23822
HV NMOS transistors, DC and switching performance, SIPOS passivation effects 87−46016
HV PMOS transistors using n-well CMOS technology 88−19973
HV power MOSFET invertor for 380 V AC line 87−22596
HV power switching transistors under forced gain and inductive load-turn-off conditions, simulation 88−26213
HV power transistor switching elements, problems in technology develop. 87−32482
HV power transistors, base and collector current pulses arbitrary parameters, transients anal. 88−13332
HV power transistors, silica glass passivation technique 87−60423
HV push-pull amplifier, bridge type config. using DMOS power FETs 87−37021
HV RF bipolar transistor for CRT driver ccts. 85−6893
HV transistor, new technology from Thompson Semiconductors *(French)* 87−60426
HV transistor fabrication using Si wafer direct-bonding technique 88−39482
HV transistors, multi-epitaxial mesa process 88−1633
HV transistors, new technologies *(Spanish)* 85−12231
HV transistors, Thomson Semiconductor ETD family, struct. and charact. *(French)* 87−74269
HV transistors for CRT display appls. *(Japanese)* 86−58455
HV VDMOS devices, quasi-saturation region anal. 87−38314
HVIC, high-voltage device modelling for SPICE simulation and CAD 88−39565
HVIC MOSFET driver for power supply appls 88−75812
hybrid insulated-gate dipolar transistor, power switching device, struct. and charact. study 88−71523
hybrid Schottky injection FET, MOS-gated power device, struct., anal. and charactn. 87−46004
hybrid Schottky injection MOS-gated power transistor, struct. and charact. 87−6697
ICePAK isolated power package for DC motor control 88−48993
IGBT performance trade-off, buffer layer versus base lifetime reduction 88−1659
IGBT with ultra-fast free wheeling diodes for power convertors 88−13408
IGT, *n*-channel device, 50 A, 1200 V, design and charact. 86−15160

power transistors continued
IGT, cell geometry effect on latch-up 86−2161
IGT power transistors for motor control appls., second generation devices 86−35731
IGT/COMFET latching characteristics and application to brushless DC motor drive 87−32520
IGT/COMFETs for driving brushless DC motors, latching current charact. 86−40910
III-V transistors for mm-wave applications, review 88−19399
impact of die bond voids in power semiconductor devices on thermal resistance and long term reliability (an analytical approach) 88−1609
improved bipolar-mode MOSFETs (IGBT) with self-aligning technique and wafer bonding (SDB)−why is the bipolar-mode MOSFET SOA large? 88−19940
induction cooking appliance, utilisation of high power transistors 86−61812
induction heating inverter using power MOSFETs and PLL control, operation and anal. 88−43264
induction motor drives with vector current control transistor converter 86−66396
induction motors, single phase, power controller development for efficiency improvement *(Korean)* 85−60198

VMOS transistors, appl. in power convertors *(German)* 85−22650
VMOS transistors, high-power, heavy-current pulse shapers design 87−44711
VMOS UHF power transistor model, expt. verification 86−2149
voids and cracks effects in power chip packages, thermal investigation 87−51880
voltage convertors, transistorised, semiconductor diodes parameters selection *(Russian)* 85−21727
voltage invertor, three phase, multistepped, combined with single phase through switching devices 85−5192
voltage regulator, very-low-drop, p-n-p transistor structure appl. 87−52346
voltage source invertors and current source invertors using thyristors and transistors 88−30881
X-band power FETs and monolithic amplifiers, ion implantation fabrication 87−6157
Z-series 1200 V bipolar transistor with 750 V short-circuit current withstand capability 88−44746
AlGaAs/GaAs heterojunction bipolar power transistors 85−34934
n-AlGaAs/GaAs power 2DEGFETs, surface undoped struct., Ka-band 86−62826
AlGaAs-GaAs HBTs for power appls., design and performance 88−39418
AlGaAs-GaAs TEGFET, breakdown voltage near pinch-off, 2D model *(French)* 88−57683
AlGaAs-GaAs multiple quantum well FET struct., power appls. 88−44780
AlN and SiC substrate advanced ceramics for high power and microwave circuitry, eval. 87−73156
Au/Al wire bond reliability, Tl effect 85−55792
GaAs C-band power FETs, intermodulation distortion, bias load impedance and profile design effect 85−6976
GaAs FET and MODFET ESD effects 88−50900
GaAs FET, gradual degradation under normal operation 87−1557
GaAs FET, microwave appls. 86−41782
GaAs FET, n^+ ledge channel struct. fabrication with single lithography step 86−2152
GaAs FET performance simulation 86−35671
GaAs FET pulse amplifier, with subnanosecond settling time 86−67489
GaAs FET small-signal models, DC load line charcts., optimum power match 87−6728
GaAs FET specifications guide 87−53541
GaAs FETs, X-band, 3 W devices for satellite appls. *(Japanese)* 88−7050
GaAs FETs, high-power, MBE grown, 14 GHz communication satellite transmitter amplifiers appl. *(Japanese)* 86−27614

power transistors continued
GaAs FETs, high-power devices for X- and Ku-bands, fabrication, charcts. and performance 88−71108
GaAs FETs, prospects for power capability at mm-wave freq. 87−45271
GaAs HEMTs and MESFETs, power characteristics and saturation mech., investigation 88−63902
GaAs MBE power FETs, K_a-band high efficiency 85−1064
GaAs MESFET, HV behaviour, role of device surface, 2D simulation 87−1551
GaAs MESFET power devices with very high performance, design 88−12614
GaAs MESFET, power limitations, dynamic modelling 85−45718
GaAs MESFET, recessed-offset-gate, electron-beam direct write asymmetric overhang 88−985
GaAs MESFETs for broadband control appls., linear/nonlinear props. charactn. 87−45965
GaAs MESFETs, high-efficiency Ka-band flip-chip mounted devices, fabrication and charcts. 87−59847
GaAs MM-wave monolithic power FET amplifiers 88−38743
GaAs MM-wave power MESFET with pulse-doped InGaAs channel 88−50359
GaAs PBT, 22 GHz small-signal and power performance 88−71075
GaAs SITs for use up to X-band, development and projected performance charcts. 88−7628
GaAs Schottky-drain power FET for microwave appls. 86−21590
GaAs V-groove barrier transistor, n^+-i-δ (p^+)-i-n^+ struct., MBE grown, design, charcts., VHSIC appls. 86−20852
GaAs X-band MESFET, power handling capability and reliability improvement 88−1027
GaAs X-band power FET, 2.5 W, design and performance 86−53063
GaAs coplanar device structs., surface treatment effects, wave propag. effects 87−25322
GaAs, effects of polymide and Si_3N_4 passivating layers 88−13415
GaAs impulse-doped power FETs for high efficiency operation 88−50353
GaAs internally matched power FETs 87−6133
GaAs microwave FETs, recent developments and appls. in Japan 86−47083
GaAs microwave discrete and IC components, technology from Japan 87−32061
GaAs microwave high-power devices, progress 88−12611
GaAs microwave power FETs and MMICs, refractory self-aligned gate technology 88−50362
GaAs microwave power MESFET, theory and practice 86−14500
GaAs microwave power MESFETs, reliability study using accelerated stress testing 88−1026
GaAs microwave power MISFET with undoped AlGaAs as insulator 85−11562
GaAs n^+-i-δ(p^+)-i-n^+ V-groove barrier transistor, MBE growth 85−34940
GaAs permeable base transistor, high power-added efficiencies at 1.3-20 GHz 88−38767
GaAs power FET, HV DC screening, effect on burn-in yield and catastrophic failure modes 86−15178
GaAs power FET, RF life test using temp. compensated elec. stressing 87−1558
GaAs power FET, RF performance sensitivity rel. to process-dependent parameters 88−38766
GaAs power FET, design for C-band operation 85−17869
GaAs power FET for microwave ICs, design using combined flip-chip/via-connection technologies 85−40247
GaAs, power FET, high performance, MBE growth 86−7801
GaAs power FET prep. by ion implantation 86−21575
GaAs power FET, sensitivity as light transducer, expt. study 85−40730
GaAs power FET series for X to Ku band *(Japanese)* 86−58065
GaAs power FET structs., optimisation 85−45734
GaAs power FETs, X-band, high power pulse reliability 87−1000
GaAs power FETs and MIC amplifiers, reliability, high-temp. life testing 85−6531
GaAs power FETs, design and performance from C to Q band 85−45249
GaAs power FETs, improved performance using Be co-implantation 87−38269
GaAs power FETs, ion-implanted devices, high power/efficiency, C- and X-bands 86−8490
GaAs power FETs, large-signal modelling technique, microwave cct. CAD tool appl. 86−14536
GaAs power FETs, matching using large signal modelling technique 87−11781
GaAs power FETs, n^+ ledge channel struct. optimisation 87−25290
GaAs power FETs, source-drain burnout charcts., hot electron effects, numerical simulation 85−34997
GaAs power FETs with gate recess narrower than gate, microwave performance 86−41794
GaAs power MESFET, MM-wave, prepared by gas source MBE 88−1680
GaAs power MESFET, breakdown voltage near pinch-off, 2D model *(French)* 88−57683
GaAs power MESFET, design, modelling fabrication and performance, SHF amplifier appl. 88−63919
GaAs power MESFET for Ka-band operation, 41% power-added efficiency at 35 GHz 88−32427
GaAs power MESFET, gate-lag effect develop. during ageing 87−32511
GaAs power MESFET, low-distortion K-band device, MBE fabricated, struct. and charcts. 88−56922
GaAs power MESFET, microwave charcts. and load-pull contours prediction 87−6116
GaAs power MESFET packaging, design aspects 86−53676
GaAs power MESFET performance sensitivity to profile and process parameter variations 88−71055
GaAs power MESFET, pulsed conditions performance 86−53064
GaAs power MESFET reliability aspects and failure mechanisms 85−6952
GaAs power MESFETS, nonlinear simulation 86−28347
GaAs power MESFETs, Au-based gate-sinking enhanced by inhomogeneities 87−25275
GaAs power MESFETs, mobility profiling by magnetotransconductance meas. 87−45956
GaAs power MESFETs reliability for CS-3 communications satellite 88−38749
GaAs power MESFETs, reliability of gate metallisation 85−6966
GaAs power MESFETs, surface induced degradation mechanisms 87−25347
GaAs power MESFETs, surface-induced degradation, reliable soln. 85−23773

power transistors continued

conventional and high rating power lines, technical charact. and efficiency comparison *(Russian)* 88−10857
corona from surges on HV transmission lines, mathematical-physical model 86−44969
corona loss meas. on loaded operating DC lines 88−61895
corona losses on single and bundle conductors for overvoltage analysis 86−25590
corona modelling for transients calc. 86−65703
corona test facilities at Akagi 1000 kV Project 86−51001
corona tests, AC and DC from electrodes, humidity influence 86−28547
corona-loss measurement for HV transmission lines under no-load *(Hungarian)* 85−43600
cross-talk attenuation and HF parameter meas. on 220 kV transmission time *(Russian)* 87−4421
current densities optimisation, energy content considerations *(Romanian)* 88−30368
current displacements caused by power system faults 86−44948
current distribs. calc. in buildings during lightning strokes *(German)* 86−56470
current meas. by lightguide Faraday rotation *(German)* 86−65705
current transformer for power transmission line meas., equivalent circuit and basic equations *(Russian)* 86−25664
DC bipolar coronating field, ion density, digital meas. 87−50803
DC power transmission line, 1500 kV, construction, Russia 88−48574
DC power transmission line charact. impedance anal. using reactive line parameters *(Russian)* 87−50754
DC power transmission with cryogenic superconducting generators, transformers circuit breakers and lines, cost anal. *(Russian)* 87−57613
DC transmission line model, for control system electromagnetic transients and operation anal. 85−43582
design of power transmission lines using reliability and statistical analysis 85−15560
design optimisation, computer program 85−4655
design using TL Design method for best fit of parameters 87−57641
differential protection of transmission lines with a charge-dependent method *(German)* 87−64156
digital direction comparison line protection, design and engineering 85−64976
digital distance relay mho elements using bit slicetechnology 86−18821
digital HV transmission line protection, new algorithm for computer aided fault analysis *(German)* 85−15661
digital impedance methods for transmission line protection, evaluation criteria 85−32161
digital impedance protection of power transmission lines using a spectral observer 88−54967
digital impedance relay measurements, accurate fault location estimates 85−65010
digital line differential protection based on symmetrical components *(German)* 87−30249
digital panel instruments with inbuilt transducers for power line measurement *(Japanese)* 86−6449
digital signal transmission on power line carrier channels 87−34334
digital simulation in power system automation *(Chinese)* 86−25468
diode rectifier series tap station for HVDC power lines 86−6874
directional relay protection, self-adjusting, for DC transmission lines *(Russian)* 85−38555
directional relay protection of transmission lines, sensitivity anal. *(Russian)* 85−48611
distance protection by spectral estimation using rectangular wave transforms 86−45010
distance protection relay for transmission lines 86−65750
distance protection scheme for short transmission lines using microprocessor-based system 88−55066
distance protection using the new QUADRAMHO method 87−4339
distance protection using zero-sequence reactance relay with microprocessor 88−10918
distance relay design for transmission and distribution lines 85−64998
distribution line carrier communication system for power system control and monitoring 86−65702
distribution line carrier propagation anal. using bus impedance matrix 88−21903
distribution line carrier sensitivity analysis using bus impedance matrix 88−21904
distribution line carrier system for section switchtelecontrol 86−64605
distribution line communication system, adaptive noise cancellation for signal detection in harmonic noise 86−37696
distribution lines energy saving by efficient utilisation of Al *(Rumanian)* 86−25572
distribution networks, unilaterally supplied power line optimisation, theoretical *(Polish)* 85−32152
distribution power line carrier problems and solutions 86−59758
disturbance effects on microprocessor based equipment, surge testing 87−21932
disturbance monitoring, computer graphics, develop. 87−21933
disturbance voltage meas., broadband network 88−75226
double cct. transmission lines, effective transmission of bulk power over short distances, anal. 87−30155

power transmission lines continued
double circuit with split-phase conductors, parameters determ. *(Russian)* 85−15629
duct lines, friction coefficient reduction, anal. and research *(Japanese)* 87−4429

preamplifiers
4 GHz linear iser for satellite TWT amplifier appl., design, MIC construction and performance 87−17357
7A29, fast passive integrator appl. 85−22988
100 MHz preamplifier for universal counters, design *(German)* 87−10693
5212 low-noise preamplifier for fibre optic receivers 86−46578
ACOL stochastic cooling systems, preamplifier characteristics 88−54297
AD524AD and AD624AD FET preamplifiers as low-noise monolithic instrumentation amplifiers at low temps. 85−49756
Adcom GFP-555 *(German)* 88−74194
AF, high-impedance, JFET noise meas. 86−787
AF AGC control and signal clipping amplifiers, IC design for portable military radio appl. 87−23965
AF preamplifier buffer circuit using variable gain op-amp config. 85−11037
AF stereo preamplifier, DIY project *(German)* 85−6179
all-digital preamplifier and equaliser, design. 88−29162
amateur VHF/UHF radio front-end design 85−63520
antinoise correction in receiver systems of optoelectronic devices 86−48274
biomedical multichannel preamplifier, low-cost, for physiological signals 87−50334
bipolar fibre-optic preamplifiers, optimum emitter aspect ratio 87−73337
bipolar monolithic amplifiers for gigabit optical repeater 85−594
brain waves of swimming carp in space, detect., monolithic preamplifier 86−44678
car radio single-chip audio preamplifier *(German)* 87−37020
cascaded preamplifier stage, noise performance 87−31730
CCD image sensor, basic principles *(Spanish)* 85−26223
charge sensitive preamplifier on high resistivity Si 88−61180
charge-sensitive preamplifier with drain feedback for X-ray spectrometer 87−71036
chopper-stabilised operational amplifier appls. *(German)* 86−57669
CMOS preamplifier for electret microphone appl., design and operation 86−57694
combination loudspeaker amplifier *(Spanish)* 88−25028
common-collector full-monolithic preamplifier for 560 Mbit/s optical transmission 86−29015
cooled preamplifier for Ge-Cu IR photocond. detector *(French)* 85−54707
Denon and Yamaha pre/power amplifiers on test *(German)* 88−22366
detector-video amplifier with RF preamplification, max. sensitivity and optimum gain determ. 86−40969
detectors and associated electronics oriented to calorimetry 85−43169
digital preamp./equalizer for CD signals *(German)* 87−17238
digital stereo preamplifier *(Spanish)* 85−63891
distributed amplifier for 100-kHz-22-GHz instrumentation photoreceiver using p-i-n photodiode 88−71125
drift chamber preamplifier design 86−50417
dynamic pre-amplifier 85−20410
electretic microphone, hybrid system of preamplifier, construction and parameters *(Polish)* 87−41270
equalized RIAA stereo preamplifier, design and construction *(Spanish)* 86−46596
gain calculation method for preamps use in spectrum analysers 88−12231
Gbit/s tuned optical receivers, noise performance 87−49030
gigahertz FET transimpedance amplifiers for fibre-optic systems, noise optimum and optical sensitivity 88−18940
gravitational research appl., low-noise, low-input conductance design 86−27092
guitar preamplifier, cct. 85−11034
Hafler pre/power amplifier *(German)* 88−22367
Hall probe preamplifier, low-noise 86−65186
Harman-Kardon equipment, review *(German)* 86−760
heart vibrations recording, evaluation of specific pick-ups and preamplifiers 85−9127
HEMT low-noise amplifier for Ka-band, design and charact. *(Japanese)* 87−73793
Hi-Fi, feeder for output stage *(German)* 86−20324
Hi-Fi, preamplifier, cct. design with tone controls 85−44892
high-sensitivity output amplifier for CCD image sensor 88−42166
home-built receive convertor construction and layout 87−55954
hybrid preamplifiers and optoelectronic links for semiconductor counters 85−9102
ICOM 70 cm transceiver/preamp. unit 88−21963
Icom IC25 boom microphone preamp. design 88−41564
IEC-bus-controlled preamplifier *(German)* 87−70520
IF and video preamplifiers *(German)* 88−32018
IF video preamplifiers *(German)* 88−29064
JFETs, optimised, as front-ends in fibre-optic receiver preamplifiers, noise performance 88−33261
K-band (30 GHz) image rejection mixer 88−50352
Kashima 26 m antenna, front end charact. *(Japanese)* 86−30932
Klimo Merlin valve amplifier *(German)* 88−74196
large detector capacitances, transformer ratio for low noise preamplifiers 87−63683
LF cct. for Dicke radiometer, two-channel structure 85−14739
LF preamplifiers, configs., parameters and stabilisation *(German)* 85−6178
LF preamplifiers, low-signal amplifiers *(Russian)* 85−588
LF studio amp. design *(German)* 87−16889
LM series audio preamp. ICs from National Semiconductor 85−28382
lock-in amplifiers measure small AC signals 86−57679
low noise preamp. for OSCAR 10 85−58298
low noise preamplifier, single electron detection/position determ. 88−61189
low noise wideband instrumentation amp 86−8004
low noise wideband UHF video preamp., construction details 85−609
low-noise, for low-temp. pulsed NMR expts. 86−786
low-noise, temperature-stabilised, using FETs 85−11049
low-noise 144 MHz pre-amplifier using helical tuned circuits 88−25034
low-noise 2-4 GHz preamplifier 85−20851
low-noise preamplifier design for NMR 87−31732
low-noise preamplifier for low-impedance signal sources 86−17911
low-noise preamplifier for weather satellite reception at 1.7 GHz 85−11024
low-noise VHF pre-amplifier 86−46577
Luxman CL-360 and MQ-360 valve amplifiers *(German)* 88−47368
masthead pre-amplifier for 144MHz 87−37029
MAT-04, monolithic quad-transistor IC for diverse matching appls. 86−40913
medical instrument preamplifier, design using operational amplifiers *(French)* 85−49768
MESFET detector/preamplifier, 3 GHz bandwidth, monolithic integration for optical receiver appl. 87−34630
microphone mixer, preamplifier for 4 microphones *(German)* 87−28862
microphone preamplifier, cct. design using adjustable negative feedback *(Spanish)* 85−44907
microphone preamplifier cct. 85−42780
microphone system for extremely low sound levels 85−37336
microwave, ESR spectrometer appl. 86−18089
microwave low-noise amplifier performance, matching technique 86−53028
mixer-preamplifier MIC modules combination in miniature microwave flatpack 86−848
monolithic bipolar IC type for portable tape recorder with single 1.5 V dry battery operation *(Japanese)* 86−55495
monolithic variable transimpedance preamplifier for use in widedynamic range optical receivers 86−47773
monolithically integrated pin photodetector-FET receiver technology, reviews 88−4002
MOSFET IC buffer preamplifiers for linear pyroelectric detector arrays 88−29401
moving coil preamp. for analog record players *(German)* 87−49396
MSD 2 microstrip detector, current sensitive preamplifier 85−9101
neural signal recording and anal. from many neurons simultaneously, using multichannel silicon-based microelectrodes 88−36487
NMOS PtSi Schottky barrier MOS IR image sensor appl. 88−53739
NMOS transresistance amplifiers for fibre optics appls. 85−28398
noise behaviour 86−27114
noise sources analysis, for X-ray spectrometer 88−4857
nonlinear high-power amplifier for shaping magnetising current pulses 86−861
Nordmende Spectra-Video-Vision VHS 9.460A domestic video recorder ccts. *(Spanish)* 85−52553
optical mixer-preamplifier combination for 1.3 μm lightwave subcarrier systems 88−28832
optical preamplifier, monolithic common-collector, development 85−39935
optical signal preamplifiers, comparison with receivers for transmission *(German)* 86−23882
oscilloscope preamplifier, operational amplifiers and video amplifiers 88−63531
p-i-n bipolar transimpedance preamplifiers for optical receivers, design 85−37075
p-i-n FET receivers, optimisation of optical sensitivity 88−60147
p-i-n photodetector package, fibre-coupled, hermetic for use in fibre-optic preamplifier circuit 86−31434
PCB-integrated coaxial tuned circuit, design 86−27115
PET, ultralow noise charge sensitive preamplifier 87−41933
photomultiplier preamplifier-discriminator IC 87−41889
photoreceiver for fibre optic communication lines, noise charact. 86−63722
piezoelectric accelerometer signal processing *(Czech)* 87−56602
piezoelectric accelerometers, in seismology, low noise preamplifier with high input resist. 86−44777
PIN photodiode-bipolar transistor transimpedance optical preamplifier with very low input resist. 87−33070
PIN-FET hybrid integrated preamplifier for high speed optical transmission system 86−69795
pinFET receiver, wide bandwidth low noise, high-bit-rate optical preamplifier appls. 88−73905
power audio amplifier for digital preamplifier, high efficiency design 88−29156
preamp and YIG tuned oscillators cut ELINT noise 87−11044
probe preamplifier for use with selective microvoltmeter 87−56597
programmable amplifiers for computer communications systems 88−25024
programmable hearing aid using CMOSICs 88−74886
pulsed light feedback charge sensitive preamplifier, low noise *(Chinese)* 88−50041
pyroelectric detectors, optimised preamplifier design 86−20327
Quad preamplifier 44 and Celestian loudspeakers *(German)* 88−29167
RF, technology and appls. 88−25033
RF/microwave 88−50380
rural telephone systems, 1.5 GHz digital radio receiver front end 88−59982
SIT I/V charact. and noise performance for video freq. preamplifier cct. appl. 88−71611
SM-3V seismometer, recording channels amplifying devices 86−44778
spectrometers with semicond. detectors operation at elevated temp., noise and optimum filtering 85−20819
stereo preamplifier, design and construction, dummy head recording appl. 85−14546
stereo preamplifier for mag. cartridge, 747 op-amp based cct. design 85−11020
stereo preamplifier for magnetic pick-up, cct. design using dual op amp IC *(Spanish)* 85−44909
Tandberg 3018 preamplifier and TPA 3016 A power amplifier, review *(German)* 88−41907
TEGFET based baseband photoreceiver, sensitivity improvement with low-temp. operation 87−40877
thin-film MIC low-noise preamps, K-band, 18-40 GHz 86−14494
time variant preamplification for low current measurements 85−11045
top-of-the-range preamplifier cct., construction 87−37015
transformer-tuned front-ends, heterodyne optical receivers 87−70035
transimpedance input stage for current amplifiers, cct. design for IC implementation 85−22675
transimpedance optical preamplifier using a common base input stage 87−5696
transimpedance preamplifier with 70-dB AGC range in fine-line NMOS, optical receiver/repeater appls. 88−56475
TV, IF and video preamp. design *(German)* 88−25017

preamplifiers continued
TV camera preamplifier input noise suppression, using parallel connected active components *(Slovak)* 86−60028
ultra-low noise high impedance preamplifier design for IR cryogenic detector appl. 85−44894
ultra-low reflectivity 1.5 μm semiconductor laser preamplifier 88−47039
US hydrophone design involving integral preamplifier 86−70548
valve design with no overall feedback 85−44897
VCR, IR remote-control preamplifier and RF modulator, design *(Japanese)* 86−4872
VHF 18 to 28 MHz preamp. for amateur radio 87−527
VHF converter for short-wave receivers, cct. 85−14413
vibratory acceleration meas., low-noise preamplifier with compensation for cct. noise 86−11537
VLSI MOS dynamic RAM IC read amplifiers *(German)* 86−27311
voltage-sensitive differential input preamplifier with outstanding noise performances 88−25002
Walkman amplifier, design 86−46593
wideband amplifiers for Gbit/s optical link receiver *(Czech)* 86−55302
wideband low-noise preamplifier for ultrahigh-sensitivity fission counters 85−43285
wideband preamplifier, Gbit/s fibre optic, charactn. 87−49062
wideband preamplifiers, LE507 IC, three-stage bipolar config. for 1.2 and 40 MHz *(French)* 85−28406
X-ray spectrometer energy resolution improvement, using semiconductor detector with resistive feedback 86−60622
X-ray spectrometry, hybrid preamplifier, ultralow noise, low power 87−37024
AlGaAs/GaAs p-i-n photodiode/preamplifier monolithic photoreceiver integrated on semi-insulating GaAs 85−51069
BGO crystal scintillators, preamplifier-Si photodiode readout system 88−22960
GaASFET preamplifiers for 420 MHz, low-noise construction 85−54685
GaAs 18 to 40 GHz FET amplifier performance and applications 87−66519
GaAs 8 GHz low-noise FET preamplifier for InGaAs p-i-n photodiode optical receiver 87−40878
GaAs FET UHF preamplifier, design and construction *(Spanish)* 88−44072
GaAs FET VHF preamplifier evaluations 86−20313
GaAs FET, low temp. characteristics for UHF SQUID 88−33257
GaAs FET microwave preamplifiers, Varian E-109 EPR spectrometer sensitivity improvement 88−50385
GaAs FET optical front-end repeater cct., broadband up to 5.6 GHz 86−30785
GaAs FET preamplifier and mixer stage, low-noise METEOSAT converter design 85−50019
GaAs FET preamplifier for high speed receiver 86−49682
GaAs FET preamplifier/p-i-n diode photoreceiver, monolithically integrated, fast-response design 85−56457
GaAs MESFET optical preamplifier, 4 Gbit/s, optimum design 87−46729
GaAs MIC assembly for 12-GHz direct broadcast satellitereceiver 86−8475
GaAs MMIC direct-coupled preamplifiers and main amplifiers, design and performance 85−55140
GaAs MMIC preamplifier using airbridge micron/submicron gate FET technique 86−27599
GaAs cryogenic FET amplifier, use in NMR detection 86−34581
GaAs hybrid MESFET preamplifier for optical receiver operating at 8 Gbit/s 87−49060
GaAs monolithic IC, air-bridge gate FET for 86−8474
GaAs monolithic X-band low noise amplifier 86−67508
GaAs monolithic integrated optical preamplifier 87−46728
GaAs, monolithic integration of MSM photodiode and preamplifier 85−18819
GaAs, photoreceiver, high-speed, monolithic integration using metal-semiconductor-metal photodiodes 86−15588
GaInAs PIN-GaAs IC preamplifier receiver for high data rate optical fibre systems 87−38966
$In_{0.53}Ga_{0.47}As$ monolithically integrated receiver front-end, pin amplifier 88−33904
$In_{0.53}Ga_{0.47}As$ p-i-n amplifier struct. for monolithically integrated optical receiver front-end 88−73921
InGaAs/InP monolithic photoreceiver with single V power supply 88−45328
Si JFET preamplifier for SQUIDS *(German)* 88−20273
Si-CsI(Tl) photodiode multidetector system electronics 88−29917
precession, Earth *see Earth rotation*
precipitation (atmospheric) *see atmospheric precipitation*
precipitation ageing *see precipitation hardening*
precipitation annealing *see precipitation hardening*
precipitation, electrostatic *see electrostatic precipitators*
precipitation hardening
high-strength steel development and use *(Japanese)* 86−13829
steel, stainless, austenitic, superalloy A-286, GTA welded, for supercond. cable jackets, causes of undermatching props. 85−43619
Al-Fe, particle stabilised conductors, strength ductility, microstruct. 86−67514
Nd-Fe-B permanent magnet, microhardness, coercivity rel. to ageing and quenching 85−29465
$Nd_{15}Fe_{77}B_8$, ageing behaviour of intrinsic coercivity and microhardness 85−45953
Ti-V-Cr-Al (13,11,3 wt.%), cold working, ageing, ductility and strength 87−44395
Ti-V-Cr-Al (13,11,3 wt.%), fracture behaviour study with in-situ obs. of SEM and AE simultaneous meas. *(Japanese)* 87−44416
prediction theory *see filtering and prediction theory*
predictive control
AC synchronous servomotor, control method based on armature voltage prediction model 88−43173
arc furnace reactive power compensators, meas. system and predictive control 86−71151
brushless DC motor drives, adaptive current controller for PWM inverters 87−22826
DC motor speed control, model algorithmic or predictive heuristic method 86−66100
ground information optimal acquisition for dynamic analysis, autonomous control of image sensor 87−63882
high temperature solar receivers, process and control design, integrated approach 85−43899
Hungarian power system adaptive load-frequency control 85−38395
predictive control continued
hydroelectric power station reservoir water level prediction controller 86−45234
ice cool storage system packaging, performance and control 87−5104
line commutated DC drive 87−22406
maintenance programme for cost-cutting and quality improvement 87−31267
nuclear power plant, boiler temp. control using prediction techniques 85−65066
power distortion compensation system cycloconverter, prediction control 88−30899
power system fast stability test algorithm and stabilisation scheme 85−64939
power-system control, real-time constraint determ. *(Russian)* 87−71534
rotary drives, predictive current regulation *(German)* 88−37638
self commutated PWM inverters for speed controlled AC drive, predictive control strategy 88−69787
signal processing device appls. to controllers 85−61311
steam turbine starting based on predictive monitoring and control of thermal stresses 85−48872
thermal power plant with large load fluctuations, advanced predictive control system *(Japanese)* 87−78507
two-dimensional predictive coding system for videosignals *(Slovak)* 86−48757
velocity prediction algorithm for systems with discretized positional feedback 87−30681
viscoelastic testing process, adaptive controller design 88−37950
predictor-corrector methods
see also Runge-Kutta methods
acoustic holography, resolution improvement by aperture expansion 88−16976
air pollution models, variable stepsize variable formula methods 85−22427
CMOS latchup, steady-state charactn. via numerical device simulation 88−33382
constrained least-squares regularisation, predictor-corrector technique 87−65397
data compression with perfect reconstruction for high precision digital waveform recording 88−14700
differential equations, neutral functional variable-step variable-order algorithm 87−73015
error estimates for differential-algebraic equations 87−228
Euler modified integration in real-time simulation 88−63240
gas lubricated slider performance, effect of head/disc imperfections 86−35996
hyperbolic problems, third-order numerical schemes 88−18661
image motion analysis, forward-chaining rule-based deduction system 87−13167
induction heating systems, magneto-thermal coupled problem, finite element prediction correction scheme 86−40301
Loran-C marine predictive positioning corrected by area modelling 88−4137
nonequidistant modified predictor-corrector methodsfor solving systems of differential equations 86−363
numerical solution of reactive-diffusive systems 86−7723
object boundary representation by investigating neighbor quadrants in quadtree structure of image 86−37164
ODEs, A-stable bilateral approx. to integration *(Italian)* 86−7696
one-step multiderivative methods in PECE mode with appl. to stiff systems, stability regions 86−362
second derivative method using perfect square iteration matrices, stability properties 87−10346
second-order IVPs with periodic forcing fn., num. integration 87−10333
telecommunications services, demand forecasting method 87−76062
transcendental eqns.,binary iterative corrector process for complex root calc. 86−57370
unconstrained minimisation, predictor-corrector method 87−10303
variable reluctance machine's rotor position detection, predictor corrector estimator 88−69335
variable stepsize variable formula methods based onpredictor-corrector schemes 86−358
Volterra integral eqns., variable step-size predictor-corrector schemes 85−49529
S pollution over Europe, mathematical model 85−59506
preprocessors *see program processors*
presentation methods, radar *see radar displays*
presentation, technical *see technical presentation*
presintering *see sintering*
pressing, hot *see hot pressing*
pressure control
see also vacuum control
220 MW steam turbines, TVER electronic control system *(Czech)* 88−17257
1500 MW RBMK reactor drum separators, automatic level and pressure control *(Russian)* 86−61224
alarm switches for process plant survey, principles and products 85−47922
annealing system, O_2 fugacity meas. and control 85−5788
artificial heart, adaptive control system 86−12035
automated pressure regulator, PVT expts. appl. 85−3863
blood pressure control during haemodialysis, use of microprocessor-based interface 85−64547
blood pressure regulation by computer-controlled infusion ofvasodilators *(German)* 85−59316
blood pressure regulation during surgery using self tuning controller 87−29788
boiler combustion control, model reference adaptive algorithm 86−25883
boiler forced draft fan, retrofitted with adjustable frequency controller, for improved reliability and energy savings 85−16506
boiler implosion control in fossil fuel power plants 86−25882
boiler trim control for reduced fuel costs 88−23712
boilers, oil and liquified petroleum fired, variable pressure operation, computer control system *(Japanese)* 86−70806
bubble oxygenator, independ. control of blood gas PO_2 and PCO_2 88−61392
calibration systems for press. transducers, stable hydraulic press. generation 88−10166
centrifugal pump applications in petroleum and chemical industries 86−40336
ceramic differential pressure sensor, thick film approach *(German)* 86−11521
closed loop controller for anti-G suit, design and anal. 88−68527
Coal and oil-fired generating units control 87−22119

pressure control continued
coal-fired industrial boilers, automatic pressure regulation for stability during load following 87−57874
cogeneration plants, frequency and pressure regulator 86−70802
compressor energy savings from microprocessor-based floating-pressure set-point controls 86−13188
compressors, energy efficiency improvement using advanced control strategies *(Italian)* 87−64985
diesel engine, high-speed direct injection type, features 87−72534
diesel engine fuel injection pressure control, combustion behaviour effects 88−47553
diesel engines, direct injection, combined electronic/mech. fuel injection control 87−72532
differential pressure transmitter dynamic modelling 87−56707
district heating network control improvements by temp. and pressure control *(Finnish)* 88−23737
district heating steam turbines, efficiency improvement for converted turbines *(Russian)* 86−39520
electric/pneumatic pressure transducers/transmitters, survey *(German)* 85−42967
electronic sensing equipment techniques 86−38606
electropneumatic instrument for meas. and control of press. in cuffs of tracheal tubes 85−64537
errors of pressure setting mechanisms with noncylindrical piston 87−3795
gas pressure controllers, safety valves and flowmeters *(German)* 87−41634
gas-pressure regulating system design, microelectronics appl. *(Dutch)* 85−20446
heart preservation system prior to transplant, small thermoelec. refrigerator 88−42571
hydraulic turbine regulation quality improvement by waterhammer pressure compensation 87−4617
mean pressure meter and medical ventilator control appl. *(Italian)* 87−63295
oil filled transformers, pressure meas. for level and pressure control, signalling and protection *(Croatian)* 88−69456
optopneumatic convertor, high-sensitivity, fluidic control appls. 88−74441
parameter conversion for a variable pressure drop flowmeters 88−16559
patient computer-aided automated monitoring/treatment after open heart surgery, blood press. control *(Japanese)* 86−5974
photovoltaic water pumping system test facility, monitoring by data acquisition system 87−51104
piezoresistive pressure sensor, temp. dependence anal. *(Japanese)* 85−26320
portable total artificial heart driver, control and estimation techniques appl. 86−12036
power unit boiler, combustion control, appl. of model reference adaptive algorithm 86−6581
pressure-sintering machine, ECE-450 multiprocessor based control system *(German)* 87−64998
processor-controlled sheathing of electric conductors 87−50817
programmable placement pressure system for surface mounted devices 88−44476
proportional counter for $4\pi\beta$-γ coincidence counting *(Japanese)* 85−31717
pulmonary oedema treatment chamber temp. and pressure control improvements 87−63799
relief valves for nuclear power plants, testing at EDF *(French)* 85−27181
steam turbine control systems 86−61361
steam turbine governors for speed, pressure and flow control 85−65143
steam turbine testing, use of controllers 88−62201
supercritical pressure boilers with pressure reducing valves, for base load unit operation flexibility 85−38852
supersonic laser cavity flow control 86−48315
temperature and pressure switches for critical on/off control, buyer's guide 88−4353
thermionic converter using Cs vapour pressure, operating condition optimisation 86−33714
turbine generators electrical brushes, pressure control 85−16006
turbogenerator conversion to district heating role, specific fuel expenditure standardisation *(Russian)* 87−42764
two-wire sensor/transmitter package, BP16E, principle, advantages 86−55623
vapour pressure meas. and control, static method for temp. range below 1100K 86−24829
vessel safety testing, pressure and strain, control and monitoring *(German)* 88−122
viscoelastic testing process, adaptive controller design 88−37950
Zabrze heat and power station, boiler house water supply automation *(Polish)* 88−5508
Cr-Ni film resistor sputtering with automatic gas regulation *(German)* 88−71249
Hg for LPE of HgCdTe *(Chinese)* 88−18685
$Hg_{1-x}Cd_xTe$, slider LPE, Hg press. control attachment 88−24712
InP synthesis, high-pressure, with temp./pressure balancing program 85−50362
Si barometric resonant pressure sensor, miniature, characts. 88−74336

pressure measurement
see also vacuum measurement; vapour pressure measurement
2-D distributed pressure sensor using conductive rubber with LCD *(Japanese)* 85−42985
3D deep ground pressure gauge develop *(Japanese)* 88−16554
absolute pressure meas., secondary standards based on phase transitions 88−36271
AC bridge with capacitive pressure transducer, noise immunity 85−58680
accuracy analysis of pressure transmitters 87−77194
accuracy aspects of pressure testing, piston-operated manometers calibration *(Czech)* 88−22844
acoustic anemometer, improved design allowing for temperature effects *(Russian)* 85−64775
acoustic surface wave sensors for pressure, temp., force and acceleration *(Czech)* 87−70614
aerospace industry instrumentation, conf., Denver, CO, USA (May 1984) 85−39444
aerospace simulation facilities instrumentation, Conf., Williamsburg, VA, USA (June 1987) 87−65077
air data sensors for angle of attack, pitot and static pressure meas. 87−77773
air pressure, high stability digital meter 85−43129
air-deployed oceanographic mooring (AB1034) for current and thermohaline struct. 85−4474

pressure measurement continued
air-piston type dead weight gauge for pressure gauge standard *(Japanese)* 87−29353
air-pressure Cable Protection Analytical Maintenance System 86−17183
alarm switches for process plant survey, principles and products 85−47922
analog measurement devices using sensors and microcomputers 85−15061
annealing system, O_2 fugacity meas. and control 85−5788
arc discharges pressure variations obs., using broadband piezoelectric pressure sensor 86−17950
arterial blood press., indirect, long-term ambulatory monitoring 86−5883
arterial pulsatile flow and pressure using impedance plethysmography model 88−4876
audapas, press. transducer for process monitoring in rough industrial environment 88−16096
audapas measuring transducers and accessory devices for pressure meas. 88−9967
automated pressure scanning using tunable dye laser 85−35841
automated workstation for checking pressure gauges 88−15925
automatic cable pressure monitoring 86−4456
automatic electrical transducer for small press. difference meas. 85−52738
automatic leak test systems for the refrigerator industry *(German)* 87−51852
automatic pressure calibrator *(Japanese)* 88−74630
automatic pressure sensors checking and Soviet developments 88−29320
automatic system for pressure measurement in a blow-down wind tunnel 87−8968
automobile pressure transducers based on low-cost ceramic capacitors 87−72546
automotive tire pressure sensors, off-board and on-board designs 88−31170
BABMONITOR 2032 and diagnosis meas. for boiler combustion oscills. control 87−28923
balances, converging channel applied to piston-cylinder systems, theory 88−4695
beams, elastic, contact press. distrib., US wave meas. 85−52905
bearing lubricant debris monitor and sampler 87−22203
biomechanical gait analysis, portable device for press. distrib. meas. *(German)* 86−38734
biomechanics, tissue support interface pressure evaluator 88−54490
blood, electronic sphygmomanometer design and development 86−5882
blood, intra-arterial, in neonate, continuous meas., method and accuracy 86−60711
blood circulation system, morphological and functional meas. *(Japanese)* 86−5881
blood partial pressures of gases determ., in vitro meas., book contrib. 86−5886
blood partial pressures of gases determ., in vivo measurement book contrib. 86−5887
blood pressure, digital electronic monitors: evaluation, failure rates and accuracy 85−20887
blood pressure, direct meas., significance of reference 87−50211
blood pressure ambulatory monitoring with real time processing tools 88−61235
blood pressure and pulse monitor, Hitachi HME-20 device, assessment 85−37996
blood pressure meas. by auscultation, Korotkoff sounds 86−25209
blood pressure meas. technique for portable artificial heart drive system 87−42012
blood pressure measurement instrument ABM-II/A *(German)* 87−63726
blood pressure monitoring utilising ECG data in a microprocessor-based system 86−56090
blood pressure monitors, electronic digital, perceptions and ease of operation 86−50474
blood pressure sensor for fibrillation detect. method, implantable defibrillator output circuit evaluation *(Japanese)* 87−8952
body support interface, press. meas. systems, comparison 88−61238
Bourdon gauge absolute manometer 86−38364
BRAIN UNI Δ intelligent differential press. transmitter using capacitance as meas. principle *(Japanese)* 88−74389
building enclosures air leakage problems solution by combined thermography and pressure tests 88−4468
buildings air tightness meas., using optoelectronic device 85−4156
buoy pressure monitoring, using microcomputer-based system 86−60376
calibration and standards, German Calibration Service (DKD) *(German)* 88−36279
calibration of pressure balances *(Croatian)* 85−43125
calibration systems for press. transducers, stable hydraulic press. generation 88−10166
cam-cam follower testing machine, data acquisition, transmission and processing *(German)* 85−8749
capacitance diaphragm press. gauges, zero stability and calibration results 85−64122
capacitive ceramic pressure meas. transducer *(German)* 88−67744
capacitive pressure sensor technology 88−22549
car engine cylinder pressure sensor, design for knocking control system 87−29107
cavity mounted pressure sensing systems, frequency characteristics and input impedance *(Japanese)* 86−55637
cavity-mounted pressure sensing systems, transient response *(Japanese)* 86−65188
central blood pressure, noninvasive determ. by impedance plethysmography 86−65399
ceramic capacitive pressure sensor *(Dutch)* 88−67735
ceramic differential pressure sensor, thick film approach *(German)* 86−11521
chemical monolayer expt., computer-based control and meas. 88−22474
circuit breakers, optoelectronic transmission of arc quenching medium pressure measurement *(German)* 85−5269
combination probe for HF unsteady aerodynamic meas. 87−71217
combination probe for high-frequency unsteady aerodynamic meas. 88−47474
combustion bomb press. meas., effects of thermal loading 85−58938
combustion engines meas., state-of-the-art 86−18177
combustion pressure meas. in washer configuration, using fibre optic sensor 88−23470
commercial transducers, various types, for measuring temp., pressure and position, survey *(Danish)* 85−26476
compensation convertor from small pressure differences meas. *(German)* 87−41478
computer controlled fully automated calibration of pressure gauges *(German)* 87−77251

pressure measurement continued
condensers, leakage and impermeability tests using He gas *(German)* 85−9698
constant-density gas thermometer pressure meas. error sources and corrections 88−22842
corrosive media, pressure meter with membrane zero indicator 85−31624
cryogenic media, semiconductor strain transducers *(Russian)* 86−11552
cryogenic transonic wind tunnel, National Transonic Facility Mach number system 86−60867
data acquisition of pressure/level meas. with strain-gauges, chem. industry appl. *(German)* 87−14315
dead weight pressure calibration instruments, test procedure 87−49788
definitions and units *(French)* 88−53927
device for measuring pressure on electrodes of resistance welders *(Polish)* 88−16556
diabetics, press. monitoring under insensate feet 88−68346
diamond anvil cell, indirect press. meas. 85−31625
diamond anvil cell apparatus, using ruby fluorescence scale 87−49998
diesel engine cylinder gas temp meas. and heat release, thermocouple transducer *(Chinese)* 88−53913
diesel engine indicated pressure and heat release meas. data calc., error anal. 85−15076
diesel engine self-ignition delay determ., expt. 85−15051
differential pressure sensor, compensation method based on iterative microcomputer algorithm *(German)* 86−11567
differential pressure transducer, high-frequency fluctuations in liquids meas. 85−37584
differential pressure transmitter dynamic modelling 87−56707
differential pressure/pressure transmitter using Si sensors 86−70103
digital measured value processing sensor for press. and temp. *(German)* 87−70548
digital pressure gauge for static and slowly varying pressure meas. 87−70855
digital pressure sensors 88−47473
digital pressure sensors, microprocessors appl. 88−29361
disposable blood pressure solid-state sensors 88−36428
distribution meas. device using laser light *(Japanese)* 88−53926
DPI 500 instrument from Druck Ltd. *(Dutch)* 87−34908
driver's watch, inner pressure rise meas. during saturation diving *(Japanese)* 86−38607
DSTJ3000 differential pressure/pressure transmitter for temp. and static pressure meas. *(Japanese)* 87−63375
dynamic fluid pressure sensor and meas. *(Japanese)* 87−29352
dynamic meas. in nuclear reactor models 85−48816
dynamic pressure meas. in wind tunnels, flow effects 88−36598
dynamic pressure transducer, using LED 86−17935
elastic diaphragm pressure gauge construction with linear Hall displacement transducers *(Rumanian)* 85−20579
electric/pneumatic pressure transducers/transmitters, survey *(German)* 85−42967
electrical pressure metering on piezoresistivebasis *(German)* 86−58646
electronic barometer with LCD graphics module *(German)* 86−50245
electronic sensing equipment techniques 86−38606
electropneumatic instrument for meas. and control of press. in cuffs of tracheal tubes 85−64537
engine cylinder pressure meas. and immediate signal anal. using AVL digital analyser 85−14622
error estimation of Soviet secondary standard, 10^{-3} to 10^{3} Pa range 85−64328
errors of pressure setting mechanisms with noncylindrical piston 87−3795
explosion proof pressure gauge selection and appl. *(Japanese)* 88−36108
explosive pulse-power generator diagnostic using optical fibre pins 85−37569
eye internal pressure meas., using electric sensors *(Slovak)* 87−35376
fibre optic and laser sensors, conf., San Diego, CA, USA (Aug. 1987) 88−37823
fibre optic catheter-tip sensor based on photoelastic effect 87−71086
fibre optic distributed pressure sensor 88−22620
fibre optic distributed pressure sensors for automation systems 88−16171
fibre optic interferometer for variable press. meas. 86−42290
fibre optic interferometric sensors for DC measurements 88−13882
fibre optic microbend sensor 88−60746
fibre optic optically excited micromechanical resonator pressure sensors 88−67876
fibre optic photoelastic press. sensor with fibre-loss compensation 87−38783
fibre optic pressure sensor, design, construction and testing 88−16169
fibre optic pressure sensor, using 20 mW laser and photovoltaic cell 88−36028
fibre optic pressure sensor based on Fabry-Perot etalon 88−36011
fibre optic pressure sensor based on piezoelectric crystal 88−67842
fibre optic pressure sensor using birefringence in side-hole fibre 88−16170
fibre optic pressure sensor using deformable lens 87−46511
fibre optic pressure sensor using white light interferometry 88−42131
fibre optic pressure sensor with fluorescence decay asinformation carrier 86−2789
fibre optic pressure sensor with side-hole fibre 88−36024
fibre optic pressure sensors using Si micromachining 87−14318
fibre optic sensor, based on resonating mechanical structures 88−36026
fibre optic sensor, extrinsic using partially reflecting mirror 86−36205
fibre optic sensor, sensitivity dependence on fibre characts. and sensor element construction 85−18714
fibre optic sensor, using reflecting Fabry-Perot etalon 88−36023
fibre optic sensor for temp. and press. meas. using polarisation-maintaining single-mode fibre *(Japanese)* 86−31413
fibre optic sensor principles and applic. to process instrumentation and control 86−44271
fibre optic sensors, automobile appls., operation and design techniques *(Japanese)* 87−68057
fibre optic sensors, conf., The Hague, Netherlands (April 1987) 88−31272
fibre optic sensors, conference, New Orleans, Louisiana, USA (Jan. 1988) 88−62895
fibre optic sensors, development, configs., and appls., review 87−18626
fibre optic sensors, developments and appls., review *(Italian)* 87−46458
fibre optic sensors, heterodyne technology 88−67824
fibre optic sensors, markets 85−62362
fibre optic sensors, overview 85−24279
fibre optic sensors, single-mode fibre for temp. and pressure simultaneous meas. 88−67879
fibre optic sensors and their appls., conf., Cannes, France (Nov. 1985) 87−22970
pressure measurement continued
fibre optic sensors appl., development trends 86−2807
fibre optic sensors for chem. industry, industrial meas. of press., temp., and level 87−32949
fibre optic sensors for internal combustion engine monitoring 88−16173
fibre optic sensors for medical appls. 86−38775
fibre optic sensors for temp., vibration and pressure meas. *(German)* 87−8615
fibre optic sensors using D shaped mode fibre 88−33685
fibre optics in adverse environments, conf., San Diego, CA, USA (Aug. 1984) 85−32880
fibre-optic differential pressure sensor 87−25977
fibre-optic pressure sensor, high-resolution photoelastic using low-birefringence fibre 86−36121
fibre-optic sensors using differential heterodyne method 85−62374
fibre-optic transducers of physical field parameters, construction and classification 85−2026
finger cuff blood pressure monitoring device 86−56089
firearms, use of Maxwell body in gas pressure measurement by means of crusher 87−77448
flexible capacitor sensor designs on multi-projectchips 86−11587
flue gas analysis computer for all measurements *(German)* 88−29219
fluid pressure measurement using bubbles insonified by two frequencies 87−15117
fluorescent lamps, gas fill determ., partial pressure determ. *(Russian)* 88−11482
fontanelle pressure monitoring in infants with Rotterdam Teletransducer, reliable technique 88−29964
foot pressure sensor for use in lower extremityneuroprosthetic development 86−25188
foot-ground reaction forces and centre of foot press. during gait, miniature load cells for meas. 86−38740
FP101, one-gauge silicon press. sensor *(Japanese)* 88−74391
Francis-type pump turbine, unstable S-shape charact. meas. using laser velocimetry 87−57714
Fuji Electric semiconductor pressure sensors for high pressure appls. 88−74332
fused quartz Bourdon tube press. transducers, design 88−10165
gages, how they work and review of product 85−58722
gas flow velocity and pressure fields, meas. using laser-induced fluorescence 88−29694
gas pressure change detectors using windowless thermopiles, comments with reply 86−5310
gas pressure meas. up to 5 MPa, using piston gauges 88−10162
gas pressure measurement by laser interferometry, analysis 88−47714
gauge pressures generation using twin pressure balances 87−56897
gauges and sensors for pressure meas. *(German)* 86−38357
green sheet permeability measurement for process control to improve screening yields 85−60789
haemodynamic monitoring, from catheter to display 88−36414
heart chamber pressure and volume meas. *(Dutch)* 88−16669
Hewlett Packard monitor analog press. input adapter 88−54469
high pressure gauge, secondary standard, using AuCr spin-glass alloy 87−70858
high temperature pressure sensor for the combustion chamber of spark ignition engines 88−68079
high-pressure diamond chamber, for shear deformation effects on solids obs. 86−18103
high-pressure meas., thermal energy based apparatus 87−49999
high-pressure meas. system with computer-controlled data gathering 88−10163
high-pressure shock arrival time detector, using quartz fibre optic sensor 88−42129
high-pressure-meas. techniques and products *(French)* 88−29693
hot air tunnel for base bleed experimentation 86−38877
HV circuit breakers, meas. of pressure and displacement of arc-control devices 87−58233
HV oil-filled cable pressure monitoring and leak location system 85−59722
HV oil-filled cables, leak detection and location by microprocessor monitoring system 85−32166
hydraulic turbine runners, velocity and pressure distrib. meas. using Pitot combination probe 87−14614
hydroelectric power station dam stress meas. during staged start-up 87−9406
hydrostatic, hydrophone sensitivity meas. test equipment in 0 to MPa range 88−30190
hydrostatic and central venous pressure measurement bythe IVAC 560 infusion pump 86−32234
hydrostatic positive displacement pumps, pressure pulsation determination *(German)* 86−31650
hydrostatic pressure measurements with multimode optical fibers 87−70854
hydrostatic tank gauging, physical and computing principles 88−41962
hydrostatic tank gauging systems for liquid level meas. 88−47721
IC pressure sensor temp. compensation using programmable current source LM334 86−24460
implantable chronic pressure sensor 86−56129
inductive pressure transducer, two-terminal, mech. design 85−14790
industrial pressure meas., history 87−77456
infinite line pressure probe, turbine research appl. 86−17930
ingestible gastrointestinal pressure telemeter 88−61344
ink jet printers, pressure-wave generation in impulse ink-jet head 88−16100
instrument line systems, time domain design *(Japanese)* 86−17739
instrumentation and meas. principles, book 88−55888
instrumentation development application 87−77196
integrated optical pressure sensor, using GaAs/AlGaAs material 88−4420
integrated optics, fluid sensor, using heat transfer phenomenon 88−26865
integrated probe/sensor design for future distributed air data system applications 88−68561
intelligent transducers for processing techniques *(German)* 88−22530
intensity modulated optical fibre sensors employing graded index rod lenses 88−2027
interferometric fibre-optic hydrogen sensor 87−46486
international comparison, 20 to 100 MPa range 85−37794
intracranial press. meas. in the newborn, noninvasive sensor 88−42483
intracranial pressure monitor, noninvasive 85−38008
intracranial pressure signal anal., transducer evaluation 85−9132
intracranial pressure telemetric transducer, implantable, monitoring after cerebro-surgery operation *(Japanese)* 88−36421
intracranial pressure telemetry system using semicustom ICs 86−50468
lathe chuck jaw pressure *(Spanish)* 88−60957

pressure measurement continued
leak testing, automatic differential pressure method *(German)* 87−70856
LF meas. of leakage in enclosures 86−65299
lidar system for measuring atmospheric pressure and temperature profiles 88−23185
light bulb filaments as sensors of temp., pressure and gas flow velocity *(German)* 88−60677
limb veins, human, noninvasive meas. of press. plethysmography vol. characts. by elec. admittance 85−26778
linear actuator impact detection, fibre-optic arrival-time sensor with pressure transducer 85−62305
lingual pressure monitoring in vibrotactile research 85−20889
localized sound power method 86−38621
long-term accuracy, stress relaxation characts. expt. *(Japanese)* 87−70622
low pressure meas. for manometer calibration *(Croatian)* 85−52906
lungs volumetric and through-flow characts. determ., using pneumatic recording tachometer *(Slovak)* 88−29946
LVDT signal conditioner, signetics SE/NE5521 87−70523
magnetic suspension spinning rotor vacuum gauge, CXG-1 model *(Chinese)* 85−64327
magnetoinductive skin for robots 86−60246
marine sediment pore pressure measurement, piezometer probe technology 85−48461
market survey of pressure meas. equipment 85−47932
materials and instruments for press. meas., and calibration and transmitters 88−68074
maternal blood press. in hypertensive pregnancy, computerised home telemetry 88−10305
mean pressure meter and medical ventilator control appl. *(Italian)* 87−63295
medical catheter-tip transducers, PVF_2, for press., sound and flow meas. 85−15263
medical pressure telemetry capsule for cystometry 85−48267
MHD convertors, magnetoacoustic phenomena, anal. by solution of MHD dispersion relationship, experimental verification 85−16249
microbend fibre optic sensors, principle and appls. *(Slovak)* 87−8591
microcomputer-based measurement complex for hydrogenerator unit laboratory tests 87−78541
microelectronic press. transducers for process meas. systems *(German)* 86−65189
microelectronic sensors, classification and Czechoslovak developments *(Czech)* 86−24515
microelectronic sensors manufacture for temp., humidity, pressure and gas flow 87−56666
microprocessor based pressure standards from HUBER Instruments *(Slovak)* 88−36270
microprocessors and transducers, merging for advancing of pressure transmitters 87−3793
microtechnology spurs contrasting degrees of smart in process pressure instruments 85−43126
mining digital dilatometer *(Polish)* 87−41483
MPD thrusters for satellite propulsion, measurement of arc chamber pressure 85−31938
multimanometer based on US technique *(Chinese)* 86−44467
multimode fiber optic pressure sensor with extended range, industrial appls. 88−42127
multiple pressure measuring system, low-cost microprocessor based 87−28917
myocardial pressure meas., gated triggering device for NMR spectra processing 85−38157
NMR manometer, high pressures meas. at liquid He temp. 86−11768
nuclear power stations, diagnostic subsystems in Czechoslovakia *(Czech)* 87−15425
ocean pressure fluctuation gauge for use in deep-sea 87−71371
ocean surface helicopter-deployed buoy for meteorological meas. 88−48327
ocean surface meteorological meas. , using helicopter-deployed buoy 88−74969
oil and gas pipeline testing by passing of internal gauge under pressure 88−9912
oil filled transformers, pressure meas. for level and pressure control, signalling and protection *(Croatian)* 88−69456
oil filled type high pressure sensor using a silicondiaphragm 86−5294
optical fibre array pressure sensor, 2D 86−5296
optical fibre displacement sensor, studies 87−38767
optical fibre displacement sensor using a compensated fibre link 86−2788
optical fibre hydrophones and hydrophone arrays 88−7894
optical fibre microshell-tipped sensors for high-press. pulse detect. in adverse environments 85−35418
optical side-hole fibre for fibre-optic pressure sensing 86−48136
optical single-fibre interferometric pressure sensor, aperture stop influence on S/N ratio 87−25983
optical waveguide pressure sensor, metal-clad 87−54100
optically excited reson. press. sensor 88−53606
optically excited resonant sensors 88−4414
optimisation of dynamic press. meas. systems 87−49995
oscillatory signals from long instrument lines, pressure estimation 86−44468
OTEC cold water GFRP pipe field test 85−5017
paper industry, pressure measurement within a fibreboard duringpultrusion 87−3796
paper machine press nip pressure profile measurement 85−22028
parallel tube-manifold system for dynamic press. meas. optimisation 87−49996
parameter conversion for a variable pressure drop flowmeters 88−16559
partial pressure gauge using ion backscattering principle, for He and D_2 87−77451
partial pressure measurement *(Spanish)* 88−22841
patient monitoring system, press. distrib. meas. on plantar surface of diabetic feet 86−32236
patient-support interface, phys. parameters meas., sensor performance 86−32371
patient-support interface pressure meas. system 86−32372
PDA-2 pressure transducer for geophysics *(Russian)* 87−21762
pH-ISFET and an integrated pH-pressure sensor with back-side contacts 88−48093
photoelastic effects appl., hybrid fibre optic sensor 85−35397
photoelastic fibre optic sensor, force, pressure, acceleration and sound meas. *(German)* 87−8616
photoelastic pressure sensor, high-sensitivity 88−16164
physical measurement using monomode optical fibres 88−42069

pressure measurement continued
physical quantities meas. by variations in oscillator frequencies *(French)* 88−67991
piezo-optical transducers and appls., accelerometer test results 87−3576
piezoelectric accelerometers, technological developments for industrial appls. 86−5276
piezoelectric instruments props. and appls. *(German)* 85−64126
piezoelectric pressure meas., accurate absolute value determ. 88−68078
piezoelectric pressure measuring convertors, dynamic props. *(Polish)* 86−60235
piezoelectric sensors, temp.-pressure dependence 86−31365
piezoelectric thick film pressure sensors, for automotive appls., design, developments and stability *(Polish)* 85−5468
piezoelectric transducer for hydrostatic pressure change meas., oceanographic appl. 85−4457
piezoelectric transducers for press. and level meas. *(German)* 87−63357
piezoresistive effects for IC pressure sensors 86−31417
piezoresistive pressure sensor, temp. dependence anal. *(Japanese)* 85−26320
piezoresistive pressure sensors, characts. *(German)* 88−4382
piezoresistive pressure sensors band on semiconductors, design and accuracy *(German)* 87−56635
piezoresistive pressure transducers, mechanical design and technology integration 87−70634
piezoresistive transducer devices 86−28574
piezoresistors for stable pressure sensors 87−14316
piezoresonance pressure transducer with microprocessor data processing *(Russian)* 88−47487
pipeline leak detection using pressure wave system *(Japanese)* 86−17936
piston pressure gauge parameters optimisation 88−29321
piston pressure gauge range extension to low pressures 88−9950
piston-cylinder systems of pressure balances, elastic distortion calc. 86−70239
pitot tube for aircraft, Rosemount digital air data systems 87−50485
pneumatic intracranial pressure transducer, design and accuracy analysis 88−4882
polarimetric optical fibre pressure sensor with low temperature effects 88−7904
polarimetric strain and pressure sensors using temp. independ. polarisation maintaining optical fibre 86−2790
polarisation interferometer for precision pressure meas. 88−36272
poly(vinylidene fluoride) piezoelectric props., thermal response, thermal ageing and temp. dependence 86−52540
polyvinylidene fluoride piezoelec. film transducer, charge output stress depend., gauge accuracy 87−21065
polyvinylidene fluoride transducer, temp. compensated, for dynamic press. meas. 85−37610
portable continuous blood pressure monitor utilizing an M68705 microcomputer 87−21576
portable pressure indicator and calibrator for telemetering, microprocessor-based 88−60825
Position Location Reporting System development testing 88−74010
postoperative monitoring of conjunctival oxygen tension and temperature 88−48090
power plants, lifetime evaluation using computerised temperature and pressure meas. 85−43664
precision digital manometer, Model 2661, based on compound timing-fork pressure sensor *(Japanese)* 87−29189
precision semiconductor pressure convertors for absolute pressure measurement *(German)* 85−3952
pressure distribution between contact surfaces, measurement method *(Japanese)* 85−37795
pressure monitoring chair, for adaptive seating design 87−14843
pressure sensor using holographic shutter modulator and two-wavelength intensity referencing 85−62372
pressure/temperature sensors for use at low temp., based on tunnel diode oscillators 85−42988
principle devices for the measurement of pressure *(German)* 86−65298
probes, 3-D, for pressure meas., study and realisation using pressure-voltage transducers and DVM *(Italian)* 87−8613
process measurement techniques, light-pipe fibre optics appls. *(German)* 86−31338
process pressure meas., user's guide 87−77228
programmable medical data acquisition system chip , using BiMOS technology 88−74853
pump infusions, single- and multichannel, clinical study of press. distrib. *(German)* 85−59318
PWR power station monitoring, determination of temperature and pressure during inspection *(German)* 85−27162
quantum-ferroelectric pressure sensor for use at lowtemperatures 86−5240
quartz crystal vibrating piezoelectric sensors appl. *(Japanese)* 87−8621
radial-flow compressors, 'Super Martin' test rig development 86−55885
rarefied gas flow meas. system, automated 86−5582
remote micromovement of electrical contacts 88−12660
remote monitoring system from NNC, use for indication of temperature rises and pressure drops 87−3503
resistance pressure gauge with linear unbalanced DC bridge 86−65179
resonant diaphragm pressure sensor, pressure dependence obs. 86−55652
respiratory pressure data analysis for detecting breathing circuit faults in ventilated patients 87−29712
robot end-effectors, piezoelectric film sensor for tactile information detection 86−38373
roll spacing measurement method, pressure meas. technique for small gap determ. 85−20724
safety testing, pressure and strain, control and monitoring *(German)* 88−122
saline water distillation plants, small temp. and pressure differences meas. 87−14585
scanning, rotary and electronic techniques compared 88−42318
seat contact pressure distribution meas., microcomputerised system *(Spanish)* 86−5884
seating pressure evaluator, microprocessor-based, medical appl. 87−14844
semiconductor micropressure sensor, absolute press. meas. *(Japanese)* 88−74631
semiconductor pressure sensors, SIPSES code modelling 88−47467
semiconductor pressure sensors, with integrated signal processing, construction methods *(German)* 85−26289
semiconductor pressure sensors with integrated signal processing circuitry, VALVO KPZ 20 GE *(German)* 86−38319
semiconductor pressure sensors with integrated signal processing cct. *(German)* 85−31454

pressure measurement continued
semiconductor sensors 86−24500
semiconductor transducers for measurement of rapidly varying pressures 86−5295
semiconductor two-parameter transducer for high press. and temp. meas. 85−20615
sensor chips, use as pressure transducers 86−44297
sensor development, Japan update 88−60706
sensor develops. in Japan 88−47502
sensor for depth measurement, watch attachment *(Japanese)* 88−4376
sensor for easy interfacing to microelectronics, error compensated *(German)* 87−3598
sensor fusion, software and hardware methods 88−47501
sensor in elastic and plastic media 86−11560
sensor signal processing 85−37796
sensor using quartz SAW resonators 85−37559
sensor with noncylindrical piston, air compressibility effects calc. 86−24489
sensors, semiconductor types, integrated device developments *(German)* 85−64094
sensors for electrical control systems, requirements and appls. *(German)* 85−58656
sensors for hostile environments, for nuclear reactor appl. book contrib. 86−5255
sensors for pressure temperature and magnetism *(Dutch)* 85−20570
SHCH704 instrument transducer for slide wires and potentiometer pressure transducers *(Russian)* 86−17944
Si piezoresistive pressure transducers, operation principles and characteristics *(Italian)* 86−55605
silicon capacitive pressure sensors vie withpiezoresistive sensors 87−8771
silicon pressure sensors 87−70546
silicone pressure transducer with large range for harsh environments *(Danish)* 85−37579
single transverse Si voltage gauge type press. sensor *(Japanese)* 88−74390
SKODA steam turbines automation, for thermal and nuclear power plants *(Czech)* 85−60018
smart pressure transmitters, features 85−8811
smart pressure transmitters and silicon pressure sensors 86−38318
snap action switches, automatic testing and adjustment 86−5012
Solartron Transducers Series 3088 air pressure transducers 86−31336
solid electrolyte sensors based on ZrO_2 and ThO_2 for O_2 partial pressure meas. appl. *(German)* 87−8594
solids-laden flows, pressure meas. instrument 88−53928
SONIX digital secondary pressure standard, using vibrating cylinder transducer 86−5258
Southern Ukraine nuclear power station turbine and 1 GW generating unit efficiency tests 87−78285
spectrum analysers for non-steady-state operating conditions anal. of hydraulic machines *(Russian)* 86−31296
spin-glass materials for high-pressure sensors 87−56679
sputtered thin film strain gauge sensor for press. meas. in hazardous environments 88−10164
standard, 0.4-4.0 MPa, international intercomparison between NPL (India) and PTB (FRG) 88−74230
standard instruments for pressure meas. 87−77455
standardised pressure and temp. meas. automation at Electricite de France *(French)* 88−67673
standards, He melting curve appl. 85−64332
standards, international comparison in the pressure range 20-100 MPa 88−47715
state of the art in pressure sensing 85−43128
static, US method 86−31706
steam power plants, online monitoring and control systems, sensors and instrumentation 88−35776
steam turbine internal relative efficiency testing, accuracy of expt. values 87−64398
strain gauge sensors, laminated thin-film, design, appls. 88−9936
strain gauge technique *(German)* 86−44277
strain gauge transducers for nonelectric quantity meas. in electrotechnics and energetics 88−29341
strain gauges with Si SOS structure 87−8601
Subsonic Aerodynamic Research Laboratory, precision pressure meas. system development 87−71222
supersonic turbulent flow, simultaneous meas. of temp., density and pressure, laser appl. 86−38613
surface atmospheric pressure sensing by millimetric-wave radar 86−4733
surface pressure measurements on a transonic spinningprojectile 85−64658
survey of force and pressure meas. *(French)* 85−43107
Swedish fibre optic transducers, for temperature, acceleration and pressure, operating principles *(Swedish)* 85−20583
switches for temp. and pressure 87−3552
technologies used in pressure sensor design and appl. 85−43127
telecommunication cables, pressure management 86−49429
telemetering, single-loop data transmission and recording system 85−3910
test+transducer, conf., London, England (Oct. 1986) 88−36
thermocouple gauge, sensitivity extension to atmospheric pressure 88−74354
thermocouple vacuum gauge, for $5\text{-}10^{-3}$ torr range 86−70240
thermoelectric vacuum gauge, pressure meas. accuracy increase 87−77459
thermography appl. to motorised ski deck technology 88−4678
thick film pressure and force sensors, design, construction and charact. 88−4408
thick film pressure transducer, strain gauge type, design and charact. *(German)* 85−8794
thick film sensors, high pressure, principle 85−14789
thick film technology for new sensors *(German)* 86−17927
thin film capacitance transducers for press. pulsation meas. *(Russian)* 88−74363
thin film pressure and temp. sensors, RF sputtered *(Slovak)* 86−60230
thin film pressure sensor with a planar elasticelement *(German)* 86−24516
thin film pressure transmitter, modular design 86−5263
thin film strain strip pressure meas. unit *(German)* 87−56612
tilting pad thrust bearing, overload performance testing and eval. 86−33307
tonometric blood press. instrument, developmental status 85−43336
toxic gas flow during semicond. manufacturing processes, pressure monitoring system with alarm 86−57163
trace knock meas. in automobile engine, comparison with accelerometer knock sensor 88−67779
trailing cone assembly, calibration of NCAR Sabreliner research static pressure source 86−12072
transducer calculations by microcomputer 85−47970
pressure measurement continued
transmitter performance improvement, smart electronics appl. 86−5168
transmitters for fluid levels monitoring 87−56663
transonic flow, pressure meas. of airfoils using digital holographic interferometry 87−56905
tubing system for fluctuating press. meas. 87−49997
turbulent pressure fluctuations meas., using piezocrystal transducer 86−44475
twin-wire resistance probe manometer, effects of air pocket on performance 88−60958
twin-wire resistance-probe water manometer charact. 87−56662
two-wire sensor/transmitter package, BP16E, principle, advantages 86−55623
underground cables, pulling tensions, sidewall bearing pressures and friction factors 86−32774
underground mines measuring, monitoring and control instruments, use of electronics 85−43092
unsteady and steady pressure measurements, transonic speeds on an aerofoil, shock/boundary-layer interaction 87−3792
US sensor method *(Japanese)* 86−18178
V-CONE pressure differentials measurement system for flow measurement *(German)* 88−60962
variable pressure meas., errors due to vibratory acceleration reduction 87−3794
vascular pressure measurement with disposable dome transducer system, accuracy 86−50475
vehicle stability in crosswinds, meas. using pressure fluctuation 87−70859
ventilated neonates, online meas. of mech. parameters with rejection of unrepresentative cycles 86−50472
ventricular blood pressure meas. appl. of spline time varying digital filter 87−24366
voicing. aerodynamic aspects, glottal pulse skewing 86−16226
Vozdukh type sensors for checking biomedical instruments 88−36419
water filter differential pressure gauge indicator 86−24831
weather monitoring station, using CMOS microcomputer 86−50742
weather station with digital display, air pressure and temperature meas. circuits *(German)* 85−21013
wind tunnel, base bleed tests 87−71223
wind tunnel, National Transonic Facility 86−44735
wind tunnel meas., microprocessor-based system 87−71215
wire-cylinder electrostatic precipitator, pressure meas. in active electrical zone, probe technique 86−48538
AlGaAs semiconductor impulsive pressure sensor 87−41468
CeO_2 stoichiometry meas. using capacitance manometer system 88−68075
Cr-Ni film resistor sputtering with automatic gas regulation *(German)* 88−71249
GaAs transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
GaSb transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
Ge, polycrystalline semicond. thin films, piezoresistive element of press. sensors 88−29348
He-Ne laser, working mixture pressure and impurities determ., using additional probe 85−46445
^{3}He melting curve thermometer, automated, pressure meas. appl. 87−14591
Hg column pressure sensor for fast cond.-temp.-depth probes 88−42673
n-InSB, press.-dependent elec. resist., sensitive press. gauge appls. 85−20751
PZT ceramic-air composites for hydrostatic sensing 87−56668
SF_6 circuit-breaker rotating arc spectrum *(French)* 87−78832
SO_2 removal plant for coal-fired power stations, control technology study *(German)* 88−62157
Si barometric resonant pressure sensor, miniature, charact. 88−74336
Si based sensors, conf., London, England (Dec. 1986) 87−51744
Si capacitive pressure sensor, struct., fabrication and charact. *(Japanese)* 88−9962
Si micro-transducer for differential pressure 87−56686
Si, micromachined capacitive press. sensors *(French)* 88−35989
Si micromechanical sensors, struct., micromachining fabrication and appls. *(Italian)* 88−60678
Si miniature capacitive press. sensors, static response 87−70593
Si polycrystalline pressure sensors, fabrication and charact. 87−56683
Si, polycrystalline semicond. thin films, piezoresistive element of press. sensors 88−29348
Si pressure sensor, with analogue voltage and FM outputs *(Norwegian)* 85−37577
Si pressure sensors, design and temp. compensation cct. *(German)* 87−63353
Si pressure sensors for 2 kPa to 40 MPa range 85−20606
Si pressure sensors, signal errors induced by packaging strains 87−14317
Si semicond., dynamic quantity sensor 88−29346
Si transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
Si vibrating cylinder transducer for pressure meas. about 1 atm. 87−77458
Si:B diaphragm press. sensors fabricated by anodic oxidation etch-stop 88−29347
Si-based sensors, review *(German)* 87−35068
W lamp, temperature and pressure profiles, high-resolution CARS measurements 87−31063

pressure sintering *see sintering*

pressure transducers
3D deep ground pressure gauge develop *(Japanese)* 88−16554
accuracy analysis of pressure transmitters 87−77194
acousto-optical pressure transducer *(Russian)* 85−64132
adapter to Hewlett Packard pressure transducer for Spacelabs Model 414 single-channel portable patient monitor 86−5874
air data quality pressure transducer, Honeywell 86−11589
air data sensors for angle of attack, pitot and static pressure meas. 87−77773
air pressure, high stability digital meter 85−43129
air pressure-based sensors *(Italian)* 85−47928
all-passive fibre-optic sensors, operating principles 87−35038
arterial pressure contours, transducer system for noninvasive recording 86−25166
audapas, press. transducer for process monitoring in rough industrial environment 88−16096
audapas measuring transducers and accessory devices for pressure meas. 88−9967

pressure transducers continued
audapas press. measuring equipment prod., automated manufacturing section 88−11741
automatic electrical transducer for small press. difference meas. 85−52738
automobile engine control system using a cylinder pressure sensor 87−79177
automobile exhaust gas recirculating system with gauge pressure sensor and electronic feedback 87−72547
automobile pressure transducers based on low-cost ceramic capacitors 87−72546
automotive sensors fabrication technology 86−57006
avionics, transducer technologies 88−74928
bipolar monolithic integrated piezoresistive pressure transducer, biomedical appls. *(Chinese)* 86−17915
bleed-type pressure sensor, pressure, velocity and temp. sensitivities determ 87−70595
blood pressure, direct meas., significance of reference 87−50211
blood pressure, intra-arterial, in neonate, continuous meas., method and accuracy 86−60711
blood pressure transducers, disposable and reusable, zero stability obs. 88−29947
body support interface, press. meas. systems, comparison 88−61238
bonded foil strain gage pressure transducers 85−8793
bonded foil strain gauge pressure transducer 87−49728
bonded-foil strain gauge pressure transducer 88−35985
Bourdon gauge absolute manometer 86−38364
BRAIN UNI Δ intelligent differential press. transmitter using capacitance as meas. principle *(Japanese)* 88−74389
BT-cut pressure transducers, extended pressure and temperature operation 85−64144
CAD of pressure sensor structures, finite element modelling 88−35984
calculations by microcomputer 85−47970
calibration and performance of capacitance diaphragm gauges 87−70857
calibration systems for transducers, stable hydraulic press. generation 88−10166
calibration using laser active trimming 85−37608
canine gastric interdigestive complex obs. with pressure-sensitive radiotelemetering capsule 85−64534
capacitive, remote mounting, using sealed capillary tubing 85−37612
capacitive ceramic pressure meas. transducer *(German)* 88−67744
capacitive pressure sensor IC: anal., design and performance 86−44626
capacitive pressure sensor IC, micropower ccts. design for implantable device, biomedical appl. 87−21513
capacitive pressure sensor with FM output 86−55672
capacitive pressure sensors, suitability for industrial appls. *(German)* 87−63356
capacitive pressure transducer for biomedical appls., design 85−38017
capacitive pressure transducers, Cerabar models with overload protection *(German)* 88−74331
car engine cylinder pressure sensor, design for knocking control system 87−29107
cavity-mounted press. transducer, input press. effects on freq. charcts. 87−21058
cavity-mounted pressure sensing systems, transient response *(Japanese)* 86−65188
ceramic capacitive pressure sensor *(Dutch)* 88−67735
ceramic differential pressure sensor, thick film approach *(German)* 86−11521
ceramic membrane pressure sensor using thick-film technology, Transbar family *(German)* 85−64098
classification of resilient elements *(Russian)* 86−50067
closed-loop fluid power systems 88−29364
CMOS IC sensor interfaces, use of NMOS SC analogue ccts. 87−44629
CMOS integrated Si diaphragm pressure sensor 86−68002
CMOS Si pressure sensors, nonlinear analyses 86−50091
colour videotex images, hardcopy reproduction 88−72208
combustion bomb press. meas., effects of thermal loading 85−58938
combustion sensing using optical fibres 88−4411
compensation convertor from small pressure differences meas. *(German)* 87−41478
computer controlled fully automated calibration of pressure gauges *(German)* 87−77251
concentric-tube UHF FM pressure transducer 88−42674
conducting foam based design *(Spanish)* 87−8611
control/regulation system pressure transducers *(Russian)* 85−47958
correlation detection method for pressure transducer dynamic calibration 87−56680
cryogenic instrumentation of superconducting magnet testing stand 88−39848
cryogenic media, semiconductor strain transducers *(Russian)* 86−11552
cryogenic wind tunnel at ONERA/CERT, instrumentation and testing techniques 86−32435
crystal resonator type, charcts. of natural, swept natural cultured X- and Z-growth quartz material 86−42024
data reduction, using high-speed A/D convertor, turbomachine research appl. 86−31277
dedicated processing and control IC for pressuretelemetry 86−5303
deflection of circular diaphragms in pressure sensors, bending and tensile forces influence 85−37564
design notes for fluid power pressure transducers 86−55607
diaphragm, strain gauge based, grid geom. influence on output 87−35072
diaphragm pressure sensors, resonant, freq. charcts. *(Chinese)* 87−41463
diaphragm pressure sensors using diffused resistors *(Korean)* 87−3580
diaphragm-type, for use at low temp. 85−58690
differential pressure flowmeter transducer using ceramic material *(German)* 87−56634
differential pressure sensor, compensation method based on iterative microcomputer algorithm *(German)* 86−11567
differential pressure sensor fabrication, using piezoelectrically driven resonant ribbons 86−55656
differential pressure smart transmitter developments 86−24347
differential pressure transmitter, calibration, automatic aid 87−28934
differential pressure transmitter, microcomputer-based 86−5297
differential pressure transmitter dynamic modelling 87−56707
differential pressure/pressure transmitter using Si sensors 86−70103
differential type transducers for absolute press. meas. in vacua *(Italian)* 86−65166
digital interface for pressure sensor, Sensym *(German)* 86−70093
digital pressure sensors 88−47473
digital quartz pressure transducers for air data systems 86−11588
disposable blood pressure solid-state sensors 88−36428
pressure transducers continued
dynamic, using LED 86−17935
dynamic, using LED, model and expt. verification 86−54050
dynamic charcts., determ. methods 87−29052
dynamic fluid pressure sensor and meas. *(Japanese)* 87−29352
elastic diaphragm pressure gauge construction with linear Hall displacement transducers *(Rumanian)* 85−20579
electric/pneumatic types, survey *(German)* 85−42967
electrical pressure metering on piezoresistive basis *(German)* 87−3583
electrical signal output, press. temp. and mag. sensors *(Dutch)* 85−37565
electronic sensing equipment techniques 86−38606
electronic transducer modules with explosion-proof construction *(German)* 86−44257
Endress and Hauser pressure sensors *(Dutch)* 87−21019
ESSDERC 1985, conf., Aachen, FRG (Sept. 1985) 87−36319
explosion proof pressure gauge selection and appl. *(Japanese)* 88−36108
fiber optic interferometric pressure optrode, biomedical appl. 88−42128
fibre optic, shock wave studies appl. 88−22858
fibre optic catheter-tip sensor based on photoelastic effect 87−71086
fibre optic evanescent-wave coupling force transducer, using He-Ne laser 87−29085
fibre optic microbend sensor pressure transducers, high-temp calibration 88−16155
fibre optic pressure and temp. transducers, sensitivity estimate 85−2030
fibre optic pressure sensor, frequency-coded 87−1963
fibre optic pressure sensor, using 20 mW laser and photovoltaic cell 88−36028
fibre optic pressure sensor with side-hole fibre 88−36024
fibre optic pressure sensors, miniature, biomedical appls. 88−22629
fibre optic pressure transducer, high temp., design and charactn. 87−68085
fibre optic pressure transducer using wavelength modulation sensor 86−36207
fibre optic pressure transducers, microbending principle 87−41460
fibre optic sensor, based on resonating mechanical structures 88−36026
fibre optic sensor, use of photoelastic effects 85−35397
fibre optic sensor type, principle and charcts. *(Japanese)* 85−7259
fibre optic sensors *(Italian)* 87−53987
fibre optic sensors, overview 85−46167
fibre optic sensors for aircraft appls., performance 88−67883
fibre optic sensors for automobiles, modulation type, design and operation 86−52023
fibre optic sensors sensitive to normal pressure and shear stress 87−74781
fibre-linked interferometric pressure sensor 87−77255
fibre-optic hydroacoustic pressure sensor, spatial filtering of radiation 86−68264
fibre-optic pressure sensor on frustrated-total-internal-reflection principle, design and construction 86−22125
fibre-optic pressure transducer for use near NMR mag. fields 86−11960
fine differential pressure transmitter using newsemiconductor sensor *(Japanese)* 86−31370
flexible plastic membrane thick film pressure transducers 86−38356
flowmetering system with direct flanged differential pressure transducer, design *(German)* 87−29356
foot stress, discrete vertical in-shoe, meas. with piezoelec. transducers 88−68337
Fort Silicon Capacitance Absolute Pressure Sensor, thick-film hybrid laser trim 86−7280
FP101, one-gauge silicon press. sensor *(Japanese)* 88−74391
free-cylinder strain-gauge pressure transducer *(Polish)* 86−70119
Fuji Electric semiconductor pressure sensors for high pressure appls. 88−74332
fused quartz Bourdon tube press. transducers, design 88−10165
GaAlAs-GaAs integrated optical pressure sensor, fabrication 88−2047
gas pressure meas. up to 5 MPa, using piston gauges 88−10162
gasmeter calibration system, automatic 85−8689
gauge pressure smart transmitter tests in world-scale ethylene plant 86−24396
gauges and sensors for pressure meas. *(German)* 86−38357
haemostatic forceps, strain-gauged, for clinical and exptl. use 88−74857
hand contraction quality meas. device design 85−64542
high temperature pressure sensor for the combustion chamber of spark ignition engines 88−68079
high-intensity pressure transducers for control and monitoring appls. 86−5264
high-pressure-meas. techniques and products *(French)* 88−29693
homopolar energy storage machine diagnosis by fluidic transducer 86−40182
Honeywell piezoresistive pressure transducers, range and applications *(German)* 85−58693
hydraulic control appls. 88−9952
hydraulic system appls. 87−70563
IC capacitive pressure sensor for biomedical research 86−5891
IC microtransducer for air flow and differential pressure sensing 87−35062
IC pressure sensor with integral signal conditioning ccts., MPX2000 series 85−42960
impact testing, instrumented falling weight, obs. on PMMA 88−49916
implantable capacitive pressure transducer ICs for medical research 85−43334
implantable chronic pressure sensor 86−56129
inductive, two-terminal, mech. design 85−14790
inductive, with bellows sensing element 86−50070
industrial pressure meas., history 87−77456
instrumentation development application 87−77196
integrated circuit sensors, environmental concerns 87−14289
integrated pressure sensor with programmed amplification *(German)* 85−14787
integrated pressure sensors in acoustics 87−8587
integrated probe/sensor design for future distributed air data system applications 88−68561
integrated semiconductor sensors based on electrets 85−58663
integrated thermally excited resonant diaphragm pressuresensor 86−55653
intelligent pressure sensors for precision measurements, based on resonators *(German)* 88−60674
intelligent pressure sensors using semiconductors *(German)* 85−42961
intracranial pressure signal anal., transducer evaluation 85−9132
level meas. difficulties and transducer develop. *(Swedish)* 87−70862
linear actuator impact detection, fibre-optic arrival-time sensor with pressure transducer 85−62305
linear displacement meas., using duct sound press., sensor geometry effects on charcts. *(Japanese)* 88−68033

pressure transducers continued
linear pressure transducer, thermally stable, using rectifying metal-Si contact 85−14761
liquid volume measurement in tanks by hydrostatic pressure transducers 86−44476
liquid-filled, differential, high-frequency fluctuations in liquids meas. 85−37584
long-term accuracy, stress relaxation charact. expt. *(Japanese)* 87−70622
magnetoelastic force transducers, electrical parameters of sensitive elements *(Russian)* 87−21031
Manganin, high-pressure meas. system with computer-controlled data gathering 88−10163
Manganin gauges, calibrated against Hg melting line, metrological charact. 85−20616
Manganin wire, for 20 kbar, design 85−20617
marine sediment pore pressure measurement, piezometer probe technology 85−48461
market survey of pressure meas. equipment 85−47932
materials and instruments for press. meas., and calibration and transmitters 88−68074
medical catheter-tip transducers, PVF_2, for press., sound and flow meas. 85−15263
membrane keypad with pressure-sensitive crystal elements *(German)* 87−8620
membrane-type dynamic charact. *(Russian)* 88−4371
micro-miniaturization 88−53676
microcomputer-based system for online meas. of mech. parameters with rejection of unrepresentative cycles 86−50472
microdiaphragm pressure sensor, micromachining technology 87−49730
microelectronic press. transducers for process meas. systems *(German)* 86−65189
micromechanical thin-film cavity structures for low pressureand acoustic transducer applications 86−55670
micromechanics for pressure and vibration transducers, accelerometers and sensors *(Swedish)* 88−16063
micropower IC for a biomedical pressuretransducer 86−56128
microprocessor-controlled pressure transducers from Noris Tachometerwerk *(German)* 88−4356
microprocessors and transducers, merging for advancing of pressure transmitters 87−3793
microtechnology spurs contrasting degrees of smart in process pressure instruments 85−43126
microtransducer for air flow and differential pressure sensing appls. 86−55703
miniature pressure sensors and their temperature compensation 87−70602
monolithic piezoresistive silicon pressure sensors 86−55603
monolithic semiconductor Z *(German)* 85−47927
monolithically integrated transducer technology 86−55651
MOS integrated Si press. sensor 85−58664
MPX 2000 series of monolithic pressure sensors *(Spanish)* 88−4384
multimode frequency-coded optical-actuator pressure sensing 88−36042
multisensor piezoelectric polymer insole for pedobarography 85−15264
mutual capacitive normal- and shear-sensitive tactilesensor 85−52907
nearshore process meas., underwater digitisation and transmission system 88−54754
NEC semiconductor type pressure transducer, development *(Japanese)* 88−53657
ocean pressure fluctuation gauge for use in deep-sea 87−71371
oceanographic pressure-to-freq. transducers, linearising device *(Russian)* 86−50753
offshore platforms, differential pressure transducers *(Danish)* 87−72650
online pressure transducer calibrator in automatically recording data-logging systems, construction 86−17928
optical cable splice closure addressable moisture sensor converted from pressure transducer 87−49118
optical fibre gauges, calibration in 10 to 430 GPa press. range *(French)* 86−2794
optical fibre pressure sensor 88−22617
optical fibre probes, multistage, for detonation phenomena diagnostics 86−2795
optical fibre sensors appl., intensity- and phase-modulated devices 87−56673
optical sensors for digital system interfacing *(Danish)* 86−31431
optical tactile sensor using the CT reconstruction method *(Japanese)* 87−29101
optically excited resonant diaphragm pressure sensor 87−35033
optically excited resonant sensors 88−4414
optimisation of dynamic press. meas. systems 87−49995
parallel tube-manifold system for dynamic press. meas. optimisation 87−49996
patient monitoring system, press. distrib. meas. on plantar surface of diabetic feet 86−32236
patient monitoring systems input and sensor technology *(Japanese)* 86−5972
patient-support interface, phys. parameters meas., sensor performance 86−32371
patient-support interface pressure meas. system 86−32372
PDA-2 pressure transducer for geophysics *(Russian)* 87−21762
permittivity-proximity synthetic composite medium capacitive press. sensor, high sensitivity 85−8839
photoelastic pressure sensor, using low-birefringence fibre 87−29088
physiological pressure transducers, standard press. source for calibration 87−3930
piezo-resistive semicond. pressure sensors, noise meas. set-up, expt. study and low-noise amplifier *(German)* 87−63354
piezoelectric meas. transducers appl. *(German)* 85−26312
piezoelectric polymer pressure sensors for underwater shock wave pressure meas. 88−4387
piezoelectric pressure measuring convertors, dynamic props. *(Polish)* 86−60235
piezoelectric sensors, temp.-pressure dependence 86−31365
piezoelectric transducers for press. and level meas. *(German)* 87−63357
piezomagnetic combustion pressure transducer, temp. distrib. calc. using determ. method *(Polish)* 87−77264
piezoresistive, temp. dependence anal. *(Japanese)* 85−26320
piezoresistive effects for IC pressure sensors 86−31417
piezoresistive gauges: silicon makes the grade for pressure measurement *(French)* 88−53654
piezoresistive pressure monitor for continuous positive airway pressure systems 87−50377
piezoresistive pressure sensor, analogue and digital modelling 86−55668
pressure transducers continued
piezoresistive pressure sensor for chronic in-vivo use, fabrication technology 85−53100
piezoresistive pressure sensor with analogue signal processing unit *(German)* 86−38366
piezoresistive pressure sensors, charact. *(German)* 88−4382
piezoresistive pressure sensors band on semiconductors, design and accuracy *(German)* 87−56635
piezoresistive pressure sensors with internal gain equalisation *(German)* 85−64095
piezoresistive pressure transducers, mechanical design and technology integration 87−70634
piezoresistive pressure transducers using monocrystalline silicon *(French)* 85−42952
piezoresistive type, miniature designs and appls. *(German)* 85−8796
piezoresonance pressure transducer with microprocessor data processing *(Russian)* 88−47487
piezoresonance pressure transducers *(Russian)* 85−14779
piston pressure gauge parameters optimisation 88−29321
piston pressure gauge range extension to low pressures 88−9950
pitot tube for aircraft, Rosemount digital air data systems 87−50485
planar processed polysilicon sealed cavities for pressuretransducer arrays 85−50724
plastics processing, pressure sensing technology 87−77193
pneumatic intracranial pressure transducer, design and accuracy analysis 88−4882
polymers, ferroelec., transduction phenomena rel. to biomedical appls. 85−12448
polysilicon pressure transducers, microminiaturised, fabrication techniques 87−49729
polyvinylidene fluoride, pressure transducers, characterisation 86−55639
polyvinylidene fluoride piezoelec. film transducer, charge output stress depend., gauge accuracy 87−21065
polyvinylidene fluoride piezoelectric foils for measurement of arterial pressure pulse 87−71074
polyvinylidene fluoride transducer, hydrostatic piezoelec. const. meas. using press. pulses 85−24040
polyvinylidene fluoride transducer, temp. compensated, for dynamic press. meas. 85−37610
polyvinylidene fluoride transducer arrays for Braille cell appls. 87−57237
portable device for press. distrib. meas. used in biomechanical gait analysis *(German)* 86−38734
potentiometric sensors, pressure transducer *(Russian)* 85−37598
precision, double ended tuning fork resonators appl. 86−11577
precision force transducers using mechanicalresonators 86−60231
Pressductor, based on magneto-elastic effect, electronic scale appl. 85−37566
Pressductor transducer, technical features for industrial weighing 85−31439
pressure gauges based on a quartz oscillator controlled by a capacitive sensing element 88−74372
principle devices for the measurement of pressure *(German)* 86−65298
probes, 3-D, for pressure meas., study and realisation using pressure-voltage transducers and DVM *(Italian)* 87−8613
process pressure meas., user's guide 87−77228
process transmitters for corrosive and deep water environments 88−16099
PVDF broadband piezo-pressure probe for shock waves in water *(German)* 86−9347
quartz crystal micromechanical devices appl. 86−55657
quartz crystal pressure sensor using optical fibre and frustrated-total-internal-reflection readout technique 87−68101
quartz fluid density sensor pressure transducer, design and charact. 87−35069
quartz friction vacuum gauge, 0.001 to 1000 Torr operation 86−70114
quartz pressure pick-up for thermo-shock investig. in internal combustion engine *(German)* 87−41477
quartz pressure transducer in engine combustion chamber, temp. meas. 85−15067
quartz pressure transducers with reduced hysteresis, extended range and active temp. compensation 88−22581
quartz resonator press. transducers, theoretical modelling 88−22580
quartz tuning fork resonator transducers 87−21063
quartz type, accuracy evaluation and testing 86−24523
radioisotope pressure sensor, sensitivity estimation 88−29325
radiosonde pressure sensor performance: evaluation using tracking radars 87−77859
real-time electronic color blackboard for teleconferencing systems *(Japanese)* 85−26219
reliability and security enhancement by improved input testing *(German)* 85−26311
remote micromovement of electrical contacts 88−12660
remote monitoring of pressurized telecommunication cable network, pressure transducer and sensors 86−23641
resistance pressure gauge with linear unbalanced DC bridge 86−65179
resonance-free transducers with tourmaline pressure-sensitive element *(German)* 86−5200
resonant wire differential pressure sensor, plant condition monitoring by noise spectrum analysis 88−60980
rod-type elastic elements, sensor conversion fn. *(Russian)* 88−22544
rotary machines, liquid pressure instrumentation 87−21274
secondary high-pressure gauge, using AuCr spin-glass system 88−16068
self-supporting Manganin pressure gauge, hydrostatic pressure limit of n-pentane/iso-pentane mixture determ. 87−70581
semiconductor pressure sensors, with integrated signal processing, construction methods *(German)* 85−26289
semiconductor pressure sensors packaged in plastic 87−36491
semiconductor pressure sensors with integrated signal processing circuitry, VALVO KPZ 20 GE *(German)* 86−38319
semiconductor pressure sensors with integrated signal processing cct. *(German)* 85−31454
semiconductor pressure transducers for high temperature media *(Russian)* 87−29076
semiconductor sensitive èlements *(Russian)* 86−50069
semiconductor sensor pressure switches, cct. configs. and design aspects 88−12671
semiconductor sensors 86−24500
semiconductor sensors, differential pressure/pressure transmitters 86−5293
semiconductor sensors, suitability for mass-produced systems, charact. and appls. *(German)* 85−47915
semiconductor thin film pressure sensors with integrated signal conditioning, single package design *(German)* 85−52722

pressure transducers continued
semiconductor two-parameter transducer for high press. and temp. meas. 85−20615
sensor chips, use as pressure transducers 86−44297
sensor QA system accompanying production *(German)* 87−36522
sensor technologies and appls. 88−35987
sensor technology, overview 88−4381
sensor technology and appls., conf., Bad Nauheim, FRG (March 1986) *(German)* 87−9991
sensor with noncylindrical piston, air compressibility effects calc. 86−24489
sensors for controlling fuel-injection engine *(Spanish)* 88−42028
sensors with integrated signal processing, survey *(German)* 85−31453
SHCH704 instrument transducer for slide wires and potentiometer pressure transducers *(Russian)* 86−17944
Si piezoresistive pressure transducers, operation principles and characteristics *(Italian)* 86−55605
Si strain type, dynamic charact. meas. *(Russian)* 86−11553
Si VLSI solid-state sensors market 87−6802
Siemens IR, pressure and position sensors, review *(Dutch)* 85−20572
Siemens KPY pressure sensors, calibration at liquid He temps. 87−63349
silicon pressure sensors 87−70546
silicone pressure transducer with large range for harsh environments *(Danish)* 85−37579
single transverse Si voltage gauge type press. sensor *(Japanese)* 88−74390
smart pressure transducer 87−35032
SMART pressure transducers *(Dutch)* 88−42319
smart pressure transmitters, features 85−8811
smart pressure transmitters and silicon pressure sensors 86−38318
smart transmitters, appls. *(Japanese)* 87−35037
smart transmitters in distributed control: newperformance and benefits 87−8758
Smiths Industries development of flexible air data system 85−26855
Solartron Transducers Series 3088 air pressure transducers 86−31336
solid-state capacitive pressure transducers, review 87−41489
sonar array depth meas. technique 85−14375
spirometer system, pointer volume, for respiratory tests 87−50213
sputtered thin film strain gauge sensor for press. meas. in hazardous environments 88−10164
stability requirements, anal. *(German)* 87−49724
stand for testing liquid transducers at elevated hydrostatic pressures 88−42045
standard instruments for pressure meas. 87−77455
standard up to 500 MPa, using strain gauge 87−56655
state of the art in pressure sensing 85−43128
statistical process control for improved quality 88−24586
steel stator components, vibration control and testing using pressure transducers *(Russian)* 87−4662
strain gauge, hysteresis modelling 86−5215
strain gauge, use of Si microcrystalline piezoresistive thin films 86−47290
strain gauge pressure transducer, review 87−3605
strain gauge sensors, laminated thin-film, design, appls. 88−9936
strain gauge sensors with mechanical stress concentrator, nonlinearity determ. 88−35928
strain gauge type, product review 88−67737
strain gauges for pressure meas., fabrication problems solution 86−5280
surgical suture tension measuring method and device 88−74858
Swedish micromechanical engineering developments *(Swedish)* 87−68304
switch behaviour in response to dynamic pressure 87−77269
switches, state-of-the-art and future developments 85−17921
tactile sensing technology for robotics 85−58653
tactile sensor design and construction for workpiece recognition 88−36077
tactile sensor imaging techniques 86−38286
tactile-sensing transducers based on conductive rubberfor robot construction *(Russian)* 87−8583
technologies used in pressure sensor design and appl. 85−43127
Teletransducer, Rotterdam, fontanelle pressure monitoring in infants, reliable technique 88−29964
temperature and pressure switches for critical on/off control, buyer's guide 88−4353
temperature compensated with signal processing circuitry *(German)* 85−64096
temperature compensation cct. *(French)* 86−31346
temperature-compensated pressure sensor *(German)* 86−31352
thermostatic p-n junction based pressure transducer *(Russian)* 86−11554
thick film force (pressure) sensors fabrication 87−70606
thick film pressure and force sensors, design, construction and charact. 88−4408
thick film pressure sensor, integrated type with free supporting structs., fabrication and charact. 88−4409
thick film pressure transducer, strain gauge type, design and charact. *(German)* 85−8794
thick film sensors, high pressure, principle 85−14789
thick-film ceramic diaphragm pressure transducer 85−31445
thick-film technology, appls. 87−24635
thin diaphragm capacitive pressure sensor simulator 87−35058
thin film capacitance transducers for press. pulsation meas. *(Russian)* 88−74363
thin film integrated solid-state sensors, review 86−65176
thin film sensor for pressure transducers, fabrication and appl. *(German)* 85−64128
thin-film and fibre-optic sensor technology 88−4357
thin-foil strain gauges, new directions 87−3551
thin-membrane, two-sided semiconductor wafer alignment 88−32974
total pressure measurements in industrial environment, vacuum gauge developments 85−37793
touch panel for computer display entry, config. using pressure sensing technique 87−8667
touch-sensitive screen, three-coordinate system 87−3696
trace knock meas. in automobile engine, comparison with accelerometer knock sensor 88−67779
traction motor commutator brush pressure force magneto-elastic transducer *(Russian)* 88−48872
transfer devices for gauge and sensor protection *(German)* 88−16062
transmitter selection for pressure and temp. meas. 85−14758
transmitters, market survey 88−16048
transverse voltage type, sensitivity, geometric effect *(Chinese)* 87−70545
tubing system for fluctuating press. meas. 87−49997
tuning fork resonator transducers 87−41497
tunnel diode oscillators, use as high precision transducers, 0.02K to room temp. 85−42987
turbine engine research, use of infinite line pressure probe 86−17930
two-membrane fast capacitive pressure transducer for hot gas 85−20601
two-wire sensor/transmitter package, BP16E, principle, advantages 86−55623
types, conversion into elec. signal *(Spanish)* 87−63394
ultrasensitive pressure sensors, noise due to Brownian motion of diaphragm 87−49674
underwater explosion transducers, electrical isolation 88−4362
unsaturated fly ash landfill moisture content and pressure potential instrument evaluation 87−63920
uterine cervix dilation force measurement system 88−61218
vacuum, meas. and process control 87−77457
vacuum measurement, techniques and instruments, book 86−26537
variable capacitance press. transducers, vacuum appl., technological development, review 85−64121
variable-pressure sensors, four-mass method of examining vibrational frequency charact. 87−29051
vascular pressure measurement with disposable dome transducer system, accuracy 86−50475
Vozdukh type sensors for checking biomedical instruments 88−36419
wind tunnel, high-speed, seven-hole probes calibration 87−71221
wind-pressure meas. on full-scale structures, transducer development 87−41467
Yokogawa Electric differential-pressure intelligent sensor development *(Japanese)* 88−74345
Zeranin wire, for 20 kbar, design 85−20617
Al_2O_3 ceramic diaphragm differential-pressure transducer 87−35055
GaAs transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
GaSb transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
PZT ceramic-air composites for hydrostatic sensing 88−22524
Si barometric resonant pressure sensor, miniature, charact. 88−74336
Si cantilever appl., 1 to 1000 bar range appl. 87−56687
Si capacitive pressure sensor, struct., fabrication and charact. *(Japanese)* 88−9962
Si diaphragm capacitive pressure transducers, characteristics *(French)* 88−60695
Si diaphragm formation for pressure sensor, by anodic oxidation etch-stop 86−55690
Si diaphragm monolithic pressure sensor, KP100A, design, construction and appls. 85−20588
Si diaphragm pressure sensors, review 87−41498
Si diaphragm sensors 85−42971
Si dynamic sensors, charact., appls. *(Japanese)* 87−29058
Si floating-membrane thermal vacuum sensor for pressures 0.1 Pa to 100 kPa 88−60703
Si integrated pressure sensor using p-well CMOS process, design, fabrication and charact. 87−49671
Si intelligent pressure sensors with integrated signal evaluation *(German)* 88−53607
Si membranes appl. *(German)* 85−64129
Si micro-transducer for differential pressure 87−56686
Si, micromachined capacitive press. sensors *(French)* 88−35989
Si micromechanical optically excited resonant beam pressure sensor 88−16058
Si monolithic pressure-flow sensor 88−29314
Si monolithic sensor chips, modular accelerometer and pressure sensors design 88−35986
Si piezoelectric pressure sensors, monolithic type with cross-voltage temp. compensation, Motorola MPX-series *(German)* 85−64097
Si piezoresistive absolute press. sensors, packaging eval. 88−53930
Si piezoresistive absolute pressure sensor, design and realisation *(Slovenian)* 87−49669
Si piezoresistive and capacitive pressure sensors, transducer noise 88−67748
Si piezoresistive micro-diaphragm sensor, laser recrystallised 86−55671
Si piezoresistive pressure sensor for leak detection and robot control *(German)* 87−77250
Si piezoresistive pressure sensors *(French)* 85−14756
Si press. sensors, diaphragm thickness control using anodic oxidation etch-stop 88−7478
Si pressure sensor, CMOS integrated type, nonlinear anal. 87−63361
Si pressure sensor, batch-fabricated, scaling limits determ. 86−55669
Si pressure sensor diaphragm, displacement and slope analysis, holospeckle-shearing interferometry 87−21244
Si pressure sensor, four-terminal, analysis and design 86−55673
Si pressure sensor, four-terminal, at centre of diaphragm 87−70605
Si pressure sensor using MOS ring oscillator 86−5244
Si pressure sensor, with polycrystalline piezoresistors 86−55715
Si pressure sensors, batch-fabricated, scaling limits 87−49673
Si pressure sensors, design and temp. compensation cct. *(German)* 87−63353
Si pressure sensors for 2 kPa to 40 MPa range 85−20606
Si pressure sensors for automotive appls., temp. compensation 88−4410
Si, pressure sensors for range 2 kPa to 40 MPa 86−11564
Si pressure sensors for range 2-kPa to 40-MPa 86−24830
Si pressure sensors, monolithic IC type, temp. compensation ccts. *(German)* 88−22535
Si pressure transducers and accelerometers, configs. and charact. *(French)* 88−16057
Si semiconductor pressure sensors, temperature, dependence of nonlinear characteristics *(Japanese)* 86−11570
Si sensor technologies utilising IC processing 86−50088
Si sensor technology developments for pressure transmitters 87−56621
Si smart sensors from SI *(Norwegian)* 86−17921
Si tactile imager, capacitive cell based 85−20614
Si transducers for meas. of rapidly varying press. in fuel pumps of diesel engines 85−8840
Si vibrating cylinder transducer for pressure meas. about 1 atm. 87−77458
Si-Al optically excited diaphragms, reson. freq., temp. depend. 87−14270
Si-based sensors, deposition methods and appls. 87−29096
T compatibility of wet-wet differential press. transducer 85−64123
T pressure gauge for 10^{-3} to 10^{-5} torr, based on beta source 88−36273
W inert gas arc and electron beam welding of pressure transducers 87−63407
ZnO IC-processed piezoelectric microphone 88−1839
ZnO on Si_3N_4 diaphragm pressure sensor, micromachines device with IC process compatibility 87−49732

pressure vessels
acoustic membrane sensor for fault location in power equipment *(Czech)* 87−22100
ADINA and nonlinear FEA, conf. Cambridge, MA, USA, (June 1987) 87−51694
BIBLIS-B reactor pressure vessel, fracture mech. anal. for thermal shock transients 87−9295
boiler pressure vessels and piping systems, service induced damage 86−33086
BR-3 pressure vessel, low temp. annealing 85−59929
BWR, fill level control, ultrasonic technique *(German)* 87−77920
BWR pressure vessel life extension 87−71905
BWR vessel stub tubes, evaluation techniques for preventive repair 86−51364
cladded nozzle of reactor pressure vessel, thermal shock surface cracks, AE obs. 85−33541
concrete pressure vessel, prestressed, in-service meas. 86−31668
conference, pressure boundary safety of LWRs, Stuttgart, Germany (Oct. 1983) 85−39350
eddy current tests, ang. spectrum analysis applied to undercladding flaws and dipole probes 85−10872
ELXSIR cross-section library for LWR pressure vessel irradiation studies, part of LEPRICON computer code system 85−9680
embrittlement, ageing and repetitive loading effects, Charpy tests 88−42988
FBR pressure vessels, MIR system for visual and ultrasonic inspection during operation *(French)* 85−21358
gas filled thermostat assemblies, capsule sealing using laser welding equipment 88−49314
glass fibre reinforced plastic dewar with spherical bottom for SQUID-magnetoencephalography system, mech. performance 87−41965
high pressure vessel construction code, design criteria 87−79268
high-temperature component residual life estimation, technical and economic aspects 86−7579
HTR 500 550 MW high-temp. reactor, safety and operation 87−71789
in-service inspection, phased arrays appl. 85−43504
in-service inspection TV-manipulator for reactor pressure vessels 85−42778
LWR pressure vessel closure stud removal equipment 85−59964
LWR pressure vessel steel, radiation damage prediction and control, LEPRICON dosimetry methodology, database expansion 85−32327
LWR pressure vessels, deformation during LOCAs, interaction between fluid and structure, computer code 85−15794
LWR reinforced concrete containment model, 1/6 scale, design and construction aspects 87−71907
magnetic particle flaw inspection, applicability of BS.6072 85−10839
NDT, conf., Vancouver, BC, Canada (April 1987) 88−18335
NDT, imaging system utilising scanned acoustic holography 85−6091
nuclear materials testing and safety, conf., Stuttgart, Germany (Oct. 1986) 87−65038
nuclear plant pressure vessels, weld investigation 87−78388
nuclear plants, reactor vessels dosimetry *(Hungarian)* 87−64247
nuclear power plant piping and pressure vessel inspection by adapted medical ultrasonic imaging techniques 85−54173
nuclear power plant vessels, leak detection using 'sniffer' probe of He *(Chinese)* 86−38370
nuclear reactor, acoustic emission flaw charact. 85−10889
nuclear reactor pressure vessel and primary coolant system anchor studs, SCC detection method 85−10892
nuclear reactor vessel fluence reduction techniques, survey 85−9678
nuclear safety research, operating experience 85−43818
PIUS 'forgiving' PWR design with core overheat protection 86−25753
pneumatic tests of welded structures, multichannel time-interval meter 85−48110
Point Beach reactors, pressure vessel life extension, assessment and implementation 88−23679
pressure components, reliability and safety, conference, Stuttgart, Germany (Oct. 1984) 86−577
protective enclosures, safety standards and fault detection *(German)* 88−123
PWR core degradation analysis, CORMLT comp. code incorporating the effects of complex recirculation flow fields 85−32329
PWR power station monitoring, determination of temperature and pressure during inspection *(German)* 85−27162
PWR pressure vessel, large scale, HDR RPV-1 blowdown loads for test V32, computer aided calc. 85−4856
PWR pressure vessel, neutron energy spectra calcs., vessel integrity 85−38748
PWR pressure vessel flange, ultrasonic inspection of flaws in threaded-hole region 88−11033
PWR pressure vessel inlet nozzle welds, US inspection, signal processing method 86−66875
PWR pressure vessel weldments, US flaw detection, review of UKAEA trials 85−54566
PWR pressure vessel welds, underclad cracks detection, digital signal processing methods 85−2849
PWR pressure vessels, nondestructive examination using Mech Scan equipment 86−61284
PWR pressure vessels, radiation-induced embrittlement monitoring *(French)* 88−43013
PWR pressure vessels, US inspection validation 88−16978
PWR pressure vessels under time-depend. degradation, residual life assessment 88−43017
PWR vessel integrity, proposed quantitative nondestructive eval., reliability, Sizewell B Public Inquiry 85−5821
PWR vessel safety injection nozzle welds, ultrasonic flaw sizing 87−71884
PWR vessel welding seam, crack inspection *(German)* 86−46410
reactor pressure vessel, nozzle corner, thermal shock cracks, AE monitoring 86−66881
reactor pressure vessel, thermoplastic stress calcs. from stress-relief up to thermal shock 87−9293
reactor pressure vessel cladding, fatigue cracks, US inspection, computer imaging 86−66877
reactor pressure vessel head deformation anal. by holography 88−8330
reactor pressure vessel neutron dosimetry using solid-state track recorder 87−22090
reactor pressure vessels, thermal mixing and wall loads for emergency core cooling expts. 87−9294
reactor pressure vessels, ultrasonic apparatus developments for in-service inspection 87−71407
recertification analysis and inspection planning for environmental test facilities, NASA's program 85−26851

pressure vessels continued
safety assessment and NDT of in-service pressure vessel, Chinese code 88−18428
safety testing, pressure and strain, control and monitoring *(German)* 88−122
Shippingport Station Decommissioning Project, barge transportation of pressure vessel 87−57766
steel, high-temp. US parameters rel. to in-service inspection in nucl. power industry 85−17034
steel pressure vessel, flaw growth, AE source identification using long waveguide sensors 86−66882
steel welds in large vessels diagnostics, using pulse US waves 88−23220
structural failure prevention by AE monitoring computer system 88−70396
tube to tubesheet joint interfacing pressure, anal. and expts. 87−78383
ultrasound-flaw detection and crack depth determ. 86−579
VVER 440 reactor pressure vessel periodic inspection principles and equipment 86−61249
WWER, nonstationary processes in power plants, reactor safety and accident phenomena *(German)* 88−36987
WWER pressure vessel safety analyses by SKODA Plzen *(Czech)* 87−35749
WWER-440 type pressure vessel, manual and mechanized inspection *(German)* 87−35752
Cr-Ni-Mo steel metallurgy for VVER-1000 reactor manufacture 87−78346
Mn-Mo-Nb steel, B influence on stress relief cracking *(Chinese)* 86−11904
Mn-Mo-Ni steel forgings for reactor pressure vessels 85−39357
Ni-H_2 individual-pressure-vessel cell design and performance 86−33616

Li/$SOCl_2$ cells, anode limited cell reversal 85−27598
Li/$SOCl_2$ cells, chemical reactions, kinetics and thermodynamics 87−43340
Li/$SOCl_2$ cells, perform. of Li alloy/Li and Ca/Li anodes 86−13011
Li/$SOCl_2$ cells, reaction kinetics in $AlCl_3$ or $LiAlCl_4$ electrolytes 88−5822
Li/$SOCl_2$ cells, reaction products on current or potential reversal 85−21779
Li/$SOCl_2$ primary cells, free Lewis acid effects in electrolytes 88−49107
Li/$SOCl_2$ primary cells, implantable, elective replacement indicator 85−39183
Li/$SOCl_2$ small chemical current sources compared with other primary cells 87−43338
Li/$SOCl_2$-$LiAlCl_4$/C battery, effect of Ag, Cu and Pd and performance of C electrode 86−40039
Li/$SOCl_2$-SO_2Cl_2 cells, low temp. discharge behaviour 87−43341
Li-$(CF)_n$ batteries, open circuit voltage 87−4856
Li-$(CF)_n$ cells, improved discharge charact. at low temp. using mixed organic electrolytes 87−9705
Li-$(CF_x)_n$ battery connected to CMOS RAM, accelerated temp. testing, failure modes 86−19445
Li-$AgV_2O_{5.5}$ primary cells, rate capabilities for medical instrumentation appls. 88−17833
Li-AgV_2O_x cells, heat dissipation during storage and low-rate discharge 87−78863
Li-Bi_2O_3 button cells, experimental tests 86−45635
Li-CF battery state-of-charge meas. by chronopotentiometry 86−51878
Li-CF_x primary batteries, reliability 87−64773
Li-CuO 87−78861
Li-CuO cell, CuO cathode props. rel. to $Cu(OH)_2$ decomposition conditions 86−6972
Li-CuO organic electrolyte batteries, discharge charact. 86−45636
Li-CuO primary cells, discharge charact. improvement by CuO refinement and cathode addition 88−17836
Li-I batteries with metal dibenzo(b,i)(1,4,8,11)tetraaza(14)annulene-I charge transfer materials as cathodes 88−17829
Li-I_2 battery with supported film polymer cathodes 86−66253
Li-I_2 solid state batteries, performance of polyacrylonitrile-based cathodes 87−30896
Li-LiI-I_2(P2VP) primary cells, polarisation study of cathode and electrolyte 88−17834

primary cells continued
Li-$LiNO_3$ thermal battery cell discharge lifetime with soluble cathode materials 87−4858
Li-MnO_2 Kodak Ultralife nonrechargeable battery *(French)* 88−37358
Li-MnO_2 Long Life coin cells, service life meas. 87−72373
Li-MnO_2 batteries, communications and telecommunication appls. 86−19447
Li-MnO_2 cells, Duracell battery charact., operation and appls. 86−26254
Li-MnO_2 cells containing CF_x or C_2F in the cathode 87−58269
Li-MnO_2 cells, impedance anal. 87−72368
Li-MnO_2 primary cell with polymer electrolyte, electrochemical and thermomechanical properties study 88−17832
Li-MnO_{12} light weight, long storage capability, reliable power sources 87−78861
Li-Ni molten anode for thermal batteries 88−17862
Li-S battery, polysulphides in THF solution, oxidation/reduction mechanisms 88−62564
Li-SO_2 batteries, SDX *(German)* 85−65415
Li-SO_2 batteries, effect of water during incineration 87−22692
Li-SO_2 batteries, standby operations, transponder batteries 86−19446
Li-SO_2 batteries, start-up times at low temp. 87−72371
Li-SO_2 battery program for Galileo probe, historical overview 87−42145
Li-SO_2 cells, Duracell battery charact., operation and appls. 86−26254
Li-SO_2 cells, new electrolyte studies 88−5832
Li-SO_2 commercial cells, impedance meas. at various states of charge 87−30895
Li-SO_2 light weight, long storage capability, reliable power sources 87−78861
Li-SO_2 partially discharged primary cells for military appls. accelerated rate calorimetry studies 88−17830
Li-SO_2 primary cells, cell charging investig., chem. anal. and explosion study 88−17827
Li-SO_2 primary cells for military appls., advances in battery safety and technology 88−17831
Li-SO_2 primary cells, safety hazards during charging 87−22689
Li-SO_2 primary cells, thermal modelling work using computer simulation 88−17826
Li-SO_2Cl_2 D-size prototype prismatic cell, abuse testing, performance 88−17846
Li-SO_2Cl_2 cell battery pack fabrication, safety 87−22690
Li-$SOCL_2$ light weight, long storage capability, reliable power sources 87−78861
Li-$SOCl_2$ 100 V reserve battery develop. and discharge results 88−17839
Li-$SOCl_2$ D cells, high rate, Ketjenblack EC as cathode material, performance charact. 87−43343
Li-$SOCl_2$ F size cells, jellyroll construction, abuse testing 88−17855
Li-$SOCl_2$ active cell for Centaur-G deep-space appl. 87−42146
Li-$SOCl_2$ advanced high rate cells eval., design, performance and abuse testing 87−43344
Li-$SOCl_2$ batteries, military and industrial appls. 86−19448
Li-$SOCl_2$ batteries with high energy density for electronic devices *(Japanese)* 88−62566
Li-$SOCl_2$ battery as memory back-up power source, charact. 87−72367
Li-$SOCl_2$ battery design concepts for power appls., cathode performance 87−43342
Li-$SOCl_2$ battery develop. for CENTAUR vehicle 88−48292
Li-$SOCl_2$ cell anode surface layers, SO_2 and $LiAl(SO_3Cl)_4$ synergetic effect 88−75894
Li-$SOCl_2$ cell battery pack fabrication, safety 87−22690
Li-$SOCl_2$ cell performance after high temp. storage effect of cathode additives 88−17851
Li-$SOCl_2$ cells, Li/Li^+ couple in $LiAlCl_4$-$SOCl_2$ electrolyte, microelectrodes appl. 88−17853
Li-$SOCl_2$ cells, elemental S distribution, expt. study 86−66250
Li-$SOCl_2$ cells, energy release from cell components reactions 88−17850
Li-$SOCl_2$ cells, passivation of porous C cathodes 87−78862
Li-$SOCl_2$ cells with Ni powder electrodes 88−17849
Li-$SOCl_2$ electrochemical cells, thermal behaviour monitoring using liq. cryst. display 85−44151
Li-$SOCl_2$ high current batteries for military appls. performance, voltage delay, safety, construction 88−17858
Li-$SOCl_2$ high rate reserve battery, flowing electrolyte tests 88−17843
Li-$SOCl_2$ high-rate batteries, Underwriters' Laboratory safety tests 86−33587
Li-$SOCl_2$ high-rate bipolar cell development and engineering 86−40040
Li-$SOCl_2$ portable radio batteries for military appls., design, performance, safety 88−17857
Li-$SOCl_2$ primary cells, effect of Li impurities on battery perform 88−75895
Li-$SOCl_2$ primary cells, heat dissipation study 87−22691
Li-$SOCl_2$ primary cells, thermal modelling work using computer simulation 88−17826
Li-$SOCl_2$ primary cells, voltage delay alleviation using new inorganic additive 88−17848
Li-$SOCl_2$ primary cylindrical cells, high rate, thermal modeling 87−58268
Li-$SOCl_2$ prismatic primary cells, thermal resistances calc. 88−17854
Li-$SOCl_2$ reserve batteries, active spiral design for ultra high reliability 88−17840
Li-$SOCl_2$ reserve batteries for mine power sources, thick cathodes develop. 88−17842
Li-$SOCl_2$ reserve battery for projectile electronic fuzing 88−17838
Li-$SOCl_2$ reserve bipolar artillery battery, communications jamming appls. 88−17837
Li-$SOCl_2$ spacecraft battery, fault tree anal. for failure probability reduction 88−16849
Li-$SOCl_2$ spiral wound cells for military appls., safety and performance 88−17856
Li-SiO_2 battery system design for Galileo mission atmospheric entry probe 87−42144
Li-based batteries for longer life, charact. 85−60386
Li-based batteries, for tracking up CMOS systems 85−44144
Li-based polymer electrolyte batteries, behaviour at 80-100°C and at room temp. 85−39181
Li-cell battery backup for nonvolatile RAMs 86−57624
Li-molten nitrate cells, discharge charact. 86−45634
Li-oxyhalide battery systems, 3.6-3.9 V, use and appls. 86−26255
Li-polycarbonmonofluoride light weight, long storage capability, reliable power sources 87−78861
Li; CMOS RAM backup during line outages 88−50133

primary cells continued
LiAl/FeS_2 thermal batteries, computer thermal model using finite difference method 88−17915
LiAl/LiCl-KCl/FeS_2 thermal battery, comparison with LiAl/LiI(Al_2O_3)/FeS_2 system 88−17863
LiAl/LiI(Al_2O_3)/FeS_2 thermal battery, comparison with LiAl/LiCl-KCl/FeS_2 system 88−17863
LiAl-KClLiCl-TiO_2 primary cells, perform. testing and X-ray diffr. exam. of cathode during discharges 88−17901
Li$SOCl_2$ batteries for nonvolatile RAM, appl. 87−43345
Li$SOCl_2$ cells, $SOCl_2$ TAA catalysed reduction, rotating ring-disk electrodes 88−17852
Li(Si)/FeS_2 thin cell thermal battery, pellet production techniques 88−17864
Li_4SiO_4 solid electrolyte, polycrystalline, behaviour during AC/DC measurements, Li primary cells 85−60385
Li_4SiO_4-based solid electrolyte solutions, behaviour during AC/DC measurements, Li primary cells 85−60385
Mg primary cells, passive films on anodes 88−49108
Mg-CuCl seawater activated battery for oceanographic appls., electrochem. properties investig. *(Russian)* 88−23188
Mg-$CuSO_4$-Cu primary cells, discharge charact. study 88−75896
Mg-MnO_2 dry cell, AC impedance in absence of anode-film breakdown 88−69667
Mg-MnO_2 dry cells, electrochemical determ. of anode film resistance and double layer capacitance 85−53806
Mg-O_2 seawater activated battery for oceanographic appls., electrochem. properties investig. *(Russian)* 88−23188
Mn alkaline cell impedance correl. with high-rate pulse discharge capacity 87−51432
Mn alkaline cell impedance correl. with short-circuit current behaviour 87−51431
Mn alkaline cell impedance spectrum interpretation 87−51430
MnO_2 battery chemical, solid state and electrochem. props. 86−19444
MnO_2, chemical synthesis methods, battery appls., review 86−13010
MnO_2 discharge mechanism study using test cells 88−55582
MnO_2 electrodes for primary cells, voltage discharge charact. study 88−55581
MnO_2 in battery electrodes, cation vacancy model 85−32685
MnO_2, test automation using microcomputer-based test station *(Czech)* 87−15952
NiCd batteries, capacity testing, cct 86−6969
$(Pb_xBa_{1-x})TiO_3$, solid-state battery formation in solid solns. EMF and current meas. 88−37354
$(Pb_xSr_{1-x})TiO_3$, solid-state battery formation in solid solns. EMF and current meas. 88−37354
Zn/Ag_2O button cells, state-of-discharge determ. by galvanostatic meas. 85−53804
Zn/AgO_2 button cells, state-of-discharge determ. by impedance meas. 85−60384
Zn/air cells 87−51433
Zn-Ag_2O button cell state-of-discharge determ. by in-situ electrode impedance meas. 85−65416
Zn-Ag_2O primary batteries, construction performance and appls. 86−26256
Zn-AgO reserve-type batteries, quality anal., using capacitance and phase angle meas. 88−5824
Zn-HgO primary alkaline batteries, Grace DAKASEP separator, performance testing 88−17828
Zn-HgO primary batteries, construction performance and appls. 86−26256
Zn-MnO_2 Polapulse battery for Polaroid camera 87−78864
Zn-MnO_2 miniature batteries, historical development, electric charact. and advantages *(Polish)* 85−16201
Zn-NH_4Cl, corrosion, polarisation and impedance charact., methylcellulose-coated paper separators effect 88−11352
Zn-NH_4Cl, corrosion, polarisation and impedance charact., paper separators effect 88−11353
Zn-air batteries for electronic watches, operational time extension *(Czech)* 85−10078
Zn-air button type battery for hearing aids *(Japanese)* 87−35445
Zn-air cell, design, construction and charact. *(German)* 86−56936
Zn-air pollution free batteries, state of the art 85−16193
Zn-air primary batteries, construction performance and appls. 86−26256
Zn-alkaline-MnO_2 primary batteries, construction performance and appls. 86−26256
$ZnCl_2$-MnO_2 cell discharge reaction mechanism rel. to MnO_2 species *(Japanese)* 86−19442
$ZnCl_2$-MnO_2 primary cells, effect of NH_4^+ ion on heavy duty continuous discharge *(Japanese)* 85−39169
i/Nb_2O_5 cell employing polyethylene oxide lithium trifluoromethane sulphonate complex as electrolyte 87−51427

CAD/CAM system, CADEM personal computer based config. *(Italian)* 87−52986
CAD/CAM system for PCB processing, equipping, and testing *(German)* 87−66750
CAD/CAM systems for electronical design *(Spanish)* 85−39860
CAD/CAM with photo plot generation linked to CNC machines 86−35189
CAD/CAM/CAT, at Litton ACD plant, implementation 87−32166
CAD/CAM/CAT for printed circuit board 87−52968
CADEM CAD/CAM system for PCBs *(Italian)* 87−52987
Cadnetix PCB layout systems for end-to-end CAE 86−8572
CAE/CAD/CAM application, supply service to control system manufacturer *(German)* 86−1534
CAM for electronic circuit board fabrication 87−24592
CAM systems 87−37694
CAM systems, comparison and evaluation 88−1144
CAM systems using image processing/laser phototracing, Insight product range *(French)* 85−34307
camera, miniature, for robotic assembly and inspection of electronic equipment 87−77028
capacitor availability and lead time trends 85−55195
capillary wave soldering IC carriers on flexible substrate 86−20944
card assembly facility, hierarchical production scheduling scheme, performance study 85−16746
card total panel soldering, surface-mounted components 85−28816
cards, optimised manufacture using statistical quality control *(French)* 85−55281
cassette load/unload and disk handling operations, robot end effectors appl. 85−49340
cathode sputtering, modular arrangements and equipment configs. *(Polish)* 86−7829
causal models, probabilistic inference, deep knowledge in PCB manufacture 86−58178
CBDS software system for development of printedcircuit cards *(German)* 86−1481
ceramic mica-reinforced dimensionally stable laminates 87−17526
ceramic multilayer wiring boards, tape dielectric technology development 88−7212
Chad PCB assembly system 88−71191
chemical automation for the PWB shop 87−45430
chemical cleaning and microetching of CU 88−64099
chemical cleaning practices and processing 87−17525
chemical cleaning techniques 87−37727
chemically inert flux for flow soldering processes *(Swedish)* 88−25676
chemicals, electronic, for PCB manufacture 86−14662
chip carrier doubles pin count but keeps standard leadspacing 85−61549
chip component technology and mounting standards for automated assembly 86−7526
chip directly on board, TAB system *(Italian)* 88−57116
chip mounting machines, processing capacity and charact. 86−8581
chip mounting techniques and equipment for automated production 86−8609
chip-on-board encapsulant selection 86−1519
chip-on-board surface mount resin 86−62945
chip-on-board technology, alternative bonding methods 86−62943
chip-on-board technology for PCBs 86−14659
choosing an effective adhesive 87−59987
CIM environment for design, assembly, and test of printed wiring assemblies 88−50532
CIM factory, flexible, integration of assembly robot 88−57135
CIM in PCB assembly 88−71207
CIM in PCB industry 86−20924
CIM in PCB industry 86−27716
CIM systems, use of PCB manufacturing test cell in planning analysis and design simulation 88−32567
CIM systems appl. 87−17541
CIM technology appl. *(German)* 87−1076
CIM trends, growth 87−37731
CIM-test 2000 equipment for testing and adjustment *(German)* 87−32158
circuit boards production using protective film *(German)* 88−12779
circuit imaging by laser beam 85−61544
circuit layout software for automatic circuit generation *(Swedish)* 87−24561
circular chip components, on PCB, automatic installation system *(Japanese)* 85−55310
clean room technology 86−8622
clean rooms for fine line imaging 87−11179
cleaning, advanced systems 86−14704
cleaning, aqueous or solvent, comparison 87−45414
cleaning, controlling solvent losses 88−71209
cleaning, solvent solns., choice of defluxer 86−41419
cleaning, solvents, equipment, and accessories, specification guide 88−38900
cleaning, TI tests find best cleaner. II for mildly activated rosin flux 87−45406
cleaning agents and soldering fluxes, CFC alternatives 88−71204
cleaning alternatives to chlorofluorocarbon solvents 88−63031
cleaning equipment developments 86−1526
cleaning for high quality 86−20938
cleaning methods for printed cct. assemblies that include surface mounted components, investigation *(Swedish)* 86−41451
cleaning methods reexam. in light of new packaging techniques 85−22223
cleaning solutions and methods 87−11173
cleaning surface mounted PCB assemblies 88−12776
cleaning systems for surface mount 86−67588
cleaning techniques 85−1151
cleaning techniques after assembly of through-hole components 86−27724
cleanliness in PCB production, provision of dust-free environment *(Italian)* 88−57117
cleanliness is the key to quality thick and thin films 85−61595
cleanroom environments for fine-line boards 88−57107

etchback and desmearing processes and permanganate process trends 88−64105
etching from artwork printed in magazine 85−61577
etching solution regeneration in PCB manufacture, machine comparison *(Russian)* 88−32641
etching stabilized H_2O_2 and H_2SO_4 acid etchants 87−6265
etching technology overview 88−7195
etching with H_2O_2-H_2SO_4 soln. and ion exchange 87−11188
evaporation masks using organic materials for fine linerepair and solder evaporation 86−8598
excimer lasers , PWB appls. 88−71221
experimental matrix design for PCB process control 88−1132
expert system for PCB assembly planning 86−52243
Explorer 32-bit workstation, SMT methods in PWB fabrication 86−46075
expt. designs for QC improvement 88−7174
fabrication, processing high performance multilayer boards of fluoropolymer composite materials 87−59985
factors affecting additive/substractive cct fabrication 87−17506
factory automation in US 85−28791
factory automation system for component insertion on PCB 86−58134
failure analysis of pin plating solder process problems 86−58173
filmwork generation techniques for PCB manufacture 85−28799
filter medias for PC industry 86−1552
final rinsing, solvents 87−6267
fine line and space achievement 88−57098
fine line anisotropic etching using HNO_3 acid etchant 88−7153
fine line circuitry using solder mask over bare copper 87−24580
fine line imaging 87−53010
fine line inspection, automatic optical system shortcomings 88−25685
fine line PCB fabrication, surface prep. methods 88−64100
fine line PWBs, material shift control 88−32579
fine line resolution improvement with high intensity exposure 88−25693
fine line technology: impact of dry plasma processing 88−12843
fine line technology: the impact of dry plasma processing 88−1164
fine line wet processing technology 87−11231
fine line work, comparison of etchants 86−14654
fine line working conditions 87−60006
fine lining, problems and challenges 87−17504
fine-line, photographic films and their importance to the finished product 88−7202
fine-line, processing method for improving throughput, quality of PWB production masters 88−32611
fine-line imaging, conventional technology or laser direct imaging 87−6228
fine-line multilayer PCBs, automatic optical inspection assists process control 86−20936
fine-line PCBs, Cu etching process 88−7197
fine-line PCBs, how to evaluate developing and etching 88−7196
fine-line process optimization 85−11735
fine-line PWBs, improved solvent strippers 86−41449
fine-line work, etch control 87−11157
fine-pitch quad pack high-volume SMT assembly by automatic mfg. system at Gelzer Systems Co., Ohio 88−32652
fineline, cleanrooms in electronic production 87−53033
fixturing methods for improved testability 88−50504
flat bed screener for SMD and hybrid circuits *(German)* 88−50514
flat device support, development and appl. *(German)* 85−61554
flat package IC mounting machine with vision system 88−1158
flatpack aligner 86−35206
flatpack mounter for automatic assembly and soldering of PWBs 87−1082
flatpack surface mounting, IBM/Milton Ross carrier aligner/spreader 86−58135
flex and rigid-flex PWBs, lamination using vacuum press, equipment technology aspects 87−24572
flexible and flexi-rigid cct. boards, laminating in isostatic gas-pressure vacuum press 88−38886
flexible assembly, small batch production approach 88−50529
flexible assembly, soldering and testing of PC boards, using industrial robots *(German)* 86−1535
flexible assembly by robots appl., economic advantages 86−14756
flexible assembly station, features 85−11774
flexible assembly stations, materials handling system 85−11775
flexible automated assembly line, computer controlled, circuit board manufacture *(Italian)* 87−72810
flexible automated hybrid circuitry assembly system 86−67599
flexible automatic assembly/inspection, turnkey system 85−6610

printed circuit manufacture continued
flexible cct. boards, construction and manufacture *(German)* 87−53012
flexible electronic assembly system 87−24612
flexible electronics assembling system, dual robot workcell 85−61579
flexible laser bar coding of PCBs 88−57082
flexible material handling systems for printed circuit manufacture 86−27722
flexible multilayer PC design/manufacture using CAD system and laser vapourisation 85−28789
flexible PCB assembly line *(Japanese)* 87−66759
flexible PCB production, precautions *(German)* 87−73894
flexible PCs, design considerations and manufacturing 85−40366
flexible PCs, pin block assembly using surface mount techniques 86−58137
flexible protective coatings for printed circuits *(Italian)* 87−66748
flexible robotic cell for PCB assembly 87−53040
flexible robotic-based test cells 88−38890
flexible SMT manufacturing using integrated batch soldering system *(German)* 87−66751
flexible surface mounting PCB assembly system, AVIC-7800, features 87−52998
flux evaluation criteria for rosin andsynthetic-activated formulations 86−57514
flux selection for PWB wavesoldering 88−32589
fluxless fusion process for PCBs 85−40362
fluxless SMD soldering 85−28795
fluxless soldering of ceramic dual-inline packages, military appls. 87−37743
flying spot laser scanner for PCB inspection 87−11246
FMS construction for electronic assembly 87−45446
FMS for PCB production 87−24608
FMS for printed board assemblies, simulation 88−32656
foil-pinned module surface mounting technique 86−8599
for higher yield: test or inspect bare PCBs? 87−53021
FR-4 grade laminate improvement for PCBs 88−12773
FR-4 PCB laminate metallic inclusions 88−25688
French printed circuit industry, economic and market aspects 88−64051
fully additive fabrication process for PWB 87−1085
fully additive plating with permanent additive resist 88−1166
fully automatic repair process for photoemulsionmasks 86−27729
fusing fluids, residues, moisture insulation 87−11207
future factory, technological trends and issues 85−55313
future of surface mount repair processes 88−19541
future of surface mount repair processes 88−25697
gantry type assembly robot NR-421 for PCB electronic parts handling *(Japanese)* 88−12784
generic workcells with automatic tool exchange, appl. 87−60013
glass etching baths, Si level determ. 85−61566
glass textolites for additive methods 87−6252
glass-epoxy laminate adhesion, compatible anaerobic polymer 86−27730
glass/ceramics/Cu system, improved metal paste comp. for corrosion elimination 85−23255
glass/epoxy PCBs, solder columns for surface mounting of leadless ceramic chip carriers 86−53201
gripper for PCB assembly, with parallel movement fingers 88−32657
Group Technology: a useful tool for printed circuit manufacturing 88−12822
hand tools necessary for PC manufacture 85−11759
hand-held computer based multilayer circuit packaging 87−10174
hands off process uses SMT for telephone manufacture 88−57079
heat dissipation use of BeO packages 86−41426
heated airknife technology will blow away the soldering blues 87−66740
heavy metal removal from printed circuit production wastewater 85−50105
HICLASS software system: a manufacturing expert system shell 88−50534
hierarchical interconnection technology 87−60002
hierarchical interconnection technology, cct. design and manufacture 88−38935
high density area array connectors, PCB surface mounting technique 87−6254
high density design 87−66758
high density multilayer printed wiring boards using UTCas the surface layer 85−55261
high density packaging by chip-on-board techniques 86−27721
high quality parts insertion, seeking machine to fit 86−47161
high-definition screen printing, stencil developments and appl. 87−24567
high-density, high yield PWB imaging with dry film photoresist 85−17962
high-density, problems with SMDs 87−37725
high-density PC manufacture using photographic resist exposure techniques *(German)* 88−1174
high-density PCBs, IC part mounting, automatic position detect. *(Japanese)* 86−35215
high-impact spraying for photoresist processing 87−60009
high-speed, how tolerable are board tolerances? 88−32569
high-speed acid Cu plating through chemistry 85−34349
high-speed Cu plating, anode area 86−20949
high-speed PCB manufacture 87−59991
high-speed/-density packaging, discrete wiring technologies for interconnections manufacture 87−24605
high-volume PCB cross-section sample prep. 86−27704
high-volume PCB cross-sectional analysis for plated-through hole boards 85−34314
high-volume vapour phase soldering of assemblies 87−11247
hobby techniques, summary of methods 88−32651
hole coating by laser-electrical method *(Russian)* 86−14686

hot air levelling for PC soldering, automatic equipment 86−20957
hot air levelling surface mount PWBs 88−12845
hot air levelling systems 87−37729
hot air solder leveling 88−25694
hot air solder levelling overview 88−32584
hot air solder levelling problems 88−32582
hot air solder levelling services evaluation 88−32583
hot lamination eliminates problems in backplane bonding 85−45304
hybrid circuit CAD 88−32566

printed circuit manufacture continued
hybrid ICs, automatic mounting and other advantages, recent appls. 85−6625
hybrid ICs, resists paste, materials research 86−20991
hybrid ICs and SMD for space application, European scenario 86−62975
IBM 7575/76 robots for flexible surface mounting assembly machines in electronic manufacture *(German)* 88−44456
IBM cards, Taiwanese manufacturers 85−17948
IBM Charlotte circuit card manufacture automation 88−12839
IBM Charlotte facility, automating a printed circuit card line 88−12774
IBM PCB factory-of-the-future, design using rapid modelling technique and simulation 88−57121
IC card, LSI interconnection method, packaging 88−25677
IC handlers in automated production, yield improvement 85−23236
IC insertion machine 88−57122
IC packaging technology, PCs, precious metals *(German)* 85−55302
ICL, printed hybrid technology 85−40322
ICL DAP, tracking of LSI chips and PCBs 85−18411
image analyser, Comparatronic 5124, product inspection appls. 85−44536
images anal., novel method 85−28802
imaging onto precision phototools, film selection and handling 87−45427
imaging technology trends in electronic manufacturing processes 88−57089
improved lead structure for surface mount components 87−24589
improved phototool line quality 85−34316
in search of the ultimate test strategy 87−6232
in-circuit testing process, optimisation 88−57088
in-line system for surface-mount assembly accepts large circuit boards 87−11166
in-line vapour phase soldering, fluid consumption characteristics and process economics 87−10154
INCA: an expert system for process planning in PCB assembly line 88−50533
incoming inspection criteria and test procedures 88−38925
independent PCB producer appls. 88−12842
industrial robots in PC manufacture *(German)* 87−32160
industrial SMT assembly 88−18492
infrared reflow soldering methods in PCB manufacture *(German)* 88−38906
injected moulded PWBs, appl. of thermoplastics 86−35196
injection moulded boards, dry additive process 86−27725
injection moulded polymers for substrate appls. 85−17975
injection-moulded thermoplastic PCBs 87−6262
injection-moulded thermoplastic PCBs, materials and processing considerations 88−19493
injection-moulded thermoplastic PWB fabrication 87−6239
innerlayer inspection automation using machine vision 85−55272
insertion, computer controlled, high performance variable-length message interface 85−61557
insertion and soldering of nonstandard parts in PCB assembly, using robots 87−45448
inspection, advanced vision technology appl. 86−1564
inspection, image correlation appl. for optical character recognition 85−34296
inspection, image processing appl. *(German)* 86−17850
inspection, imaging systems 85−55267
inspection, viewing time and magnification 88−25715
inspection and rework, paperless system 87−11182
inspection by machine vision, for high volume manufacture 86−13532
inspection using automated optical system 85−28803
inspection using automatic vision systems 86−14696
inspection using laser scanner 87−34981
integrated design techniques for IC and boards *(German)* 88−24871
integrated in-line PC board assembly 87−66736
integrated process control for circuit card manufacture problems within US manufacturing industry 88−57152
integrated robotic PCB assembly/automatic testing systems, feasibility 85−50112
integrating CAE with printed circuit design 88−57106
integration of polymer thick films with PCB technology in the telecommunication field 88−1180
intelligent robot workcells improve PCB assembly efficiency 85−34301
intelligent robots appl. 85−1155
intelligent vision controller for circuits card lead inspection 87−45436
interactive computer graphics system *(German)* 85−6591
interconnection costs of various substrates−the myth ofcheap wire 86−13504
interconnection of high pincount integratedcircuits 86−8646

JIT implementation−a case study 88−12814
JIT implementation in low-volume board shop, pilot project 88−25713
JIT manufacture, reducing manufacturing cycle times 87−11201
job-tracking system in PCB industry 86−27736
jumper wire insertion, computer-aided system reducing production time 86−1511
just-in-time manufacturing 86−67592
Just-In-Time method appl. 88−57153
just-in-time production of VLSI circuit boards, test process management 88−70127
keeping phototools picture perfect 87−45408
Kollmorgen EE-1 process for PCB PTH form. 87−53001
LamCore metal-core boards for naval fire control system 87−17509

printed circuit manufacture continued
laminate drilling, thermal monitoring of drill bits, IR radiometry techniques 87−24570
laminate manufacturing, release sheets 85−40358
laminate materials, trends and expectations 85−34298
laminate reinforcement materials for multilayer board fabrication, dimensional stability meas. 87−6261
laminate specification guide 86−1514
laminated PWBs, Blackhole process for plated hole preparation 87−11232
laminates and drilling 85−6595
laminates in PCB manufacture 85−23228
laminates support technology advances while offering alternate choices 85−11756
lamp IR reflow soldering of surface mount devices 87−37744
large plotted circuit board production, delay lines for particle calorimeter 87−11187
large scale interconnects for aerospace appl. 88−24557
laser artwork generation 85−40347
laser beam PCB direct imaging 88−57094
laser direct imaging, one-step automated process for pattern transfer 87−59993
laser direct imaging technology 86−41448
laser direct photoplotting without aperture wheels 85−40319
laser drilling of small holes 85−17967
laser drilling of very small electronic via holes in common circuit board materials 88−38884
laser exposure for PC-board production, computerised system *(German)* 85−23251
laser facilities for PCB production *(Russian)* 86−47182
laser imaging PWB 87−11162
laser inspection thermal signature anal. of electrical solder connections 88−11791
laser microsoldering for PWBs 85−11761
laser photoplotters require high-precision film 87−66731
laser photoplotting as an integral part of CIM 87−37722
laser photoplotting technology 88−7185
laser printer, automated board handling and insertion by robotic device 86−8605
laser printing device developments and applics. 85−56888
laser reflow soldering of ribbon leaded devices onto PWBs reliability and cost considerations 87−11227
laser scanner application to printed circuit board production 85−35933
laser solder joint inspection process development, engineering management perspective 88−12830
laser soldering for flat package IC manufacture 88−57126
laser soldering process for PCB assembly *(Italian)* 88−50515
laser TAG, digital data imaging for PCBs 87−60005
laser technology in printed assembly plate production 86−22587
laser trimming systems for hybrids and PCs 85−29957
laser-enhanced anodisation and cutting of valve-type metals, PCB manufacture appl. 86−40516
lasers in electronic manufacturing 88−27349
layout, CAD appls. *(Dutch)* 87−52280
layout CAD, interactive CADVANCE 1000 system, software package *(Japanese)* 85−17955
layout CAD design optimisation for manufacturability and reliability 88−1108
layout CAD using Calay systems hardware automation 86−20970
layout for automatic component insertion 87−73881
lead finishes and solderability of surface mount components 88−37957
lead frame materials for plastic packages 86−46103
lead trimming modifications solve PWB assembly problems 88−32616
lead wire trimming, blade life improvement 86−1520
leadless chip carriers, design, characts. and board assembly for severe environments 87−36509
leadless chip carriers, direct attachment to PWB materials 85−33192
leadless component placement technology, advances 85−34359
leadless components, soldering to printed boards, drawbridging phenomenon study *(Chinese)* 87−73909
line scan vision system for PCB assemblies inspection 87−23372
liquid coating systems 88−71195
liquid epoxy photopolymer 86−58161
liquid photoimageable solder masks 88−38896
liquid photoimageables, solder masks for PCBs 88−12789
liquid photoresists for fine line imaging 88−25692
LISP-based heuristic scheduler for automatic insertion in electronics assembly 87−11183
loaded PCB inspection using machine vision 85−55271
Lomerson direct metalizing technology 87−11205
loudspeaker mounting on PCB, snap-in technique for automated assembly methods 86−41439
low cost options for surface mount production 88−1163
low-permittivity expanded PTFE composit laminate spurs high-speed digital processing 87−53020
low-waste technology for final PCB etching 88−12770
LSI circuit packaging, PCB production process improvements 86−14712
machine vision, automated manufacturing tools, appls. 87−1092
machine vision for accurate mil-scale meas., techniques 86−53197
machine vision for SMD in-process inspection appl. 87−11191
machine vision guides assembly operations for surface mount technology 85−11752
machine vision with fibre optic lighting, PCB inspection 86−15508
machining multilayer circuit board 85−11742
Macintosh manufacturing facility automation 85−49334
managing the printed circuit board design process 86−57560
Manhattan effect surface mount phenomena *(Swedish)* 88−57051
manual and automated PCB assembly, time comparison 87−32155
manufacturing automation management, search for excellence 88−37942
manufacturing defect analyzers improve ATE investment returns 88−39553
MAP LAN for PC manufacture at ICL Kidsgrove 87−62705
marking of components, boards, and packages 88−57087
mass lamination expands the options of multilayer fabricators 85−11757
master drawing, handmaking vs. machine making *(Hungarian)* 85−1170
materials for PCB manufacture 87−6251
materials handling accessories govern production efficiency 85−11751
materials handling process 87−37693
medium vol. shop automation 88−38921
menu-driven, turnkey flexible inspection system appl. 86−47198
Merlin, advanced printed circuit board manufacturing system for the ICL Level 30 system 86−14685

printed circuit manufacture continued
metal cored multilayer boards for SMDs 87−59982
metal electrode facebonding (MELF) component mounting system, development 86−1554
metalised film flex circuits manufacture using magnetron sputtering 87−6249
metalizing through-hole interconnections 88−12764
metallic etch resists, advantages and disadvantages for PCB manufacture 87−6266
metallisation technique using liquid polymer ink *(French)* 85−11779
metallizing, developing a cleaner-conditioner for electroless copper 88−64097
micro drilling tool selection 86−1512
micro solder joints, creep and fatigue testing 85−17965

multifunctional packaging applications of moulded PCBs 87−11211
multilater PWB fabrication, vacuum systems, overview 86−58129
multilayer, direct X-ray targets for dimens. stability anal. of signal planes 86−35203
multilayer, drilling 85−23248
multilayer, laser-drilled blind vias increase PCB real estate 87−53017
multilayer, philosophies of mass lamination 86−8618
multilayer, printed hybrid technology 86−8620
multilayer, red and black oxide coatings for improved multilayerbonding 86−8619
multilayer, testability considerations for bareboard innerlayertesting 86−8621
multilayer and double sided boards, chem. plating considerations 85−61542
multilayer board design, modification for accepting SMT 87−17480
multilayer board fabrication, oxide coating of Cu foils 86−41420
multilayer board fabrication, oxide treatment using spray 87−45434
multilayer board manufacture, mech. drilling 86−41421
multilayer board technology, developments for PCB production improvement 87−37691
multilayer boards, desmear processes 88−25669
multilayer boards, dimens. stability meas. technique 86−62941
multilayer boards, dry etch technology using NF_3 88−64107
multilayer boards, high aspect ratio, Cu plating requirements 87−37726
multilayer boards, smear removal techniques: pros and cons 86−8617
multilayer boards, yield improvement using vac. technology 87−24579
multilayer boards using PTF technology 88−12762
multilayer boards with Cu-clad invar substrates, thermal efficiency 86−8629
multilayer bonding with strength 87−53016
multilayer cct. board production, fully additive technique *(German)* 87−66742
multilayer ccts., laminated and preimpregnated materials for standard manufacturing processes *(Italian)* 88−19519
multilayer ceramic chip mounting guide 86−8583
multilayer circuit boards, embedded conductor struct. fabrication process 85−28813
multilayer circuit boards machining, hole drilling techniques 85−17968
multilayer circuit manufacture, prod. and quality control assurances *(German)* 88−50523
multilayer circuit via hole formation, resist process for improved photo throughput 86−8653
multilayer high density PWBs with leadless ceramic chip carriers, construction using Cu/Invar/Cu 87−11230
multilayer laminate construction methods 88−32646

printed circuit manufacture continued
multilayer laminates, interrelationship of chemistry and laminates 85−61571
multilayer lamination 86−41416
multilayer lamination, X-rays go on line at predrill tooling 87−53052
multilayer lamination methods and construction 86−62938
multilayer lamination overview 86−62939
multilayer lamination process, in-situ method to monitor resin flow 87−17515
multilayer manufacturing tips 86−8613
multilayer mass lamination QC inspection plan 88−7190
multilayer PC board production, using surface mounted device technology *(German)* 86−17246
multilayer PC board with blind via hole design and manufacturing process 85−34271
multilayer PC boards, changes in microsectioning requirements 85−23264
multilayer PC cards, production and jointly processing base laminates 85−45324
multilayer PC factory in Bavaria *(Dutch)* 87−17511
multilayer PC manufacture, thermal anal. as production testing tool *(French)* 85−10469
multilayer PC manufacture, thermal charact. of epoxide resins 86−14682
multilayer PCB automatic optical inspection system purchase planning 88−25684
multilayer PCB for SMD, low thermal expansion *(German)* 87−37655
multilayer PCB hole processing, desmear/etchback methods compared 85−61564
multilayer PCB inner layers, resin removal by plasma desmearing 85−28806
multilayer PCB innerlayer production automation 85−40357
multilayer PCB manufacture, Al clad drill backing, contamination of PTH 86−53176
multilayer PCB manufacture, polymeric residue removal by plasma desmearing 87−11175
multilayer PCB manufacture, prepreg and laminate QC, thermochem. anal. 86−1501
multilayer PCB microsectioning, automation advantages 86−20928
multilayer PCB plating-line, computer-aided, process engineering 86−62933
multilayer PCB quality improvement by vacuum laminating 86−1500
multilayer PCB quality production 85−61546
multilayer PCB testing of inner layers 86−58128
multilayer PCBs, desmear/etchback using alkaline permanganate 88−7192
multilayer PCBs, differential scanning calorimetry of prepregs 87−53055
multilayer PCBs, engineering change orders 86−8630
multilayer PCBs, immersion wave soldering at IBM, water soluble flux, process monitoring 86−58148
multilayer PCBs, low pressure lamination 88−7191
multilayer PCBs, use of laser photo-plotters for artwork generation 87−37685
multilayer PCBs, vacuum lamination using a hydraulic press 87−11204
multilayer planar PCB assembling 87−6255
multilayer polyimide PCB containing integral copper/Invar composite planes, thermal expansion 85−40318
multilayer polyimide PWBs, dimensional change during lamination 86−27702
multilayer processes and materials review 88−50501
multilayer PTH coupons, automatic microsectioning 88−7193
multilayer PWB, screen printing manufacturing process from GEC *(Dutch)* 85−50100
multilayer PWB fabrication, CIM system implementation 88−32594
multilayer PWB production, etch back technology, testing by raster electron microscope *(Hungarian)* 88−12780
multilayer PWBs, epoxy and polyimide, fabrication using Cu-Invar-Cu foils 87−6259
multilayer PWBs, high quality, critical aspects of manufacture 88−1124
multilayer PWBs, plating chemistry selection and control 86−1518
multilayer PWBs, X-ray template 87−53047
multilayer registration: simple to sophisticated 86−62942
multilayer registration systems 88−7189
multilayer registration tooling 88−7188
multilayer registration tooling 88−12847
multilayered PCB, high-density, using fine-wiring process 87−45425
multiple board manufacturing, advantages of shearing for depaneling 87−11176
multivision and robot cell concept appl. 88−57133
multiwire boards and SMT 86−47185

surface mounted printed board assemblies, cleanliness considerations *(Swedish)* 86−8634
surface mounted technology, vapour phase reflow soldering 85−40320
surface mounted technology using PETP connectors and vapour phase soldering *(French)* 86−14695
surface mounting, adhesives for handling or soldering 85−61547
surface mounting, chip-and-wire technology 86−14661
surface mounting, integrity of solder joints as a function of reflowtemperature 87−6274
surface mounting, solder paste selection 85−55279
surface mounting, soldering for present and future 85−55278
surface mounting, technique and equipment *(Italian)* 85−1162
surface mounting adhesives 85−61555
surface mounting adhesives 85−23229
surface mounting and fine line boards 85−11744

printed circuit manufacture continued
surface mounting and soldering procedures *(French)* 87−6270
surface mounting assembly, electronic components 85−34324
surface mounting assembly and package miniaturisation for increased density 85−17985
surface mounting common problems and related solutions 87−11197
surface mounting component placement problems 86−47171
surface mounting design and application considerations 86−58166
surface mounting of chip carriers to PCBs, soldering techniques and thermal cycling tests *(Swedish)* 86−8633
surface mounting of chip components, adhesive technology and appl. *(Italian)* 88−1154
surface mounting of components, selection and characts. of adhesives 85−11776
surface mounting of components on PCBS, screen printing techniques *(French)* 86−27720
surface mounting of discrete components 86−14714
surface mounting of electronic components, substrates and resins *(Swedish)* 85−6597
surface mounting on elastomer coated substrates 85−40345
surface mounting on PCB, connector/PCB interface key to success 86−53205
surface mounting process, automatic component attachment and standardisation aspects *(Italian)* 86−20940
surface mounting technique to fasten power transistor and heatsink to PCB 87−1083
surface mounting technology 86−1529
surface mounting technology, advantages and challenges 85−17979
surface mounting technology, advantages and outline *(German)* 87−37718
surface mounting technology, evaluation of adhesives 85−22251
surface mounting technology at Thomson DCIP *(Dutch)* 85−50099
surface prep. for dry film photoresist lamination 88−64103
surface preparation methods comparison 88−64098
surface reflow soldering technique, one shot process for double-sided boards 88−1183
surface treatment of single-face printed circuits *(Italian)* 85−17983
surface wiring task, performance comparison between laboratory and plant subjects 87−23334
surface-mount boards soldering, hot-air leveling for improved solderability 86−53171
surface-mount design requires production know-how 86−20923
surface-mount device production, flexible inspection systems appl. 86−27739
surface-mount technology, development of automated prod. 86−8590
surface-mount technology, reflow soldering with vapor phase and infrared: a comparison 85−34362
surface-mountable modules, deformed pin arrangement for improved PC card/board attachment 85−45326
surface-mounted assembly, UK industry, development in 1985, techniques 85−23235
surface-mounted components, removal and replacement 86−47166
surface-mounted components, wavesoldering and cleaning 85−34363
surface-mounted device replacement 85−34299
surface-mounted devices in printed circuit boardassembly 86−14666
surface-mounted devices testing 86−35217
surfactant flux−a new flux for the ozone age 88−50518
Svecia Setup Assistant expert system for SMT board screen-printing 88−32670
System 842, turnkey system for SMT assembly 87−17531
systematic approach to machine soldering qualityimprovement 86−58171
systems cost modelling and simulation tools 88−25679
systems integration in PCB manufacture 88−71244
TAB, use in SMT for packaging density improvement 88−11771
tab connector plating, rack and automatic plating lines 85−17973
TAB for SMDs, layout design rules, lead bonding, reliability and quality assurance *(Chinese)* 87−73910
TAB leads as COB format 88−12769
tab plating equipment development 87−66723
TAB technology tackles high density interconnections 85−40332
tactile-sensing gripper end-of-arm-tooling 86−41438
tap automated bonding *(Swedish)* 88−1156
TEC 200 plastic film for home PCB production 86−14694
technical training programme 86−27738
technological advances, appls. of lasers and new resists and substrates 85−17980
technological developments over next five years 87−6238
Teflon/glass high-speed substrate for the Cyber 205 supercomputer 85−1154
Tektronix PCB manufacturing plant 85−50104
telecommunication equipment manufacture, impact of SMT on factory automation, economic aspects 88−152
telephone equipment PCB assembly by robot at Northern Telecom, Ontario, Canada 88−28549
telephone system digital switches, PCB assembly 86−41450
temporary solder masks for wavesoldering 85−11762
test strategies for maximising throughput 85−34342
testability implementation at large company 86−35219
testing station using industrial robot for improved quality 87−11192
thermal analysis techniques 85−1175
thermal design problems solving 86−58132
thermal design program for circuit board assembly, TMOD *(Swedish)* 86−41452
thermal management of discrete SMT devices 86−47195
thermo-mechanical component-removal machine for PCB desoldering appls. 87−1077
thermoplastic and metal-core substrates 85−40359
thermoplastic PCB, injection-moulded, using additive process 86−53172
thermoplastic PCB manufacture 85−23218
thermoplastic PCB substrates for packaging engineers 85−55289
thermoplastic substrates 86−27711
thermoplastic substrates, molded cct. interconnects 88−38920
thermoset resin systems for elec. laminates, characts., PCB fabrication appls. 88−19548
thermoset resin systems for electrical laminates, new high performance 88−12803
thermosonic bonds, technology and development mechanism *(Hungarian)* 85−45341
thick liquid photoresist for improving image and platingresolution 86−58142
thin film production methods in Sweden *(Swedish)* 86−8595

printed circuit manufacture continued
thin-wire hookup technique, appl. in radioelectronic component assemblies 87−66747
three-dimensional circuitry on moulded substrates, transfer process 85−40333
three-dimensional moulded interconnection processes and markets 88−32620
three-dimensional moulding process 87−66729
through hole component insertion technology, current trends 87−6244
through hole component insertion technology trends 87−1068
through hole conductor plates and multilayer circuits manufacture *(German)* 88−25674
through hole plating, outgassing and multilayer technology 85−61568
through plated PCB, prep. for quality control in production process *(German, English)* 87−37724
through-hole component inserters 88−38905
through-hole electronic component insertion, flexible robotic system at Xerox, California 88−71223
through-hole fabrication using plasma etching, electrode config. 86−1542
through-hole PCBs, machine vision system to detect missing components prior to soldering 88−25709
through-hole plating acid Cu bath optimal design by box method 86−53187
throughhole plating using Cu sputter process 85−23259
throwing power, effect of diffusion layer 88−12802
Timex automated assembly plant for consumer electronics 87−16356
